December 2006

The Division of Sport Fish Fishery Management Reports series was established in 1989 for the publication of an overview of Division of Sport Fish management activities and goals in a specific geographic area. Since 2004, the Division of Commercial Fisheries has also used the Fishery Management Report series. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.sf.adfg.state.ak.us/statewide/divreports/html/intersearch.cfm>. This publication has undergone regional peer review.

ABSTRACT

The Western Section of the South Peninsula District will open for a commercial Tanner crab *Chionoecetes bairdi* fishery on January 15, 2007 with a guideline harvest level of 200,000 pounds. This report provides a brief historic overview of the fishery and summarizes the harvest strategy for South Peninsula Tanner crabs. Information on tank inspections, inseason reporting, pot storage, landing requirements, gear operation hours, and contact personnel within the Alaska Department of Fish and Game, Fish and Wildlife Protection and the Commercial Fisheries Entry Commission are also provided. Harvesters are encouraged to use this document as a supplement to the 2006-2008 Commercial King and Tanner Crab Fishing Regulations.

Key words: South Peninsula District, Tanner crab fishery, *Chionoecetes bairdi*, harvest strategy, regulations

INTRODUCTION

The South Peninsula District of Registration Area J for Tanner crabs *Chionoecetes bairdi* includes all Pacific Ocean waters south of the Alaska Peninsula, west of the line from Kupreanof Point to the easternmost point of Castle Rock, then extending 135° southeast from the easternmost point of Castle Rock and east of the longitude of Scotch Cap Light (Figure 1). A full description of the district can be found at 5 AAC 35.505 DESCRIPTION OF REGISTRATION AREA J DISTRICTS on pages 138-139 of the 2006-2008 Commercial King and Tanner Crab Fishing Regulations, which will be referred to as crab regulations. The South Peninsula District is divided into two sections, the Eastern (all waters east of 162° W. long) and the Western (all waters west of 162° W. long.) The South Peninsula District is a nonexclusive registration area for Tanner crabs.

Figure 1.—South Peninsula Tanner crab fishing District, 2007.

OVERVIEW

The first commercial harvest of Tanner crabs from the South Peninsula District occurred in 1967 with 3,100 pounds landed. The fishery grew quickly, and by 1973, the harvest exceeded five million pounds (Table 1). In 1973, the Alaska Department of Fish and Game (ADF&G) initiated a pot survey to estimate relative abundance, predict recruitment trends and develop annual harvest levels. In 1975, ADF&G implemented an April 30 season closure to protect crab at the onset of the mating and molting season. In 1976, the minimum size limit of 5.5 inches carapace width (CW) was established. During the six fishing seasons from 1974 through 1978/79, harvests ranged from five to almost nine million pounds. From 1979 to 1984, harvest and catch per unit effort (CPUE) declined. In the 1983/84 season, the fleet landed just under two million pounds. Recruitment improved between 1985 and 1988 and harvest ranged from about two million to four million pounds. Harvest decreased to slightly more than one million pounds in 1988/89 and indications from the trawl survey data predicted a decline in recruitment for future years. The fishery was closed from 1990 through 2000 due to low abundance of legal-sized crabs and lack of recruitment.

In 1999, ADF&G presented the Alaska Board of Fisheries (BOF) with a comprehensive harvest strategy for Tanner crabs in the South Peninsula District. The BOF also established a minimum threshold of crab abundance that must be met to allow for a commercial Tanner crab fishery (Urban et al. 1999). The harvest strategy established a stair-step pot limit of 30, 40, or 75 pots per vessel depending on Guideline Harvest Level (GHL). A vessel size limit of 58 feet overall length was also in effect for the South Peninsula District. The harvest strategy, as adopted by the BOF, can be found under 5 AAC 35.507 KODIAK, CHIGNIK, AND SOUTH PENINSULA DISTRICTS, *C. BAIRDI* TANNER CRAB HARVEST STRATEGIES in the crab regulations.

RECENT FISHERIES

Prior to 2001, the Tanner crab commercial fishery in the South Peninsula District had not opened for over 10-years due to low stock abundance. In 2002, 2003, and 2004 the fishery in the South Peninsula District remained closed due to low stock abundance. In 2005, the BOF added regulations dividing the South Peninsula District into the Eastern and Western Sections. The 2006 fishery was the first to be managed as two sections.

2001 Fishery

The South Peninsula District met the required regulatory harvest strategy criteria for a commercial Tanner crab opening in 2001. A 375,000 pound GHL was established for the district. The fishery opened at 12:00 NOON on January 15, 2001 and closed on January 18, 2001 at 7:59 PM, for a total fishing time of 44 hours. The harvest for the 2001 fishery was 258,631 pounds from 67 landings. Estimated exvessel value for the fishery was \$209,194.

2005 Fishery

The South Peninsula District met the required regulatory harvest strategy criteria for a commercial Tanner crab fishery opening in 2005. A 300,000 pound GHL was established for the district. The fishery opened at 12:00 NOON on January 15, 2005 and closed on February 11, 2005 at 5:59 PM. The harvest for the 2005 fishery was 295,055 pounds from 68 landings for an estimated exvessel value of \$491,385.

2006 Fishery

The South Peninsula District met the required regulatory harvest strategy criteria for a commercial Tanner crab fishery opening in the Western Section in 2006. The Eastern Section

did not meet established criteria, therefore did not open in 2006. A 290,000 pound GHL was established for the Western Section of the district. The fishery opened at 12:00 NOON on January 15, 2006 and closed on February 17, 2006 at 5:59 PM. The harvest for the 2006 fishery was 287,749 pounds from 47 landings for an estimated exvessel value of \$348,093.

REGULATIONS

OVERVIEW

Tanner crab regulations in the State of Alaska can be found in chapter 35 of the Alaska Administrative Code (AAC). Chapter 35 begins on page 119 of the 2006-2008 crab regulations. Specific regulations that pertain to Tanner crab fisheries in Registration Area J begin on page 138. The harvest strategy, 5 AAC 35.507 KODIAK, CHIGNIK, AND SOUTH PENINSULA DISTRICTS, C. *BAIRDI* TANNER CRAB HARVEST STRATEGIES, can be found on pages 140-142 of the crab regulations. Some of the regulations regarding Tanner crab fishing are summarized below, particularly those that have changed as a result of BOF actions. For additional information on regulations, contact the ADF&G office in Kodiak and refer to the crab regulations (available at ADF&G offices or at our website: <http://www.state.ak.us/adfg/>). The following is an overview of Tanner crab fishing regulations in the South Peninsula District:

- The South Peninsula District has been divided into two sections, Eastern (all waters east of 162° W. long.) and Western (all waters west of 162° W. long.) under 5 AAC 35.505 DESCRIPTION OF REGISTRATION AREA J DISTRICTS (b)(1&2).
- When the district GHL is less than 600,000 pounds, **the pot limit is 30 pots per vessel**, 5 AAC 35.525 LAWFUL GEAR FOR REGISTRATION AREA J (c)(3)(A&B).
- **Fishing gear may be operated for 10 hours each day from 8:00 AM to 5:59 PM.** Baited gear may be left in the water for 14 hours from 6:00 PM to 7:59 AM each night, 5 AAC 35.510 FISHING SEASONS FOR REGISTRATION AREA J (c).
- **A person or vessel that operates pot gear (e.g., cod pots, subsistence pots, etc.) 14 days prior to the South Peninsula District Tanner crab fishery opening may not participate in the upcoming commercial Tanner crab fishery**, 5 AAC 35.053 OPERATION OF OTHER POT GEAR.
- **A vessel may not operate groundfish pots while registered for the commercial Tanner crab fishery, including pots to catch cod for bait.** 5 AAC 35.053 LAWFUL GEAR FOR TANNER CRAB. Cod caught as bycatch in crab pots may be used for bait.
- **Only vessels 58' or less may participate in the commercial Tanner crab fishery in the South Peninsula District.** 5 AAC 35.590 VESSEL LENGTH RESTRICTIONS (b)

2007 GUIDELINE HARVEST LEVEL

The GHL for the South Peninsula District Western Section is 200,000 pounds. The Eastern Section of the South Peninsula District is closed for 2007.

Figure 2.—Number of mature male Tanner crabs per kilometer towed in the 2005 South Peninsula trawl survey.

Parts of the Western Section may close prior to the entire section closure, if harvest in that area approaches the trawl survey biomass estimates. As an example, Cold Bay/Lenard Harbor will close when harvest approaches 13,000 pounds. The fishery will close in the entire Western Section when ADF&G determines that the GHL is achieved or when the observed harvest indicate a threat to the long-term health of the stock, such as low catch per pot or excessive bycatch of female or sublegal male Tanner crabs. The regulatory season closure date is March 31.

POT LIMITS AND BUOY TAGS

When the district GHL is less than 600,000 pounds, no more than 30 aggregate pots (including stored pots) may be operated from a validly registered Tanner crab vessel. When the district GHL is between 600,000 pounds and less than 1,000,000 pounds, no more than 40 pots may be operated. When the district GHL is greater than 1,000,000 pounds up to 75 pots may be used. **The pot limit for the 2007 South Peninsula District fishery will be 30 pots per vessel.**

Tags will be available for purchase beginning in mid-December at a cost of \$1.50 per tag. A valid 2007 South Peninsula District Tanner crab Commercial Fisheries Entry Commission

(CFEC) permit card (T09M) is required to purchase tags. Tags will be sold at the ADF&G office in Kodiak; ADF&G representatives will sell tags in King Cove beginning approximately January 10th. Participants can purchase tags via U.S. Mail until December 31. No tags will be mailed after this date; call the ADF&G office in Kodiak for details at (907) 486-1840. Appendix B contains additional contact information.

Replacement tags may be obtained by contacting ADF&G in Kodiak. The vessel owner, operator, or agent must complete an affidavit form describing how the tags were lost and supply the unique number(s) of each lost tag. Replacement tags cost \$1.50 per tag.

Pots with lost tags must be secured open with the bait removed until replacement tags are obtained. Vessel operators must contact Alaska State Troopers Bureau of Wildlife Enforcement to inform them of the situation (see Appendix B for contact information).

GEAR

Gear for the commercial Tanner crab fishery is limited to pots no more than 10 feet long by 10 feet wide by 42 inches high with rigid tunnel eye openings that are less than five inches in height. Tunnel eye opening perimeters must be individually more than 36 inches. Ring nets are not legal gear in the South Peninsula District for the commercial harvest of Tanner crabs. The specific language regarding legal pot dimensions can be found under 5 AAC 35.050 **LAWFUL GEAR FOR TANNER CRAB** on page 123 of the crab regulations.

ESCAPE MECHANISMS

Escape mesh or escape rings are required for Tanner pots. Each pot used to take Tanner crabs must have at least one third of one vertical surface of the pot composed of not less than 7-1/4 inch stretched mesh webbing or have no less than four circular escape rings which have an inside diameter of at least five inches. If using rings, they must be installed on the vertical plane of the pot to allow for escapement of undersized and female crabs. The rings are not required to be placed within a certain distance from the bottom as they are in some Bering Sea fisheries. However, ADF&G recommends placing rings within one mesh of the bottom of the pot to optimize escapement of undersized crabs. The specific language on escape device requirements can be found under 5 AAC 35.525 **LAWFUL GEAR FOR REGISTRATION AREA J** on page 147 of the crab regulations.

All pots must be equipped with a biodegradable escape mechanism as described in 5 AAC 39.145 **ESCAPE MECHANISM FOR SHELLFISH AND BOTTOMFISH POTS** on page 57 of the crab regulations. An opening 18 inches or greater in length that is placed within six inches of the bottom of the pot must be laced, sewn, or secured together by a single length of untreated, 100 percent cotton twine no larger than 30 thread.

Alternately, a sidewall, which may include a tunnel, must contain an opening at least 18 inches in length that is laced, sewn or secured together by a single length of treated or untreated twine, no longer than 36 thread. A galvanic timed release (GTR) device, designed to release in no more than 30 days in salt water, must be integral to the length of twine so that, when the device releases, the twine will no longer secure or obstruct the opening of the pot. The twine may be knotted only at each end and at the attachment points on the GTR device. The opening must be within six inches of the bottom of the pot and must be parallel with it. The twine may not be tied or looped around the web bars.

BUOY TAGS AND MARKING REQUIREMENTS

Buoys attached to pots must comply with 5 AAC 35.051 TANNER CRAB GEAR MARKING REQUIREMENTS listed on page 123. Buoy tags are required for each pot as specified in 5 AAC 35.526 TANNER CRAB POT MARKING REQUIREMENTS FOR REGISTRATION AREA J on page 148 of the crab regulations. The buoy that contains the ADF&G number may not be marked with additional numbers; however, symbols and letters are acceptable on this buoy. Trailer or other buoys used to mark ownership or string sequence may be marked with any desired numbers, symbols, or letters.

The use of converted pots as ‘storage boxes’ to store crabs in the water for vessels registered as dry tanked vessels is not permitted unless crab storage devices are attached to the vessel at all times.

OPERATION OF OTHER POT GEAR, POT STORAGE, AND LANDING REQUIREMENTS

There is a 14-day stand down period for the operation of pot gear prior to the commercial Tanner crab fishery opening in the South Peninsula District. No person or vessel that will participate in the commercial Tanner crab fishery may operate commercial, subsistence, sport, or personal use pots for any species within the district during that 14-day period.

Legal Tanner crab pots with buoy tags attached **may be** placed into shallow water storage during the 14-day stand down period. Up to 30 pots may be stored prior to the season in waters of 25 fathoms or less with all bait and bait containers removed and the doors secured fully open (or not secured closed for cone or pyramid pots; 5 AAC 35.527(3) & 5 AAC 35.052). However, vessels may not retrieve gear already in legal storage to put tags on this gear during the 14-day stand down period. In addition, vessels **will not** be allowed to retrieve gear from storage during the 24-hour period after tank inspection, but before the fishery opening, due to enforcement concerns. At the time of tank inspection, all gear onboard and in the water must have buoy tags affixed.

No vessel may have more than the specified pot limit onboard or in wet storage in the registration district while the vessel is validly registered. The regulatory language concerning pot storage can be found at 5 AAC 35.527 TANNER CRAB POT STORAGE REQUIREMENTS FOR REGISTRATION AREA J on page 149 of the crab regulations.

After the closure of the Tanner crab season, vessels wishing to participate in the Pacific cod fishery must either place pots into shallow-water storage or on land and register with ADF&G for the cod fishery. Additional stipulations on the operation of other pot gear within the South Peninsula District can be found under 5 AAC 35.053 OPERATION OF OTHER POT GEAR on page 124 of the crab regulations.

SUMMARY OF CLOSURE SCENARIOS

Delivery requirements, post-closure pot storage requirements, and re-registration requirements vary depending on the type of area closure and the amount of notice given. The following is a summary of closure scenarios, subsequent pot storage options, delivery requirements, and re-registration requirements contained in 5 AAC 35.030, 5 AAC 35.031, 5 AAC 35.052, 5 AAC 35.527, and 5 AAC 35.556.

Closure of the entire section with 6 or more hours notice of the closure given.

In 2007, the Eastern Section is closed; therefore, closure of the Western Section is the same as an entire District closure and regulations for the District closure will apply.

- Vessel operators are required to deliver all catch from the section within 24 hours of the closure.
- In the South Peninsula District, pots may be stored in the water up to **7 days** after the closure of the commercial Tanner crab season. (5 AAC 35.527 (3)).

Closure of the entire section with less than 6 hours advance notice of the closure given.

- Vessel operators are required to proceed directly to port at the time of the closure and deliver within 24 hours.
- Vessel operators may not place gear in storage or retrieve pots from storage until they have completed their delivery of crabs from the closed section.
- Vessel operators are required to return to the fishing grounds within 72 hours after their delivery to ‘rail dump’ all crab from baited gear left on the grounds.

Partial closure of a fishing section with 6 or more hours notice of the closure given.

An example of a partial closure of a fishing section would be when inner bays within the Western Section close prior to the outside waters.

- Vessel operators may be required to deliver all crabs from the section within 24 hours of the closure. Any changes to the delivery requirement would be provided in a news release at the time of the closure announcement.
- Vessel operators may store pots in waters deeper than 25 fathoms for 72 hours in the closed waters of the section.
- Vessel operators may place, or simultaneously have, baited gear in the open waters of the same section before delivery provided the 24 hour delivery deadline is met.

Partial closure of a fishing section with less than 6 hours notice of the closure given.

This scenario is highly unlikely. Should this type of closure occur the landing, pot storage, and re-registration requirements will be provided in a news release.

Vessel operators wishing to deliver to ports outside the district are required to contact the ADF&G office in Kodiak, or ADF&G personnel in King Cove if available, before leaving the district. Vessels delivering outside the district must provide the estimated number of crabs onboard the vessel at the time of the closure, location of port and processing facility, and estimated time of arrival. Additional requirements exist for catcher-processors and vessels mechanically disabled. Cases of delay due to circumstances of weather will be addressed on an individual basis (5 AAC 35.031 TANNER CRAB LANDING REQUIREMENTS page 121-122 of the crab regulations).

VESSEL SIZE RESTRICTIONS, REGISTRATION, TENDERS, AND TANK INSPECTIONS

Tanner crab may not be taken in the South Peninsula District by vessels over 58 feet in overall length (5 AAC 35.590(b) VESSEL LENGTH RESTRICTIONS page 151 of the crab regulations). Vessel operators participating in the 2007 South Peninsula Tanner crab fishery must have a 2007 permit card for Area M Tanner crab and a current 2007 commercial vessel license. Permits and vessel licenses can be obtained from the CFEC in Juneau.

Tender vessels must register with ADF&G before beginning tendering operations. Tender vessels may not have a pot-hauling block or other crab fishing gear (e.g. pots) onboard nor may they be used to harvest Tanner crab.

Tank inspections are required for vessels with a circulating sea water system to confirm that no crabs are onboard the vessel prior to the opening. Circulating sea water systems include on-deck containers with water circulated by pumps, hoses, or other means. Gear will also be inspected at the time of tank inspection to ensure it is in compliance with all gear regulations. Tanks will be inspected beginning at 12:00 NOON on January 14 in King Cove. Upon completion of the tank and gear inspection process, a valid 2007 shellfish registration will be issued to the vessel. A copy of this registration must remain onboard the vessel while fishing. This registration becomes invalid 24 hours after the closure of the fishery. Vessels must invalidate their registration before participating in other fisheries if the Tanner fishery remains open.

SIZE LIMIT

The legal minimum size of Tanner crabs that can be harvested in the South Peninsula District is 5.5 inches (140 mm) CW. Only legal-size male crabs can be retained; all other crabs incidentally captured must be immediately returned to the water unharmed. This includes king crab, as they cannot be legally taken in a commercial Tanner crab fishery for subsistence purposes.

VOLUNTEER CATCH REPORTING

ADF&G will manage the South Peninsula District commercial Tanner crab fishery from inseason catch reports provided by fishers. Inseason management allows for real-time fishery decisions and the ability to consider changes in effort, fleet behavior, and weather. ADF&G will make every effort to allow sufficient time for fishers to configure gear for storage or to place gear onboard before a closure; however, the potential exists for a short advance notice closure.

Any validly registered vessel may participate in the reporting process and each registering vessel will be issued a 2007 reporting code and worksheet at registration. Reports will be taken over marine VHF channel 6 (King Cove), single sideband (SSB) 4125 kHz, telephone, satellite dispatch system, and e-mail. The ADF&G Kodiak office has both Matrix¹ (# 7894) and Stratos¹ (# 0083) dispatch services. Vessel operators will be asked during the registration process which method they will use to submit daily reports.

Contents of the daily report will contain confidential codes for the section in which the vessel operator is fishing, statistical area, number of pot lifts, and number of crabs retained for each 10-hour fishing period. Reports will initially be taken at 6:30 PM daily and may be transmitted via SSB, marine telex, e-mail, satellite dispatch, and satellite or cell phone. If inside areas close, ADF&G may change the reporting schedule to 9:00 AM.

ADF&G will update the fleet on SSB 4125 kHz with the fishery status each morning at 8:30 AM. Any closure announcement or change in the reporting schedule will be made on this frequency. Current fishery status will also be available on the ADF&G recorded information phone in Kodiak at 486-4559, option 2. Messages on the recorded information phone will be updated daily after the 8:30 AM updates. Updates, changes to the reporting schedule and closure

¹ Use of trade names does not constitute an endorsement by ADF&G.

announcements will be distributed via e-mail, FAX, and passed along to all participating processing facilities.

FISHERY MANAGEMENT PLAN

The 2007 South Peninsula Tanner crab fishery will open in the Western Section at NOON on January 15, 2007. The Eastern Section will not open in 2007. Individual bays and areas, such as Cold Bay and Lenard Harbor, may be managed separately; one portion of the section may close while harvest is allowed in other locations within the same section. Partial closures may occur after very little fishing time (possibly within the first full day of fishing) and with short notice.

Details of the tank inspection process, updates on inseason reporting, and other fishery related information will be forthcoming in ADF&G news releases.
