GASOLINE ENGINES

History of---

The first alloy especially developed for salt water service. Tobin Bronze was installed in the first naphtha launch in 1885. Today this alloy is still popular with the boating world, and has been used continuously and in increasing quantities for marine propeller shafting.

Bearings live longer when your propeller shaft is Tobin Bronze. Every shaft is precision-turned to close dimensional tolerances. Smooth surfaces promote free-running operation, and special straightening keeps vibration down. The result is less friction, less wear, at bearing points.
