CHANGES IN THE DISTRIBUTION OF ALASKA'S COMMERCIAL FISHERIES ENTRY PERMITS, 1975-2013

CFEC Report 14-2N

Alaska Commercial Fisheries Entry Commission
8800 Glacier Highway Suite 109
P.O. Box 110302
Juneau, Alaska 99811-0302
(907) 789-6160

ABSTRACT

This report provides detailed information on changes in the distribution of permanent entry permits in Alaska's limited fisheries. From 1975 through 2013, 79 permit types have been issued in 65 limited fisheries. The report provides both statewide and fishery-specific data on the number of permit transfers, the geographic distribution of permit holders, changes due to permit transfers, changes due to the relocation of permit holders and the year-end 2013 geographic distribution of permit holders.

The report also includes extensive information on the age of permit holders, age differences between transferors and transfer recipients, the incidence of intra-family and business partner transfers, transfer acquisition methods, and financing of permit purchases. The information contained in the report is derived from the Commercial Fisheries Entry Commission's permit and transfer survey files.

The report is published as two separate documents: an executive summary and the principal report, which is primarily a reference document.

I. INTRODUCTION

I. INTRODUCTION

In 1973, the Alaska State Legislature enacted Alaska's Limited Entry Act (AS 16.43) for commercial fisheries. The Act established a new agency, the Commercial Fisheries Entry Commission (CFEC), to administer a program regulating entry into commercial fisheries under state jurisdiction. Limited entry was implemented in most of the salmon fisheries in 1974. By the end of 2013, permanent limited entry permits have been issued in 65 commercial fisheries[1]: 26 salmon fisheries, 19 herring fisheries, 9 crab fisheries, 5 sablefish fisheries, 3 shrimp fisheries and 3 dive fisheries (sea urchin, sea cucumber, and geoduck). In some limited fisheries, more than one type of permit was issued to help contain increases in fishing power. Some permits constrain the amount of gear that can be used while others constrain the length of the vessel. In some limited fisheries, non-severable[2] permits were issued that combine permissible gear types while other permits combine harvestable species. To date, a total of 79 permit types have been issued in the 65 limited fisheries.

> *As a food source important to Alaskans and the world, Alaska's fisheries are one of its most important renewable resources. Sound management of its fisheries is crucial to the State of Alaska, and limited entry is an important part of the State's comprehensive management system.*
>
> *A limited entry permit is the critical element of the system and legally required tool of trade for an Alaska fisherman. As a privilege subject to revocation by the State, the permit provides a meaningful incentive to comply with conservation laws. As a transferable privilege, the permit provides (1) a sufficiently long-term interest to encourage both conservation and enhancement of the resource, (2) a means to ensure continued fishing access for the fisherman and those dependent upon him.*
>
> *CFEC Chairman Bruce Twomley*

A legal prerequisite of the Limited Entry Act was that permits could not be locked in the hands of those who were originally issued them (i.e., the 'initial issuees'). After much study and debate, the legislature chose free transferability as the method for allowing permit holders to enter and exit the fisheries.

Free transferability allows the transfer of permits from parents to their children and allows a family member to inherit a permit upon the death of a permit holder, as well as sale of permits on the open market. It allows fishermen to enter and exit fisheries at times opportune to them, and it eliminates the need for an expensive and time-consuming bureaucratic process to handle permit reallocation. Many other transfer options were considered but were found lacking with respect to these criteria.

In 1983, the Alaska Supreme Court ruled on the *State of Alaska v. Ostrosky*,[3] which challenged the constitutionality of the Limited Entry Act, particularly the free transferability provisions. The court

[1] By the end of 2013, maximum number regulations had been adopted for 66 fisheries. No permanent entry permits have been issued in the Prince William Sound sablefish pot gear fishery, and therefore the fishery does not appear in this report. In addition, 2 fisheries under a vessel limited entry program are not reported herein.
[2] Non-severable integrated permits were first issued in the Kodiak roe herring purse seine and gillnet fishery. Non-severable means that the two gear types incorporated in the permit type are inseparable and cannot be sold separately. This was used as means of limiting effort at initial limitation for individuals who qualified under two separate gear types. If the permit had been severable, the individual who qualified under both gear types could have sold the use access conveyed under the gillnet gear and continued to fish using seine gear. Thus, two individuals fishing two different types of gear would have resulted had a severable permit been issued (Muse and Schelle, 1989).
[3] *State of Alaska v. Ostrosky*, 667 P.2d 1184 (1983).

upheld the constitutionality of both the Act and of free transferability and also affirmed the legislative objectives in adopting the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the Ostrosky appeal in *Ostrosky v State.* [4]

Despite the benefits of free transferability, many persons remain concerned that permit transfers might result in undesirable consequences with regard to the distribution of permits. There is a concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are local to a limited fishery, thereby eroding a traditional economic base. The legislature has twice ordered studies of transferability options, first upon initial passage of the Act, [5] and again in 1980.[6]

Because of concerns about free transferability, CFEC has produced this report so that the legislature, the administration, and other interested parties will be kept accurately apprised of the facts.

This edition covers the 65 limited fisheries for which permanent permits have been issued in the period 1975 – 2013. It contains detailed information on transfer incidence, the initial geographic distribution of permit holders, changes in the distribution of permits due to permanent transfers of permits and migration of permit holders, and the year-end 2013 geographic distribution of permit holders. Extensive information is also provided on the age distribution of permit holders, age differences between transferors and transfer recipients, rates and characteristics of intra-family and business partner transfers, permit market values and permit acquisition and financing methods.

II. TRANSFER INCIDENCE

II. TRANSFER INCIDENCE

During the period from 1975 through 2013, 16,565 limited entry permits were issued in 65 limited entry fisheries. However, not all permits are available for transfer. AS 16.43.2500 requires that CFEC develop hardship ranking systems, often called "point systems", to allocate permits, and to determine point levels at which a person would experience only minor economic hardship if excluded from an initial permit allocation. Permanent permits issued to persons classified at minor economic hardship level are non-transferable.

Note that initial issuance refers to the issuance of a new permit whenever it occurred. Some permits for a fishery may be initially issued several years after the main body of permits has been issued. This is because some applicants are difficult to classify under a hardship ranking system, and a final determination of their standing may come only after an extensive hearing and adjudication process. In other cases, permits have been issued at a later date as the result of lawsuits brought against CFEC.

Of the 16,565 permits issued in the 1975 – 2013 time period, 14,189 permits were fully transferable and 2,376 were non-transferable. By the end of 2013 there was a total of 14,205 permits. Of this total, 13,462 are transferable and 743 are non-transferable. The net reduction of 727 transferable permits is due to the cancellation of 857 transferable permits and the net addition of 130 permits that were converted from non-transferable to transferable status through the CFEC adjudication process. The net reduction of 1,633 non-transferable permits is due to the cancellation of 1,503 non-transferable permits and the net conversion of 130 non-transferable permits to transferable status through the CFEC adjudication process.

During the 1975 – 2013 period there were 39,659 permanent permit transfers. Original permit holders (initial issuees) transferred 12,062 permits, indicating that approximately 85% (12,062/14,189) of all transferable permits have changed hands at least once by the end of 2013.

Two types of annual transfer rates are shown in Table 2-1. The first type is the ratio of the permits transferred for the first time (i.e., from initial issuees) to the number of transferable permits. If no new permits were issued, this ratio would decline over time because each year there would be fewer permits still held by initial issuees. As expected, this transfer ratio has declined from 8.4% in 1975 to 0.8% in 2013. Over the entire time period of limited entry (1975-2013) the average annual ratio of transfers from initial issuees to transferable permits is 2.6%.

The second type of annual transfer rate reported in Table 2-1 is the ratio of all transfers to the sum of all available transferable permits. This provides a measure of the annual turnover rate for transferable permits. This turnover ratio has varied from a low of 5.8% in 2002 and a high of 13.3% in 1978. Over the entire time period of limited entry (1975-2013) the ratio of transfers to transferable permits averages 8.4%.

Turnover Ratios by Permit Type, 1975 – 2013

In Table 2-2, permit types were divided into groups based upon the year(s) in which they were limited. A summary of transfer ratios is provided for each group. The first group consists of the original 19 salmon permit types for which permanent permits were first issued in 1975. The second group consists of the 6 Arctic-Yukon-Kuskokwim (AYK) salmon permit types for which permanent permits were first issued in 1976. The remaining limited herring, roe herring, shellfish, dive and sablefish permit types are also grouped by years of limitation. These permit type groupings appear in tables throughout this report.

The sum of annual permit counts represents the number of transferable permits at the end of each year, summed over the entire period (1975-2013). The summations are used to express rates of permit transfers, by fishery. The rates can be compared to the all-years statewide summary rates presented in Table 2-1 to evaluate the relative turnover rate of individual fisheries.

Two measures of average annual transfer rates for individual permit types are shown in Table 2-2. The first transfer rate is calculated by dividing the cumulative total transfers from initial issuees in the fishery (1975-2013 time period), by the sum of annual transferable permit counts over the same time period. The permit types limited in the most recent years have the highest rates of transfers from initial issuees, but this rate is expected to decline over time because each year there will be fewer initial issuees remaining in the permit type.

The second transfer rate is calculated by dividing all permanent transfers over the time period (1975-2013) by the sum of annual transferable permit counts over the same period. These transfer rates vary considerably by permit type.

The annual transfer rate within a permit type may vary considerably from year to year. This is demonstrated in Appendix B where the number of transferable permits, the number of transfers, and the transfer rates for each year are presented for individual permit types.

Table 2 - 1. Permit Transfer Activity on Permanent Permits by Year

Year	Permit Types	Number of Permanent Permits	Number of Transferable Permits	Annual Number of Transfers From Initial Issuees	Ratio of Transfers From Initial Issuees to Transferable Permits	Total Annual Number of Transfers	Ratio of Transfers to Transferable Permits

Total	*78*	*14,205*	*470,795*	*12,062*	*2.6%*	*39,659*	*8.4%*

Notes:

- 2,619 permits have been cancelled. Except for 259 cancelled permits that were subsequently reinstated, cancelled permits are excluded from the year of cancellation forward.
- 857 transferable permits have been cancelled, and 130 transferable permits have been added through conversion from nontransferable to transferable status through the CFEC adjudication process.
- The number of transfers includes 345 loan foreclosures by the Department of Commerce, Community, and Economic Development or by the Commercial Fishing and Agriculture Bank, along with 340 subsequent transfers from these entities.

- The sum of annual permit counts is the total number of permits at the end of each year, summed over the entire period.
- The number of transfers includes permit foreclosures and subsequent transfers of these permits.

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

The effects of permit transfers (change of permit holder) and migration of permit holders (permit holder changes place of residence) are examined in this portion of the report. Statewide and fishery-specific information are provided.

Classification of Permits

Limited entry permits are allocated based upon an individual's past participation and economic dependence on the fishery. To allocate permits among qualified applicants, CFEC develops hardship rankings, or "point systems" that measure each individual's relative position in the fishery. The Limited Entry Act also requires CFEC to determine levels within the point system where persons would experience only "minor economic hardship" if excluded from an initial permit allocation. Persons who receive permanent limited entry permits and who are ranked at or below the minor economic hardship level receive non-transferable permits, while persons who are ranked above the minor economic hardship level receive transferable permits.

In total, 16,565 permanent limited entry permits have been issued through year-end 2013. 14,189 transferable permits have been issued to persons ranked above the minor economic hardship level (85.7%) and 2,376 non-transferable permits have been issued to persons ranked at or below the minor economic hardship level (14.3%).

In most fisheries, the majority of permits issued came as transferable permits to persons ranked above the minor economic hardship level. There are 10 fisheries where a majority (over 50%) of the permits were issued as non-transferable permits. In 4 of these fisheries, all permits issued were non-transferable permits: the Southeast Dungeness crab ring net fishery (8 non-transferable permits/8 total); the Southeast Dungeness crab dive fishery (3 non-transferable permits/3 total); the Cook Inlet Dungeness crab ring net fishery (1 non-transferable/ 1 total); and the Southeast shrimp otter trawl fishery (1 non-transferable permit/1 total). In 3 of the fisheries, half of the initially issued permits were non-transferable: the Southeast shrimp pot gear fishery (157 non-transferable/312 total); the Southeast brown king crab pot fishery (5 non-transferable/10 total permits); and the Kodiak roe herring seine and gillnet (1 non-transferable/2 total permits). In the remaining 3 fisheries, the majority of permits issued were non-transferable: the statewide salmon hand troll fishery (1,457 non-transferable permits/2,162 total permits); the Southeast geoduck clam dive fishery (62 non-transferable permits/112 total permits); and the Southeast sea cucumber dive fishery (233 non-transferable/389 total permits).

Classification of Permit Holders

This report measures changes in permit distribution by classifying permit holders based upon where they reside. Langdon[1], was the first to divide permit holders who were residents of Alaska into those who resided in places that were 'local' and those that were 'nonlocal' to the permit type. He further defined Alaskan places as 'rural' or 'urban'. Non-Alaskan permit holders were grouped as a single 'nonresident' category. Langdon's conceptual categories are a useful way to examine the geographic distribution of permits. The resident types used in this report are:

[1] Langdon, S. "Transfer Patterns in Alaskan Limited Fisheries" January 17, 1980.

- **ARL**: *Alaska* resident of a ***Rural*** community which is ***Local*** to the fishery for which the permit applies;

- **ARN**: *Alaska* resident of a ***Rural*** community which is ***Nonlocal*** to the fishery for which the permit applies;

- **AUL**: *Alaska* resident of an ***Urban*** community which is ***Local*** to the fishery for which the permit applies;

- **AUN**: *Alaska* resident of an ***Urban*** community which is ***Nonlocal*** to the fishery for which the permit applies;

- **NR**: ***Nonresident*** of Alaska.

- **DCCED / CFAB**: Signifies permits that have been foreclosed upon by the Alaska Department of Commerce, Community, and Economic Development (DCCED), or by the Commercial Fishing and Agriculture Bank (CFAB), and have yet to be transferred.

An example of how this classification works could be a permit holder who lives in Dillingham and holds two limited entry permits. If one permit is for the Bristol Bay drift gillnet fishery, it will be classified as a permit held by an Alaska Rural Local (ARL) because Dillingham is a rural community and is local to Bristol Bay. If the other permit is for the Cook Inlet herring seine fishery, then that permit will be classified as one held by an Alaska Rural Nonlocal (ARN) because Dillingham is rural, but not local to Cook Inlet.

Urban and rural designations in this publication are based upon information from U.S. Census 2010. Because editions of this report prior to 2012 used Census 2000 criteria, some changes have occurred in the rural/urban designations.[2] In general, there are now more Alaska places designated as rural, and consequently more permits issued to persons classified as rural residents. For more detailed information concerning urban and rural classification rules, please see Appendix A.

The local/nonlocal distinctions are generally based on the regulatory boundaries of each fishery. The Upper and Lower Yukon and Kuskokwim River fishery areas are based on their immediate river drainages. The Bristol Bay area extends inland up the Nushagak River and includes Lake Iliamna, Lake Clark and the Tikchik Lake system. For a complete description of the local/nonlocal decision rules, please see Appendix A.

Resident type classifications prior to 1978 were based on the address information provided to CFEC during the issuance, renewal, and transfer of permits. Some nonresident applicants used an Alaska address, and were consequently classified as residents. After 1978, in an effort to improve the accuracy of CFEC residency data, permit renewal and transfer forms included a sworn declaration of residency. In addition, permit holders claiming Alaska residency were required to provide a valid

[2] The 2004-2012 editions of this report used Census 2000 criteria to designate rural and urban classifications. Rural and urban classifications for the 1991-2003 editions used Census 1990 population figures and the 1983 – 1990 editions used Census 1980 figures.

Alaska address. Before 1982, permit renewal forms included space for only one address. The address listed may have been a temporary mailing address near the fishing grounds. As a result, a number of fishermen could have been misclassified as local to the permit type. The first edition of this report (1983) estimated the percentage of transfers involving permit holders who used an 'in care of' address at 2%. Since that time, there have been major permit file data corrections which included replacing temporary mailing addresses with permanent addresses. This suggests that the number of misclassified fishermen is relatively small. Beginning in 1982, permit renewal forms included space for both a permanent and a temporary mailing address. For this report, Alaska residency was assigned using the year-end sworn declaration of residency for the permit holder.

Changes in the Distribution of Permits

The number of permits in each resident type can change for three reasons:

1. **Transfer**: permits can be transferred (either by gift, sale, or trade) to other resident types.

2. **Migration**: a permit holder can move from one location to another. Migrations have changed the resident/nonresident balance to a greater degree than permit transfers.

3. **Cancellation**: permanent permits can be cancelled, usually when a person who holds a non-transferable permit fails to renew the permit for two consecutive years or passes away. Other reasons for cancellation are discussed in more detail in the next section.

When the net effects of cancellation, transfers, and migrations are combined, Alaska residents held 10,918 permits at the end of 2013 (76.9% of the total, including five permits held by DCCED or CFAB). Nonresidents held 3,287 permits (23.1%).

Permit Transfer

To examine the geographic changes in permit distribution attributed to transfer activity, transfers have been divided into two groups:

1. **Intra-Cohort Transfers**: transfers between permit holders of the same resident type. Intra-cohort transfers do not change the distribution of permits between resident types.

2. **Cross-Cohort Transfers**: transfers between persons of different resident types. Cross-cohort transfers result in a change in the distribution of permits between resident types.

Permit Migration

Decreases in the number of permits held by Alaska residents are countered by increases in the number of nonresident permits. Migrations, which refer to the relocation of permit holders, have changed the resident/nonresident balance to a greater degree than permit transfers. By the end of 2013, the net result of permit transfer activity had decreased the number of permits held by nonresidents by 306 permits, whereas permit holders moving into and out of Alaska resulted in a net increase of 1,042 permits held by nonresidents.

Permit Cancellation

By the end of 2013, the total number of permits decreased to 14,205 due to the cancellation of 2,360 permits. Of the 2,360 cancelled permits, 1,880 were held by Alaskan residents and 480 were held by nonresidents. Note that at year-end 2013, 5 permits had been foreclosed upon by DCCED or CFAB and had yet to be transferred back to individuals.

Cancellation most often occurs on non-transferable permits when a permit holder dies. Cancellation can also occur when the permit holder does not renew a permit for two consecutive years. In this report, the number of cancelled permits also includes permits that were administratively removed or reconsidered through CFEC's adjudication process. Most of the cancelled permits have been in the salmon hand troll fishery (1,160 or 49.2% of the total permits cancelled) where a large number of non-transferable entry permits were issued.

Permit Buybacks

Some cancelled permits are voluntarily relinquished under the special circumstances of a buyback program. Generally, permit buyback programs are established to reduce effort in the fishery, to increase economic efficiency, and/or to conserve the fishery resource. There have been three federally-funded buyback programs of CFEC permits. A.S. 16.43.310 authorizes CFEC to establish its own buyback programs in order to achieve the optimum number in a fishery. To date, CFEC has not established any buyback programs.

A buyback first occurred in 1999 when the U.S. National Park Service administered a program to buy and permanently cancel 10 Southeast Alaska Dungeness crab permits. Nine permits were transferable (3 D9AA, 4 D9BA, and 2 D9CA), and one was non-transferable (D10A). This buyback removed permits for persons who had substantial fishing history in the marine waters of Glacier Bay National Park. It was part of a larger effort to phase out commercial fishing in the park. Each of the permit holders contractually agreed to allow their permits to lapse by not renewing them.

The second buyback program occurred in 2008 when 35 permanent transferable Southeast salmon purse seine permits (S01A) were bought and retired under the Southeast Revitalization Association (SRA) fleet consolidation program. The buyback was administered by the SRA and the Alaska Sustainable Salmon Fund (under Alaska Department of Fish and Game) using federal grant funds from the Pacific Coastal Salmon Recovery Fund. The goals of the buyback were to reduce effort, promote economic efficiency, and increase flexibility in conservation and management of the fishery.

The third buyback program occurred in 2012 with another round of buybacks in the Southeast salmon purse seine fishery that permanently retired 64 more S01A permits. The 2012 buyback was administered soley by the SRA, and was financed with a federal loan to be repaid by the remaining permit holders.

Chapter III Tables

The following tables present data germane to evaluating the effects of permits transfers, migrations, and cancellations on the distribution of permanent limited entry permits (both transferable and non-transferable).

Table 3-1. Number of Initial Permit Holders by Permit Type and Resident Type. Table 3-1 presents the distribution of permits by resident type for transferable permits and all permits (both transferable and non-transferable) at initial issuance. Recall that a non-transferable permit is a permanent limited entry permit that remains with the initial issuee and cannot be transferred. A transferable permit is a permanent limited entry permit that can be freely transferred.

Table 3-2. 2013 Year-end Distribution of Permit Holders by Permit Type and Resident Type. Table 3-2 presents the distribution of permits by resident type for transferable permits and for all permits (both transferable and non-transferable), at year-end 2013. This table excludes 2,360 permits which were canceled by the CFEC and not reinstated (summed over the entire period 1975-2013).

Table 3-3. Number of Permit Transfers Between Resident Types by Year. Table 3-3 presents the cross-cohort and intra-cohort transfers for the years 1975-2013 for all fisheries combined. Cross-cohort transfers are transfers between persons of different resident types while intra-cohort transfers are transfers between individuals of the same resident type. Cross-cohort transfers result in a change in the distribution of permits between the resident types while intra-cohort transfers do not.

Table 3-4. Number of Intra-Cohort and Cross-Cohort Permit Transfers by Permit Type, 1975-2013. Table 3-4 presents the total number of permit transfers as well as the number and percent of intra-cohort and cross-cohort transfers by fishery. Cross-cohort transfers are transfers between persons of different resident types while intra-cohort transfers are transfers between individuals of the same resident type. Cross-cohort transfers result in a change in the distribution of permits between the resident types while intra-cohort transfers do not. The number of transfers includes 345 permit foreclosures and 340 subsequent transfers of those permits; they are counted as cross-cohort transfers.

Table 3-5. Net Shifts in Resident Types Due to Permit Transfer Activity by Permit Type, 1975-2013. Table 3-5 presents the net shifts in resident types, by fishery, due to transfer activity. Recall that a transfer means that the permit has changed hands through gift, sale, or trade. Changes in permit distributions are counted in *net* terms. A net increase in permits means that after accounting for all permit transfers, the residency group gained permits. A net decrease in permits means that after accounting for all transfers, the residency group has fewer permits. A dash mark in this table signifies a fishery where no transfers have taken place since initial issuance. A zero indicates that there have been transfers in the fishery, but there was no net change as a result of those transfers.

Table 3-6. Cross-Cohort Migrations of Permit Holders by Year. Table 3-6 presents the number of cross-cohort migrations of permit holders by year, for the years 1976 – 2013. Recall that migrations refer to the relocation of permit holders. Cross-cohort migrations are migrations of permit holders from one resident type to another. Cross-cohort migrations result in a change in the distribution of permits among the resident types.

Table 3-7. Net shifts in Resident Types Due to Migration of Permit Holders, by Permit Type, 1975-2013. Table 3-7 presents the net shifts in resident types due to migration of permit holders by fishery. Recall that migration refers to the relocation of permit holders. Changes in permit distributions as a result of migration are counted in *net* terms. A net increase in permits means that after accounting for all migrations of permit holders, the residency group gained permits. A net

decrease in permits means that after accounting for all migrations of permit holders, the residency group has fewer permits. A dash mark in this table signifies a fishery where no migrations have occurred. A zero indicates that there have been migrations, but the migrations resulted in no net change.

Table 3-8. Summary of Annual Net Changes in Statewide Permit Holdings. Table 3-8 summarizes the net changes in permit holdings by resident type for the years 1975-2013. A breakout by resident type summarizes the net changes due to transfers, migrations, and cancellations. Changes in permit holdings are counted in "net" terms. A net increase in permits means that after accounting for all activity (transfers, migrations, or cancellations) of permit holders, the residency group gained permits. A net decrease in permits means that after accounting for all activity (transfers, migrations, or cancellations) of permit holders, the residency group has fewer permits.

- The figures for some permit types appear as dashes in this table if no transfers have occurred since initial issuance. If the table shows all zeros for a permit type, this indicates there were transfers but there was no net change.
- DCCED/CFAB - Department of Commerce, Community and Economic Development/Commercial Fishing and Agriculture Bank.

IV. AGE PATTERNS AMONG PERMIT HOLDERS

IV. AGE PATTERNS AMONG PERMIT HOLDERS

A concern of the drafters of the Limited Entry Act was that permits should remain accessible to new entrants, especially younger Alaskans. This section examines ages of permit holders, transferors, and transfer recipients over the lifetime of the limited entry program. Excluded from the data are non-transferable permits and permits which were foreclosed upon by the Department of Commerce, Community, and Economic Development (DCCED) or the Commercial Fishing and Agriculture Bank (CFAB).

Mean Age of Permit Holders, Transfer Recipients and Transferors

If no permits were transferred at all, the mean age of permit holders would logically increase by one year, each calendar year. Transfer recipients of a younger age can counter that increase, or conversely older transfer recipients can add to the increase in mean age of permit holders. The statewide mean age of all transferable permit holders decreased from 42.7 years in 1975 to 41.0 years in 1978 and remained at about that level through 1985. Since then, the mean age has increased slightly or held steady each year, and by the end of 2013 it had risen to 49.7 years. The calculation of the mean age of permit holders is impacted by persons who hold multiple permits. Each permit reflects the age of the permit holder; therefore, a person's age may be used more than once in the calculations.

The mean age of transfer recipients has generally increased from a low of 32.5 in 1976 to a high of 41.1 for both 2002 and 2003. Transfer recipients tend to be younger than transferors, but the mean age of each has generally risen over time. In 2013, the mean age of transfer recipients was 38.5 years, while the age of transferors averaged 50.3 years.

Chapter IV Tables

The following tables provide information about the ages of permit holders, transferors and transfer recipients.

Table 4-1. Yearly Mean Ages of Transferable Permit Holders, Transferors, Transfer Recipients, and Mean Age Differences. Statewide annual mean ages for all transferable permit holders, transferors, and transfer recipients are shown in Table 4-1 for the years 1975 – 2013. The table presents the number of transferable permits(excluding foreclosed permits), the mean age of all permit holders, the number of transfers, the mean age of the transferor, the mean age of the transfer recipient, and the mean age difference between the transferor and transfer recipient. The number of transfers and the mean age calculations exclude individuals with missing birthdate information.

Table 4-2. Yearly Mean Ages of Transferable Permit Holders, Transferors, Recipients, and Mean Age Differences Between Transferors and Recipients, by Year and Permit Type. Table 4-2 provides the same information as Table 4-1, but by fishery. The count of transferable permits excludes foreclosed permits. Mean age calculations exclude individuals with missing birthdate information. Age information is confidential when there are fewer than four permits in the fishery or less than four permit transfers within the fishery in a year. A pair of asterisks indicate these instances.

Table 4-3. Yearly Mean Ages of Transferable Permit Holders, Transferors, Recipients, by Resident Type. Table 4-3 presents the number of transferable permits and the mean age of all transferable permit holders by resident type. Resident type definitions can be found in Chapter III.

The annual number and mean age of all transferors and transfer recipients by resident type are also displayed. The count of transferable permits excludes foreclosed permits. The transferor count represents the number of transfers ***from*** the resident type. The transfer recipient count likewise represents number of transfers ***to*** a resident type. Mean age calculations exclude individuals with missing birthdate information.

Table 4-4. Age Class Distribution of Transferable Permit Holders, by Year and Resident Type. Table 4-4 divides transferable permit holders into six age classes: all permit holders age 20 and under; age 21 to 30; age 31 to 40; age 41 to 50; age 51 to 60; and all permit holders over the age of 60. The annual age distribution of permit holders by resident type is presented. Resident type definitions can be found in Chapter III. Mean age calculations exclude individuals with missing birthdate information.

Table 4-5. Mean Age of Transferable Permit Holders, by Permit Type, Year, and Resident Type. Table 4-5 breaks out the number of permits and mean ages by each fishery and by resident type. Resident type definitions can be found in Chapter III. Age information is confidential when there are fewer than four permits in the fishery, or fewer than four permits held by a resident type, or less than four permit transfers within the fishery in a year. A pair of asterisks indicate these instances.

Table 4-1. Yearly Mean Ages of Transferable Permit Holders, Transferors, Transfer Recipients, and Mean Age Differences

Year	Transferable Permits	Mean Age	Number of Transfers	Transferor Mean Age	Recipient Mean Age	Mean Age Difference
1975	6,762	42.7	590	52.0	33.1	-18.9
1976	9,160	41.6	776	45.9	32.5	-13.4

1997	12,787	45.3	952	47.0	38.8	-8.2
1998	13,155	45.7	851	47.7	38.8	-8.9
1999	13,305	46.1	790	47.8	38.4	-9.4
2000	13,384	46.4	928	47.6	37.9	-9.7
2001	13,683	46.8	927	47.6	40.6	-7.0
2002	13,676	47.4	732	48.1	41.1	-7.0
2003	13,585	47.9	889	49.3	41.1	-8.2
2004	13,485	48.2	939	49.7	39.7	-10.0
2005	13,587	48.3	1,094	50.3	39.3	-11.0
2006	13,590	48.5	991	49.2	38.7	-10.6
2007	13,589	48.7	1,034	49.7	39.4	-10.3
2008	13,560	48.8	1,070	50.4	39.4	-11.0
2009	13,566	49.2	957	48.5	39.3	-9.2
2010	13,586	49.3	1,156	50.4	40.1	-10.3
2011	13,568	49.4	1,221	50.2	40.7	-9.5
2012	13,468	49.7	1,018	49.9	40.4	-9.5
2013	13,457	49.7	1,107	50.3	38.5	-11.7

- The number of transferable permits excludes 345 foreclosed permits, 5 of which are still held by DCCED and CFAB.
- The number of transfers excludes permits where the permit holder has no birthdate on file.
- Mean ages may be based on fewer observations than number of permits because of missing birthdate information.

Table 4-2. Yearly Mean Ages of Transferable Permit Holders, Transferors, Recipients, and Mean Age Differences Between Transferors and Recipients, by Year and Permit Type

Permit Type	Year	Number of Permits	Number of Transfers	Mean Age	Mean Age of Transferors	Mean Age of Recipients	Difference

- Count of transferable permits excludes foreclosed permits.
- Transferor count represents the number of transfers ***from*** the resident type.
- Transfer recipient count represents number of transfers ***to*** a resident type.
- Mean ages may be based on fewer observations than the number of permits due to missing birthdate data.

- Permit holders without birthdate information are excluded from age calculations.
- Permits foreclosed by DCCED or CFAB are excluded.
- Age information is confidential when there are fewer than four permits in the fishery, fewer than four permits held by a resident type, or less than four permit transfers within the fishery in a year. A pair of asterisks indicates these instances.

V. PERMIT TRANSFER SURVEY RESULTS

V. PERMIT TRANSFER SURVEY RESULTS

When limited entry permits are transferred, CFEC requires the two parties involved in the transfer (transferor and transfer recipient) to complete a "transfer survey". The transfer survey allows the CFEC to monitor the broad transfer characteristics and transfer patterns of limited entry permits. The survey also allows CFEC transfer officers to evaluate the validity of a transfer. In order for a transfer recipient to receive an entry permit, the transfer recipient must be physically capable of actively participating in the fishery, have reasonable access to the necessary gear, and intend to fish the upcoming season. Permits cannot be leased, pledged, mortgaged, attached, distrained or transferred with any retained right of repossession or foreclosure, nor can permits be encumbered in any way, or on any condition requiring a subsequent transfer. Both parties involved in the transfer must sign an affidavit that attests to the validity of the survey and of all documents concerning the transfer.

The survey collects a variety of information from the transferor and the transfer recipient. In particular, the survey collects information on whether the transfer was a gift, sale, or trade; the source of permit financing; the relationship between the transferor and transfer recipient; how the permit was located; and the permit sale price. The transfer survey has been the source of information for CFEC estimated permit values, which are used by the Department of Commerce, Community, and Economic Development (DCCED) and the Alaska Commercial Fishing and Agriculture Bank (CFAB) for fishing loan purposes.

Historic Transfer Survey Completion

During the period spanning 1975 to 1979, the CFEC sent the survey to all transferors and transfer recipients, but its completion was voluntary and anonymous. During this period of voluntary compliance, completed surveys represented between 44 – 50% of all transfers.[1] The anonymity of survey respondents did not allow the surveys to be tied with other CFEC data, which made the survey data somewhat less useful. As a result of these limitations, survey information from 1975 to 1979 is not included in this report, but can be found in the first edition of this report which was published in 1983.

In 1980, the CFEC modified the transfer survey in both form and requirements. In that year, completion of the survey was made mandatory and survey questions were expanded to include questions about the relationship between the transfer parties. The survey could then be tied to other CFEC data. In late 1983, the survey was expanded to include information from the transferor.

Even though the survey was made mandatory in 1980, strict enforcement of this rule did not occur until 1981. There were 140 transfers in 1980 and 15 transfers in 1981 without completed surveys. Note that in every year some transfers occurred for which a transfer survey was not completed. This accounts for the slight differences in the totals columns between Table 2-1 and the tables in this chapter. The majority of transfers without surveys occur on DCCED or CFAB foreclosed permits. Overall the surveys represent 98.5% of all transfers since 1980 (34,143 number transfer surveys 1980-2013/ 34,662 number of transfers 1980-2013).

[1] CFEC "Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981". February 1983. Page 15.

Relationships of Transfer Participants

Beginning in 1980, transfer recipients were required to explicitly indicate their relationship to the transferor on the transfer survey. Tables 5-1 and 5-2 present the results of the transfer survey questions concerning the relationship between the transferor and the transfer recipient. Table 5-1 organizes the time-series information by permit type, while Table 5-2 organizes the information by the resident type of the transfer recipient.

There are four relationship categories:

1. **Friend/Partner:** this category includes those who indicated that the transferor was either a "personal friend" or "business partner". The friend category was reworded from "friend" to "personal friend" in October of 1983. This action may have contributed to the decrease in the "friend" category and concomitant increase in the "other" category after the wording change.
2. **Immediate Family:** this category includes all those who indicated that the transferor was a member of their immediate family.
3. **Other Relative:** this category includes all those who indicated that their relationship to the transferor was "other relative".
4. **Other:** transfer recipients may mark "other" on the survey form if they feel their relationship to the transferor does not fit into the categories above. The "other" category has a space to explain the nature of the relationship. The reported "other" category in this document includes those who indicated that the transferor had no relationship to themselves ("none" category). The 340 foreclosed permits that were subsequently transferred are included in this category.

Permit Acquisition Method: Gift, Sale, Trade, and Other

Under the Limited Entry Act's terms of free transferability, permanent limited entry permits may be sold, traded, gifted or inherited, thus enabling new participants to enter a fishery. The transfer survey includes a question about how the transfer recipient acquired the permit. Tables 5-3 and 5-4 present the results of the transfer survey's question on the acquisition method. Table 5-3 organizes the time-series information by permit type, while Table 5-4 organizes the information by the resident type of the transfer recipient.

There are four acquisition method categories:

1. **Gift:** a transfer between individuals where no remuneration is received between parties. Permits transferred as part of an inheritance are also classified as gifts. The incidence of gift transactions has accounted for roughly 30-40% of all transfers since 1980. Gifts accounted for only 21.5% of all transfer survey responses in the 1975-1979 period. The increase in gift responses may be a result of efforts to enforce the Limited Entry Act's prohibitions against leasing permits. Therefore, some of the 'gift' responses may actually represent lease arrangements, or carry reciprocal expectations.

2. **Trade:** a transfer between individuals where a permit is traded for other items of material value. The items and their values are required to be documented on the transfer survey.

3. **Sale:** a transfer between individuals where a monetary transaction occurs for the permit. For sales transactions, the survey asks for the sale price and type of financing used.
4. **Other:** a transfer recipient may mark "other" on the survey form if they feel that their method of acquisition does not fit into the categories of permit purchase only, combined purchase, gift, trade, or inheritance. The "other" category has a space to explain the nature of the acquisition method.

Estimated Permit Values

Permit values are derived from the monthly CFEC Permit Value Report (PVR). Table 5-5 presents time-series data on the mean permit values by permit type. The figures represent the annual mean value of arms-length sales transactions. If fewer than four transactions occur in a year, values from previous years are included to calculate the mean. All of the prices are in nominal dollars, which do not reflect adjustments for general price inflation. To maintain restrictions on confidential data, permit values cannot be shown in some cases. A pair of asterisks indicate these instances. The method of calculating the annual mean value of arms-length transactions was standardized in 1987. Prior to 1987, different methods were used. As a result, permit values prior to 1987 do not display a 'Begin' and 'End' date in Table 5-5.

There are 9 permit types that do not appear in Table 5-5. These 9 permit types do not appear because there have been no sales transactions to estimate the permit value. Three of the nine permit types do not appear as all permits issued in the fishery are non-transferable permits. Non-transferable permits cannot be sold. The nine permit types that do not appear in Table 5-5 are:

1. Prince William Sound sablefish net gear, vessel length up to 50ft
2. Southeast Dungeness crab ring net (all non-transferable)
3. Cook Inlet Dungeness crab ring net
4. Cook Inlet Dungeness crab diving gear (all non-transferable)
5. Kodiak roe herring purse seine and gillnet
6. Kodiak herring food/bait otter trawl fixed vessel length up to 75ft
7. Kodiak herring food/bait otter trawl fixed vessel length up to 70ft
8. Kodiak herring food/bait otter trawl fixed vessel length up to 60ft
9. Southeast shrimp otter trawl (all non-transferable)

Permit values are confidential when there have been fewer than 4 permit sales. In Table 5-5, there are 6 permit types where the permit value is confidential. A pair of asterisks indicates confidential permit values.

Financing of Permit Purchases

If the transfer recipient marked that the permit was acquired through a sales transaction, they must answer what source of financing was used. Beginning in 1990, the method of evaluating the survey responses was changed.

Finance source data from 1980 to 2013 is evaluated in the following manner:

1. Survey respondents may mark "other" on the survey form if they feel their source of financing does not fit into the categories of personal resources, DCCED loan, CFAB loan, other bank loans, or loans from the transferor or a processor. A review of the comments associated with the surveys marked "other" revealed that a large number of these involved

unique methods of self-financing or loans from relatives or friends. Because of the strong association of the "other" financing with that of the personal resources financing, those responses are combined and classified under a "Self/Other" category thus eliminating the nondescriptive "other" category for the purposes of this report.

2. For surveys where two finance sources were indicated, and one of those sources was "Self/Other," the finance source reported in tables of this study is that of the alternate (other than the "Self/Other" category). The self-financing associated with permits financed by multiple methods is primarily in the form of a down payment or interim financing. The "Self/Other" category is intended to be representative of permit purchases that are primarily financed by personal resources rather than simply purchases involving a down payment as many financing methods commonly involve a down payment.
3. Surveys involving three finance sources as well as the remainder of the two finance source surveys (i.e., those surveys that did not indicate "Self/Other") are reported under the category of "Combination" financing in subsequent tables of this study.

Tables 5-6 and 5-7 present the results of the transfer survey's permit financing question. Table 5-6 organizes the time-series information by permit type, while Table 5-7 organizes the information by the resident type of the transfer recipient.

There are seven categories of permit financing reported:

1. **Self/Other:** permit purchased with personal resources or "other" means. The transfer survey has "other" as an option with an accompanying space for explanation.
2. **Bank:** permits financed through bank loans. Copies of promissory notes must be submitted with the survey.
3. **DCCED:** permits financed with Department of Commerce, Community, and Economic Development (DCCED) loans.
4. **CFAB:** permits financed with Commercial Fishing and Agriculture Bank (CFAB) loans.
5. **Transferor:** permits financed through a transferor (seller) provided loan. The agreement between parties must be submitted with the transfer survey.
6. **Processor:** permits financed through a fish processor loan.
7. **Combination:** permits financed using some combination of the preceding six financing methods.

Foreclosures on Permit Loans

By Alaska Statue, DCCED or CFAB are the only two lending entities that can accept a CFEC entry permit as collateral on a loan (A.S. 16.10.333). Table 5-8 reports time-series data on the number of permit loans foreclosed upon by DCCED or CFAB. Nonresidents are not eligible for DCCED or CFAB loans. As such, the nonresident permit loan foreclosures likely represent individuals who were Alaska residents when they received their loans and subsequently changed their residency status prior to foreclosure.

Chapter V Tables

Transfer survey results from 1980 to 2013 are presented in the following tables.

Table 5-1. Relationships of Transferors to Transfer Recipients, by Permit Type and Year. Table 5-1 presents the relationships of transferors to transfer recipients by fishery and year. The table provides the number and percentage of each relationship category. Statewide averages are shown in the "All Permit Fisheries" permit type at the end of this table. The transfer survey information for the 345 foreclosed permits is not included in this table. The subsequent transfer of 340 of the 345 foreclosed permits from DCCED or CFAB back to individuals are counted in the "other" category. The 1981 Yakutat salmon set gillnet fishery includes one survey in which the relationship was not indicated.

Table 5-2. Relationships of Transferors to Transfer Recipients, by Resident Type of the Recipient, by Year. Table 5-2 presents the relationship of transferor to the transfer recipient by the resident type of the transfer recipient (resident type definitions are provided in Chapter III). Transfer survey information for the 345 foreclosed permits is not included in this table. The subsequent transfer of 340 of the 345 foreclosed permits from DCCED or CFAB back to individuals are counted in the "other" category. The 1981 Yakutat salmon set gillnet fishery includes one survey in which the relationship was not indicated.

Table 5-3. Transfer Acquisition Methods, by Permit Type and Year. Table 5-3 presents time-series data on the transfer acquisition methods reported in surveys from 1980 to 2013. The table displays both the number and percentage of acquisition categories. Statewide averages are presented in the "All Permit Fisheries" permit type at the end of this table. The transfer survey information for the 345 foreclosed permits is not included in this table. The subsequent transfer of 340 of the 345 foreclosed permits from DCCED or CFAB back to individuals are counted in the "other" category. The 1981 Yakutat salmon set gillnet fishery includes one survey in which the relationship was not indicated.

Table 5-4. Transfer Acquisition Methods, by Resident Type of Transfer Recipient. Table 5-4 reports transfer acquisition methods by the resident type of the transfer recipient. The table displays both the number and percentage of acquisition categories. Statewide averages are presented in the "All Permit Fisheries" permit type at the end of this table. Residency definitions are provided in Chapter III.

Table 5-5. Estimated Permit Values From Survey Data, by Permit Type and Year. In Table 5-5, average permit values are given by permit type and year for permit sales during the period 1982 through 2013. Permit values are derived from the monthly CFEC Permit Value Report (PVR). The figures represent the annual average price of arms-length sales transactions. If fewer than four transactions occur in a year, values from previous years are used to calculate the average. All of the prices are in nominal dollars, which do not reflect adjustments for general price inflation. To maintain restrictions on confidential data, permit values cannot be shown in some cases. A pair of asterisks indicate these instances. The 'Permit Sales' column represents the number of arms-length sales transactions that occurred in that year. The 'Begin' and 'End' columns provide information on the temporal spread of transactions used to calculate the permit value. The 'Begin' column represents the month and year of first sales transaction used to calculate the year's permit value. The 'End' column represents the month and year of the last sales transaction used to calculate the year's permit value. The method of calculating the annual average price of arms-length transactions was

standardized in 1987. Prior to 1987, different methods were used. As a result, permit values prior to 1987 do not display a 'Begin' and 'End' date.

There are 9 permit types that do not appear in Table 5-5. These 9 permit types do not appear because there have been no sales transactions off which to estimate value. Three of the nine permit types do not appear as all permits issued in the fishery are non-transferable permits. Non-transferable permits cannot be sold. The nine permit types that do not appear in Table 5-5 are:

1. Prince William Sound sablefish net gear, vessel length up to 50ft
2. Southeast Dungeness crab ring net (all non-transferable)
3. Cook Inlet Dungeness crab ring net
4. Cook Inlet Dungeness crab diving gear (all non-transferable)
5. Kodiak roe herring purse seine and gillnet
6. Kodiak herring food/bait otter trawl fixed vessel length up to 75ft
7. Kodiak herring food/bait otter trawl fixed vessel length up to 70ft
8. Kodiak herring food/bait otter trawl fixed vessel length up to 60ft
9. Southeast shrimp otter trawl (all non-transferable)

Table 5-6. Sources of Permit Financing, by Permit Type and Year. Table 5-6 provides time-series data about sources of permit financing by permit type and year. This table only includes surveys where respondents indicated they purchased their permit. There are seven sources of permit financing reported in this table: self/other, bank, DCCED, CFAB, transferor, processor, and combination. Averages for statewide sources of permit financing can be found in the "All Permit Fisheries" permit type at the end of this table.

Table 5-7. Sources of Permit Financing, by Resident Type of Transfer Recipient. Table 5-7 presents time-series data about sources of permit financing organized by the resident type of the transfer recipient. Resident type definitions are provided in Chapter III. This table only includes surveys where respondents indicated they purchased their permit. There are seven sources of permit financing reported in this table: self/other, bank, DCCED, CFAB, transferor, processor, and combination. Averages for statewide sources of permit financing can be found in the "All Permit Fisheries" permit type at the end of this table.

VI. PERMIT TRANSFERS BETWEEN ALASKA RURAL LOCALS AND OTHER RESIDENT TYPES

VI. PERMIT TRANSFERS BETWEEN ALASKA RURAL LOCALS AND OTHER RESIDENT TYPES

The long-term effects of limited entry on rural coastal fishing communities have been of considerable interest to the Alaska State Legislature, the State of Alaska administration, and the public. Particular attention has been paid to the degree to which limited entry permits have been transferred away from rural fishing communities.

This section will present information regarding only the cross-cohort transfers of permits associated with Alaska Rural Locals (ARLs). A permit is classified as held by an ARL if the permit holder resides in a rural Alaska community that is local to the fishery in question.[1] Recall that a cross-cohort transfer is a transfer between persons of different resident types. Cross-cohort transfers result in a change in the distribution of permits among resident types.

Chapter VI Tables

Table 6-1. Permit Transfers Between Alaska Rural Locals and Other Resident Types, by Year. Table 6-1 presents time-series information on the net results of cross-cohort transfers of permits associated with Alaska Rural Locals. The total number of transfers from and to Alaska Rural Locals are displayed in the second and third columns respectively. Starting in the fourth column of Table 6-1, the net shifts as a result of transfers to and from Alaska Rural Locals are examined by resident type. A positive figure represents a net increase, while a negative figure represents a net decrease, and a zero means that there has been no net change. Resident type definitions can be found in Chapter III. The DCCED/CFAB column represents net changes due to action on permits temporarily held by the Department of Commerce, Community, and Economic Development or the Commercial Fishing and Agriculture Bank. The Alaska Urban column is the sum of the net shifts for Alaska Urban Locals and Alaska Urban Nonlocals. The Alaska Nonlocal column is the sum of the net shifts for Alaska Rural Nonlocals, Alaska Urban Nonlocals, and DCCED/CFAB. The "Total" row at the bottom of Table 6-1 represents the total effects of transfers between Alaska Rural Locals and other resident types over the time period of limited entry (1975-2013). Intra-cohort transfers from Alaska Rural Locals to other Alaska Rural Locals can be found in Table 3-3 in Chapter III.

Table 6-2. Permit Transfers Between Alaska Rural Locals and Other Resident Types, by Permit Type. Table 6-2 continues from Table 6-1 and breaks out the results of cross-cohort transfers between Alaska Rural Locals (ARLs) and other resident types, by permit type. By permit type, the total transfers from ARLs are reported in the second column labeled, "From Alaska Rural Local". The third column reports the total number of transfers to ARLs labeled, "To Alaska Rural Local". The fourth column represents the net change of permits held by Alaska Rural Locals (to ARL minus from ARL). The fifth column, "Initial Alaska Rural Local" presents the total number of limited entry permits initially issued to Alaska Rural Locals. Note that the initial count includes non-transferable permits. Non-transferable permits cannot be transferred and remain with the initial issuees. The "Percent Initial Level" column is the result of dividing the "Net Alaska Rural Local Shift" figure by the "Initial Alaska Rural Local" figure. Starting in the seventh column of Table 6-2, the net shifts as a result of transfers between Alaska Rural Locals and other resident types are

[1] For detailed information concerning local/nonlocal and urban/rural rules, please see Appendix A.

examined by resident type. A positive figure represents a net increase, while a negative figure represents a net decrease, and a zero means that there has been no net change. Resident type definitions can be found in Chapter III. The DCCED/CFAB column represents net changes due to action on permits temporarily held by the Department of Commerce, Community, and Economic Development or the Commercial Fishing and Agriculture Bank. The Alaska Urban column is the sum of the net shifts for Alaska Urban Locals and Alaska Urban Nonlocals. The Alaska Nonlocal column is the sum of the net shifts for Alaska Rural Nonlocals, Alaska Urban Nonlocals, and DCCED/CFAB.

Table 6-3. Relationships of Parties in Permit Transfers Between Alaska Rural Locals and Other Resident Types, by Permit Type and Year. Table 6-3 provides the relationships between parties for Alaska Rural Local cross-cohort transfers that occurred between 1980 and 2013. The relationship information is organized by permit type and year. The relationship columns provide both the number and percentage of transfers involving ARLs (both to and from). Relationship group definitions can be found in Chapter V. Transfer survey information concerning foreclosed permits is not included in this table.

Table 6-4. Permit Acquisition Methods Used in Permit Transfers Between Alaska Rural Locals and Other Resident Types, by Permit Type and Year. The methods used to acquire permits through ARL cross-cohort transfers are presented in Table 6-4. This table reports on all permit transfers where Alaska Rural Locals were involved, as either the transfer recipient or the transferor. Under the Limited Entry Act's terms of free transferability, permanent limited entry permits may be sold, traded, gifted or inherited, thus enabling new participants to enter a fishery. The transfer recipient is required to report which acquisition method was used to obtain the permit on the CFEC transfer survey. Table 6-4 reports the acquisition method statistics for transfer recipients where the transfer involved an Alaska Rural Local. The permit acquisition method columns provide both the number and percentage of permit acquired by each method: gift, sale, trade or other for permit transfers involving ARLs. For more information on the four acquisition method categories see Chapter V. Transfer survey information concerning foreclosed permits is not included in this table.

Table 6-5. Financing Methods Used in Permit Transfers Between Alaska Rural Local Permit Holders and Other Resident Types, by Permit Type and Year. Information on financing methods used in ARL cross-cohort permit sales is provided in Table 6-5. This table reports on all permit sales where Alaska Rural Locals were involved, as either the transfer recipient or the transferor. The information on permit financing is gathered from the CFEC transfer survey. If the permit transfer was a sales transaction, the transfer recipient is required to report what financing method was used to finance the permit. The seven financing method categories are self/other, bank, DCCED, CFAB, transferor, processor, and combination. More information on the categories of financing methods can be found in Chapter V. The table columns for methods of permit financing provide both the number and percentage of permits acquired by each financing method for permit transfers involving ARLs.

- Only transfers between Alaska Rural Locals and other resident types are considered in this table.
- Intra-cohort transfers from Alaska Rural Locals to other Alaska Rural Locals can be found in Table 3-3.
- DCCED/CFAB - Foreclosed or sales of foreclosed permits by the DCCED or CFAB.
- Alaska Urban consists of Alaska Urban Local and Alaska Urban Nonlocal.
- Alaska Nonlocal includes Alaska Rural Nonlocal, Alaska Urban Nonlocal, and DCCED/CFAB resident types. Nonresidents are excluded from this count.

- Source: CFEC permit transfer survey for permit sales transactions.
- This table includes all permit sales where Alaska Rural Locals were involved, either as transfer recipient, or as transferor.

VII. PERMIT TRANSFERS BETWEEN ALASKA LOCALS AND OTHER RESIDENT TYPES

VII. PERMIT TRANSFERS BETWEEN ALASKA LOCALS AND OTHER RESIDENT TYPES

Permits held by Alaska Locals are the focus of this chapter. This study defines Alaska Local permits as the sum of permits held by Alaska Rural Locals (ARL) and Alaska Urban Locals (AUL). A complete list of resident type definitions can be found in Chapter III. Tables in this chapter provide information on the cross-cohort transfers between Alaska Local permit holders and other resident types. A cross-cohort transfer is a transfer between persons of different resident types. Cross-cohort transfers result in a change in the distribution of permits among resident types. The tables presented in this chapter are similar to the previous section on transfers involving Alaska Rural Locals.

Chapter VII Tables

Table 7-1. Permit Transfers Between Alaska Locals and Other Resident Types, by Year. Table 7-1 presents time-series information on the net results of cross-cohort transfers of permits associated with Alaska Locals (ARL + AUL). The total number of transfers from and to Alaska Locals are displayed in the second and third columns respectively. Starting in the fourth column, Table 7-1 displays the net shifts as a result of transfers between Alaska Locals and other resident types. A positive figure represents a net increase, while a negative figure represents a net decrease, and a zero means that there has been no net change. Resident type definitions can be found in Chapter III. The DCCED/CFAB column represents net changes due to action on permits temporarily held by the Department of Commerce, Community, and Economic Development or the Commercial Fishing and Agriculture Bank. The Alaska Nonlocal column is the sum of the net shifts for Alaska Rural Nonlocal, Alaska Urban Nonlocal, and DCCED/CFAB. The Total row at the bottom of Table 7-1 represents the total effects of transfers between Alaska Locals and other resident types over the time period of limited entry (1975-2013).

Table 7-2. Permit Transfers Between Alaska Locals and Other Resident Types, by Permit Type. Table 7-2 continues from Table 7-1 and breaks out the results of cross-cohort transfers by permit type. The total counts of transfers from and to Alaska Locals are displayed in the second and third columns respectively, by permit type. The fourth column represents the net changes in permits held by Alaska Locals (to Alaska Local minus from Alaska Local). The fifth column, "Initial Alaska Local" presents the total number of limited entry permits initially issued to Alaska Locals. Note that the initial count includes non-transferable permits. Non-transferable permits cannot be transferred and remain with the initial isuees. The "Percent Initial Level" column is the result of dividing the "Net Alaska Local Shift" by the "Initial Alaska Local" figure. Starting in the seventh column, the table displays the net shifts as a result of transfers associated with Alaska Locals. A positive figure represents a net increase, while a negative figure represents a net decrease, and a zero means that there has been no net change. Resident type definitions can be found in Chapter III. The DCCED/CFAB column represents net changes due to action on permits temporarily held by the Department of Commerce, Community, and Economic Development or the Commercial Fishing and Agriculture Bank. The Alaska Nonlocal column is the sum of the net shifts for Alaska Rural Nonlocal, Alaska Urban Nonlocal, and DCCED/CFAB.

Table 7-3. Relationships of the Parties in Permit Transfers Between Alaska Locals and Other Resident Types. Table 7-3 provides information concerning the relationships between parties for Alaska Local (ARL + AUL) cross-cohort transfers that occurred between 1980 and 2013. The

relationship information is organized by permit type and year. The relationship columns provide both the number and percentage of transfers involving Alaska Locals. Relationship definitions can be found in Chapter V. Transfer survey information concerning foreclosed permits is not included in this table.

Table 7-4. Acquisition Methods Used in Permit Transfers Between Alaska Locals and Other Resident Types, by Permit Type and Year. The methods used to acquire permits through cross-cohort transfers between Alaska Locals (ARL + AUL) and other resident types are presented in Table 7-4. This table reports on all permit transfers where Alaska Locals were involved, either as the transfer recipient or the transferor. Under the Limited Entry Act's terms of free transferability, permanent limited entry permits may be sold, traded, gifted or inherited, thus enabling new participants to enter a fishery. The transfer recipient is required to report which acquisition method was used to obtain the permit on the CFEC transfer survey. Table 7-4 reports the acquisition method statistics for transfer recipients where the transfer involved an Alaska Local. The table permit acquisition method columns provide both the number and percentage of permit acquired by each method: gift, sale, trade or other for permit transfers involving Alaska Locals. For more information on the acquisition method categories see Chapter V. Transfer survey information concerning foreclosed permits is not included in this table.

Table 7-5. Financing Methods Used in Permit Transfers Between Alaska Locals and Other Resident Types, by Permit Type and Year. Information on financing methods used in cross-cohort permit sales between Alaska Locals (ARL + AUL) and other resident types is provided in Table 7-5. This table reports on all permit sales where Alaska Rural Locals were involved, either as the transfer recipient or the transferor. The permit financing method information is gathered from the CFEC transfer survey. If the permit transfer was a sales transaction, the transfer recipient is required to report which financing method was used to finance the permit on the transfer survey. The seven financing method categories are self/other, bank, DCCED, CFAB, transferor, processor, and combination. More information on financing method categories can be found in Chapter V. The table columns for methods of permit financing provide both the number and percentage of permits acquired by each financing method for permit transfers involving Alaska Locals.

Table 7-1. Permit Transfers Between Alaska Locals and Other Resident Types, by Year

- DCCED/CFAB represents foreclosures by the Department of Commerce, Community and Economic Development or Commercial Fishing and Agriculture Bank.
- Alaska Local is the sum of permits held by Alaska Rural Locals (ARL) and Alaska Urban Locals (AUL).
- Alaska Nonlocal includes Alaska Rural Nonlocal, Alaska Urban Nonlocal, and DCCED/CFAB resident types. Nonresidents are excluded from this count.
- Only transfers between Alaska Locals and other resident types are considered in this table.

- DCCED/CFAB represents foreclosures by the Department of Commerce, Community and Economic Development or the Commercial Fishing and Agriculture Bank.
- Alaska Local is the sum of permits held by Alaska Rural Locals (ARL) and Alaska Urban Locals (AUL).
- Alaska Nonlocal includes Alaska Rural Nonlocal, Alaska Urban Nonlocal, and DCCED/CFAB resident types. Nonresidents are excluded from this count.

- This table includes all permit sales where Alaska Locals were involved, either as transfer recipient, or as transferor.

VIII. MULTIPLE PERMIT HOLDINGS

VIII. MULTIPLE PERMIT HOLDINGS

Consolidation Efforts

Salmon prices declined dramatically in the early 2000's, reducing the value of the salmon fisheries and creating concern for the future economic viability of the industry. As a result, fishermen and policymakers explored many options for restructuring the fisheries. One such effort was implemented in 2002, when the Alaska Legislature passed House Bill 286, which amended Alaska Statute 16.43.140 (c). The law allows individuals to hold two salmon limited entry permits in the same fishery. The permits may be either limited entry or interim-use permits. The law specifies that individuals who hold two salmon limited entry permits are allowed to fish only one of the two permits. However, this prohibition was supplanted under specific circumstances by House Bill 251, which was passed in 2006. This law gives the Alaska Board of Fisheries (Board) the authority to grant fishing privileges to the second permit held by an individual (AS 16.05.251).

Although much of the initial interest in presenting House Bill 286 was centered on fishing activity in Bristol Bay, the bill was introduced as applicable to all CFEC limited entry permits. By the time the bill was signed into law in the same year, it had been modified to apply to salmon permits only.

The provisions were designed to assist fishermen in several ways. The law would allow individuals to purchase and hold a permit at times that are opportune to them. It would also allow families to acquire permits and hold them until their children become of age to fish them. And finally, the law would allow for a flexible and voluntary means of fleet consolidation.

Stacked Permit Operations

As mentioned above, in 2006 Alaska Statute 16.05.251 was amended, granting the Alaska Board of Fisheries authority to adopt regulations to allow additional fishing privileges to permit holders who hold two permits in a salmon fishery. The resulting operation is called a stacked permit operation.

> **Stacked Permit Operation:** consists of one individual holding two permits in a salmon fishery. This person is allowed to fish two legal units of gear, effectively fishing both permits at the same time.

To date, the Board has authorized stacked permit operations in the following salmon set gillnet fisheries:

1. **Kodiak Salmon Set Gillnet:** Regulation 5 AAC 18.331 went into effect in 2008 with a clause for it to sunset at the end of 2010 unless reauthorized by the Board. At the 2011 Kodiak Finfish meeting, the Board decided to allow the sunset provision to prevail, effectively returning he fishery to its former status, where a permit holder is restricted to fishing one legal unit of gear. Individuals are still allowed to own two permits in the fishery, but the second permit can no longer be fished.
2. **Bristol Bay Salmon Set Gillnet:** Regulation 5 AAC 06.331 went into effect in 2010 with a clause for it to sunset at the end of 2012 unless reauthorized by the Board. At the 2012 Bristol Bay Finfish meeting, the Board failed to pass Proposal 44, which would have repealed the sunset clause. Individuals are still allowed to own two permits in the fishery, but the second permit can no longer be fished.

3. **Cook Inlet Salmon Set Gillnet:** Regulation 5 AAC 21.331 went into effect in 2011. The Cook Inlet regulation does not have a sunset provision.
4. **Yakutat Salmon Set Gillnet:** Regulation 5 AAC 30.345(i) went into effect in 2012. The Yakutat regulation does have a sunset provision and will expire at the end of 2014 unless reauthorized by the Board.

Chapter VIII Tables

Table 8-1. Number of Permit Holders with Two Permits in the Same Fishery at Year-end. Table 8-1 tabulates year-end counts of individuals who hold two permits in the same salmon permit fishery in total and by resident type. Resident type definitions can be found in Chapter III. Note that this table differs from those in previous chapters, in that permit holders are counted rather than permits. The percentages are the number of individuals in each category who hold two permits divided by the overall number of permit holders in the fishery. For example, the table indicates that at year-end 2013 there were 8 individuals in the Bristol Bay set gillnet fishery that held two Bristol Bay set gillnet permits. There are 970 total individuals in the fishery. The percentage of permit holders with two permits in the Bristol Bay set gillnet fishery is 0.8% (8 permit holders with two permits/970 total permit holders). The total count of permits in each fishery can be calculated by adding the number of permit holders to the count of permit holders who hold two permits. The total count of year-end 2013 permits can also be found in Table 3-2 in Chapter III.

Table 8-2. Kodiak Salmon Set Gillnet Second Permit Acquisition Source. Stacked permit operations were allowed in the Kodiak salmon set gillnet fishery from 2008 through 2010 under 5 AAC 18.331. Table 8-2 examines how individuals holding two Kodiak salmon set gillnet permits acquired their second permit; either through cross-cohort or intra-cohort transfer. Recall that cross-cohort transfers are transfers between persons of different resident types, while intra-cohort transfers are transfers between individuals in the same resident type. Cross-cohort transfers result in a change in the distribution of permits between the resident types while intra-cohort transfers do not. Resident type definitions can be found in Chapter III.

Table 8-3. Bristol Bay Salmon Set Gillnet Second Permit Acquisition Source. Stacked permit operations were allowed in the Bristol Bay salmon set gillnet fishery from 2010 through 2012 under 5 AAC 06.331. Table 8-3 examines how individuals holding two Bristol Bay salmon set gillnet permits acquired their second permit; either through cross-cohort or intra-cohort transfer. Recall that cross-cohort transfers are transfers between persons of different resident types, while intra-cohort transfers are transfers between individuals in the same resident type. Cross-cohort transfers result in a change in the distribution of permits between the resident types while intra-cohort transfers do not. Resident type definitions can be found in Chapter III.

Table 8-4. Cook Inlet Salmon Set Gillnet Second Permit Acquisition Source. Stacked permit operations were allowed in the Cook Inlet salmon set gillnet fishery beginning in 2011 under 5 AAC 21.331(i). Table 8-4 examines how individuals holding two Cook Inlet salmon set gillnet permits acquired their second permit; either through cross-cohort or intra-cohort transfer. Recall that cross-cohort transfers are transfers between persons of different resident types, while intra-cohort transfers are transfers between individuals in the same resident type. Cross-cohort transfers result in a change in the distribution of permits between the resident types while intra-cohort transfers do not. Resident type definitions can be found in Chapter III.

Table 8-5. Yakutat Salmon Set Gillnet Second Permit Acquisition Source. Stacked permit operations are allowed in the Yakutat salmon set gillnet fishery beginning in 2012 under 5 AAC 30.345(i). The Yakutat regulation does have a sunset provision and will expire at the end of 2014 unless reauthorized by the Board of Fisheries. Table 8-5 examines how individuals holding two Yakutat salmon set gillnet permits acquired their second permit; either through cross-cohort or intra-cohort transfer. Recall that cross-cohort transfers are transfers between persons of different resident types while intra-cohort transfers are transfers between individuals in the same resident type. Cross-cohort transfers result in a change in the distribution of permits between the resident types while intra-cohort transfers do not. Resident type definitions can be found in Chapter III.

- Percent is the quotient of permit holders with two permits divided by total permit holders.
- Permits held by DCCED/CFAB are not considered in this table.

- In 2012, 5 AAC 30.345 (i) allowed a person who holds two S04D permits to utilize additional amounts of gear. The Yakutat regulation does have a sunset provision and will expire at the end of 2014 unless reauthorized by the Board of Fisheries.

APPENDIX A. DECISION RULES USED TO DESIGNATE URBAN, RURAL, LOCAL, AND NONLOCAL

APPENDIX A. DECISION RULES USED TO DESIGNATE URBAN, RURAL, LOCAL, AND NONLOCAL

Urban and rural community designations are based upon information from U.S. Census 2010. Prior editions of this report published between 2004 and 2012 used Census 2000 criteria to designate rural or urban. U.S. Census data is merged with CFEC permit data to produce the CFEC Census File. The CFEC Census File is maintained by CFEC Research staff and updated as needed and with each Decennial Census. Its primary function is to cross-reference all places in Alaska with the CFEC permits that are local to those respective places along with rural/urban designations, population, and FIPS (Federal Information Processing Standard) codes.

Urban and Rural Classification

For each Decennial Census since the 1950 Census, the Census Bureau has reviewed its methods of classifying areas as rural or urban in order to improve classification methods (76 FR 53030). These methodology changes may change the designation of a community from rural to urban or vice versa. For Census 2010, the Census Bureau classifies as "urban" all territory, population, and housing units located within an urbanized area or an urban cluster. An "urban area" is defined by the Census Bureau as an urbanized area with a population greater than 50,000 persons. An "urban cluster" is likewise defined as urbanized area with a population between 2,500 and 50,000 persons (76 FR 53030).

The Census Bureau's classification of "rural" consists of all territory, population, and housing units located outside of urbanized areas or urban clusters. Geographic entities, such as census tracts, counties, metropolitan areas, and the territory outside metropolitan areas, often are 'split' between urban and rural territory, and the population and housing units they contain often are partly classified as urban and partly classified as rural.

Rural/urban designations in the CFEC Census File generally parallel Census 2010 data. Where communities are classified as partly rural and partly urban in Census 2010, CFEC analysts made a determination of rural or urban based upon the classification of the majority of the community's population. For example, Steele Creek is a Census Designated Place (CDP) in the Fairbanks North Star Borough. Steele Creek was reported to have a total population of 6,662 individuals. Census 2010 classified 1,392 Steele Creek residents as residing "Inside Urbanized Area" and the remaining 5,270 were classified as "rural". Steele Creek CDP is therefore classified as rural in the CFEC Census File as 79.1% (5,270 Rural/6,662 Total) of the population was classified as rural.

The US Census did not evaluate all Alaskan communities in Census 2010. Some smaller communities are not evaluated on their own if the US Census subsumes the community into a larger city, CDP, or municipality. For places not evaluated individually in Census 2010, CFEC examined the Alaska Department of Labor's urban cluster maps. If a small community lies in one of the identified urban clusters, CFEC designated the community as urban in the CFEC Census File. Likewise, if it lies outside one of the identified urban clusters, CFEC classified the community as rural in the CFEC Census File.

Table A-1, *Historic U.S. Census Use,* documents which U.S. Census was used to designate rural/urban in previous editions of this report. Table A-2, *Urban Communities*, lists all cities that are currently

classified as urban in the CFEC Census File and the Borough or Census Area which the city belongs to. Table A-3 lists all new Alaska communities in Census 2010. Table A-4 lists all communities where rural/urban designations have been reclassified under Census 2010 rules. Table A-5 lists all places that were classified as rural in CFEC Census File and in this report.

Table A-1. Historic U.S. Census Use

Census Used	First Edition of Transfer Study to Use Census	Rural / Urban Rule used in Transfer Study
Census 2010	2013 Edition (covering 1975 - 2012)	Based on Census 2010 rules.
Census 2000	2004 Edition (covering 1975 - 2003)	Based on Census 2000 rules.
Census 1990	1991 Edition (covering 1975 - 1990)	All towns with 1990 Census population of 2,500 or more.
Census 1980	1983 Edition (covering 1975 - 1981)	All towns with 1980 Census population of 2,000 or more.

Local and Nonlocal Decision Rules

In the course of updating the CFEC Census File, CFEC analysts evaluated each Alaska Community using Geographic Information Systems (GIS) mapping software. A summation of the Local and Nonlocal decision rules are listed below.

1. On the coast, area lines are based on Fish and Game salmon regulatory areas. Residences in both Southeast and Yakutat are designated local to the hand and power troll fisheries. In accordance with permit and fishery regulations residences within the Cape Yakutaga and Port Heiden overlap area are "local" for both relevant overlap areas (20 AAC 05.230 (B)(i)). Additionally, Table A-6 highlights communities that are local to more than one ADF&G management area.

Table A-6. Communities Local to More Than One Alaska Department of Fish and Game Management Area

Community	ADF&G Salmon Management Areas
Port Heiden	Bristol Bay/ Alaska Peninsula
Cape Newenham	Bristol Bay/Kuskokwim
Aguikchuk	Kuskokwim/Nelson Island/Nunivak Island
Anogok	Kuskokwim/Nelson Island/Nunivak Island
Chefornak	Kuskokwim/Nunivak Island
Icy Bay	Prince William Sound/Statewide Troll/ Yakutat
Inger	Kuskokwim/Nelson Island/Nunivak Island
Kipnuk	Kuskokwim/Nelson Island/Nunivak Island
Mekoryuk	Kuskokwim/Nelson Island/Nunivak Island
Nash Harbor	Kuskokwim/Nelson Island/Nunivak Island
Nelson Island	Kuskokwim/Nelson Island/Nunivak Island
Newtok	Kuskokwim/Nelson Island/Nunivak Island
Nightmute	Kuskokwim/Nelson Island/Nunivak Island
Toksook Bay	Kuskokwim/Nelson Island/Nunivak Island
Tununak	Kuskokwim/Nelson Island/Nunivak Island
Cape Yakataga	Prince William Sound/Statewide Troll/ Yakutat
Pikmiktalik	Lower Yukon/Norton Sound

2. The Upper and Lower Yukon and Kuskokwim River fishery areas are based on immediate river drainages. The Lower Yukon area extends up the Yukon River to just above Holy Cross. The Kuskokwim local area extends 30 miles upriver beyond the limit of commercial fishing on that river (sub district W-2 located at approximately 61° 34' 23" N latitude and 159°14'60" W longitude). Using GIS mapping software to verify locality, the following communities changed from local to nonlocal for Area W: Itulilik, Kashegelok, Lime Village, Nogamut, Red Devil, Sleetmute, Sparrevohn, Stony River, Taylor Creek. The Upper Yukon area extends 30 miles upriver from the terminus of District

6C at 64 ° 15’ N latitude, 146° 19’ W longitude. Enforcing this definition changed the status of Big Delta and Tok from local to nonlocal to Area P (Upper Yukon).

3. The Bristol Bay area extends inland up the Nushagak River and includes the entire Tikchik Lake system as well as Lake Iliamna and Lake Clark. Pope-Vannoy Landing is now classified as local to Bristol Bay fisheries under the rule that includes all of Lake Iliamna.

4. The Cook Inlet local area includes all but the eastern edge of the Anchorage Municipality. The line dividing the Cook Inlet and Prince William Sound ADF&G regulatory areas is extended inland directly north. That is, the line runs from Cape Fairfield at 148°50'W, north to 61°36'N and then west to 150°30'W and thereafter follows, at a little distance inland, the western shore of Cook Inlet, ending at Cape Douglas.

5. The Prince William Sound area extends up the Copper River to the confluence of the Bremner River.

6. . The local definitions for the Westward herring fisheries are based on the districts as defined in (5 ACC 27.875 and 5 ACC 27.905) ADF&G Commercial Herring Fishing Regulations and extend 30 miles beyond those district boundaries. The districts are defined as waters bounded by specified coastline features or latitudes. The local/nonlocal definition includes population centers on the coast within those boundaries as well as within a 30-mile radius extending inland and beyond the northern and southern district boundaries. Because the Nelson Island and Nunivak Island districts overlap with respect to latitude and because pre-limitation permitting combined these fisheries, they will share the same local communities for the purposes of this study.

- ARL - Alaska Rural Local
- ARN - Alaska Rural Nonlocal
- AUL - Alaska Urban Local
- AUN - Alaska Urban Nonlocal
- NR - Nonresident
- DCCED/CFAB- Foreclosed by the Department of Commerce, Community, and Economic Development or Commercial Fishing and Agriculture Bank.
- Urban- Alaska Urban Local and Alaska Urban Nonlocal.
- Nonlocal- Alaska Rural Nonlocal, Alaska Urban Nonlocal, and DCCED/CFAB resident types; Nonresident excluded.

- ARN- Alaska Rural Nonlocal.
- AUN- Alaska Urban Nonlocal.
- NR- Nonresident.
- DCCED/CFAB- Department of Commerce, Community, and Economic Development/Commercial Fishing and Agriculture Bank.
- Alaska Local permit holders include both Alaska Rural Local and Alaska Urban Local resident types.
- Nonlocal shift is the sum of Alaska Rural Nonlocal (ARN), Alaska Urban Nonlocal (ARN), and DCCED/CFAB resident types. Nonlocal shift does not include Nonresidents.

APPENDIX F. PERMIT FISHERY ORDERING

APPENDIX F. PERMIT FISHERY ORDERING

Many of the tables in this publication present data on individual permit types. These tables are organized in one of two ways: the permit types are classified by the year in which the fishery was limited (e.g., Tables 2-2 and 3-1), or they are classified by geographic region, species, and then year (e.g., Tables 4-2 and 4-5).

The Table below shows the ordering of permit types in the second method of classification. Each permit fishery is associated with a CFEC fishery code, which is also shown.

Order	Permit Fishery	Permit Fishery Description	Fishery Code
1	Salmon Power Troll	Statewide Salmon Power Troll	S15B
2	Salmon Hand Troll	Statewide Salmon Hand Troll	S05B
3	SE Salmon Seine	Southeast Salmon Purse Seine	S01A
4	SE Salmon Drift Gillnet	Southeast Salmon Drift Gillnet	S03A
5	SE Roe Herring Seine	Southeast Roe Herring Purse Seine	G01A
6	SE Herring Gillnet	Southeast Herring Roe & Food/Bait, Gillnet	G34A
7	NSE Herring Spawn on Kelp Pound	Northern Southeast Herring Spawn on Kelp Pound	L21A
8	SSE Herring Spawn on Kelp Pound	Southern Southeast Herring Spawn on Kelp Pound	L21C
9	NSEI Sablefish Longline	Northern Southeast Sablefish Longline	C61A
10	SSEI Sablefish Longline	Southern Southeast Sablefish Longline	C61C
11	SSEI Sablefish Pots	Southern Southeast Sablefish Pot Gear	C91C
12	SE Red, Blue, King, Crab Pot	Southeast Red King Crab and Blue King Crab Pot Gear	K19A
13	SE Red, Blue, Brown King Crab Pot	Southeast Red King Crab, Blue King Crab, Brown King Crab Pot Gear	K29A
14	SE Brown King Crab Pot	Southeast Brown King Crab Pot Gear	K39A
15	SE Red, Blue King/Tanner Pot	Southeast Red King Crab, Blue King Crab, Tanner Crab Pot Gear	K49A
16	SE Brown King/Tanner Pot	Southeast Brown King Crab and Tanner Crab Pot Gear	K59A
17	SE All King/Tanner Pot	Southeast All King Crab and Tanner Crab Pot Gear	K69A
18	SE Tanner Crab Pot	Southeast Tanner Crab Pot Gear	T19A
19	SE Dungeness Ring Net	Southeast Dungeness Crab Ring Net	D10A
20	SE Dungeness Dive	Southeast Dungeness Crab Dive	D11A
21	SE Dungeness 300 Pot	Southeast Dungeness Crab, 300 Pots	D9AA
22	SE Dungeness 225 Pot	Southeast Dungeness Crab, 225 Pots	D9BA
23	SE Dungeness 150 Pot	Southeast Dungeness Crab, 150 Pots	D9CA
24	SE Dungeness 75 Pot	Southeast Dungeness Crab, 75 Pots	D9DA
25	SE Shrimp Otter Trawl	Southeast Shrimp Otter Trawl	P07A
26	SE Shrimp Beam Trawl	Southeast Shrimp Beam Trawl	P17A
27	SE Shrimp Pot	Southeast Shrimp Pot Gear	P91A
28	SE Urchin Dive	Southeast Urchin Diving Gear	U11A
29	SE Geoduck Dive	Southeast Geoduck Diving Gear	J11A
30	SE Cucumber Dive	Southeast Cucumber Diving Gear	Q11A
