may16a	A beautiful sunny day - Am already	
	[to] go to Chena today at 1 oclock on the	
	[Is]abella, where we will embark on the	
	["Tanana Chief" on our journey to Mt	
	McKinley.	
	We loaded " <u>Mark</u> " and " <u>Hannah</u> ", on	
	pack mules, on the "Isabella" at Fairbanks	
	at noon, and at one oclock we boarded	
	that craft with 115 other persons going on an	
	excursion to Chena - to see us off on our	
	trip and - evidently - to show the people of the	
	town that as steamboat <u>could</u>	
	navigate the Chena river. We had music	
	aboard $\underline{\&}$ singing. Received a note from	
	Mr. Hendricks just as we were embarki[ng]	
	[say]ing that he would leave Chena	
	with his boat at once - so we will	
	[m?]ake close connection.	
Diary 6, 1903	- made a quick and flying trip and	
may16b	to Chena and found the "Tanana Chief" with	
	steam up waiting for us. Excursionists	
	seemed to enjoy the town - we procured on	
	supplies - plenty of flour, bacon, beans,	
	box dried apples, <u>do</u> , dried prunes, 300 ft	
	of $\frac{1}{2}$ in rope - non alpen stocks, muck=	
	lucks. 100 lb rolled oats for the mules &c.	
	After the Fairbanks excursion left, we	
	loaded - the mules and supplies into	
	a small barge ahead of the Chief &	
	a small barge aread of the Chief & after a good dinner with Mrs. Currier	
	8	
	- Mr Hendricks, Stevens, George & I, -our	
	boat left Chena at 9.30 p.m. for	
	down river. Did not pay for my outfit,

	question, that he would charge nothing for
	putting us up the Kantishna river -
	that he desired to do that much to assist
	in our efforts to reach the summit of the
	highest mountain in North America.
	Cleary also gave us such supplies as he had
	at Fairbanks & brought us all down
	on the "Isabella" in the same spirit.
	Robertson & Scott loaned us the mules
	cheap, on the same grounds. Altogeth[er]

	took the " <u>Jennie M</u> ", a small steamer
	belonging to Belt & Hendricks fleet, also
	going down to Weare for supplies for them.
	During the late winter they moved a large
	amount of supplies across the Yukon to
	the east bank of the Tanana, and now that
	the latter is open they will supply the mines
	from that source until the Yukon opens.

	a splendid good packer, hunter, boatman
	and guide. <u>John M McLeod</u> , a native
	of Liard river country - who has lived on the
	Mackenzie and Yukon, all his life - 26
	years old. Johnnie was guide for Prof-

	now within well defined bluffs at
	two miles distance on either side - though
	here at our camp tonight we cannot
	see the east bluff as we think the
	Too-tlat valley extends the distance.
	Mountains begin to look close, though
	we are yet in a perfectly level country

	Mt. Chitsiah is the most prominent feature
	in the Kantishna and To-tlat river landscapes.
	It is the most sounortherly mountain of the rugged
	range which extends due south between the two
	rivers to McKinley. No other peak for 15 or
	20 miles around is so high - its name - Chitsiah
	means " <u>Heart</u> " in the Indian tongue - and {as} it is
	exactly the shape of the point of the heart and
	being both very appropriate and euphonious
	we have adopted it as the permanent name.
	It is about 3500 or 4000 feet high - is very
	steep - but approachable along these sharp
	divides, and up a steep rocky incline.
	We approached its summit by the southerly
	and best incline. The view from this
	peak is superb. For seventy five miles
	you can see the entire country to the north
	and west - even to the extreme south west
Diary 6, 1903	and almost to the eastward. It is
june02d	a grand view of a wide level table land
Juneoza	dotted with innumerable small lakes -
	you see the To-tlat at your feet, from its
	mountain gorges in the south west to where
	it joins the Kantishna - due north from
	the mountain. The To-tlat valley is probably
	10 miles wide - on the east side of the river-
	on the west side it lies close to the mountains.
	Its bed is yet filled with ice, through which
	the river has cut many channels - it is a
	typical Arctic river - and differs greatly
	from the Kantishna, which is a wide & timber
	covered country. The Kantishna rises in a
	wide low country to the west & south west
	- the Kuskokwim evidently rises in the same
	low country & flows west. We built a
	stone cairn on Mt. Chitsiah, flung the
	stars & stripes to the breeze - made such
	rough maps as we needed & came down

	Stevens had the field glasses & kept
	calling my attention to the bear! "Don't

	plainly, but no bear and after a time

	just where we intended to camp - we made
	our camp between them on a sloping hill
	side. The chances for reaching the
	summit seem now better than ever - We
	are at least 4000 feet high in the camp
	& the glacier continues to rise as it rounds
	the mountain & it now seems as if we can
	reach the high ridge we want. Will start
	on the upward climb tomorrow morning
	so as to avoid the snowslides. Waded
	muddy glacial streams to get here,
	& have just had a fine supper of
	cariboo & flap jacks - changed my
	socks & feel better. No tent tonight

	striking fire- electric - gathering other masses -
	striking juting point, rock, sand, snow & ice,

	a hundred great guns, cover the medial

	We are in a bad place – ahead of us is a
	very sharp ridge, covered with snow & so steep
	that it seems impossible to me. From our
	loft height – about 10000 feet – one realizes what
	an enormous glacier this great McKinly glacier is
	It reaches a narrow pass just above where
	we left it, and above that spreads out into
	an enormous glacial field reaching around
	to the south side of the mountain – it travels
	more than one half around the mountain.
	It is now half a past 2 and a thunderstorm
	threatens us from the Kantishna flats – it would
	make climbing an impossibility – as it would
	increase the volume and number of the avalanches
	- these are by the hundred & hardly a moment
	goes by without the thundrous noise of one
	tearing its way down the mountain side.

MS 107 Diary 6	
	The days are so hot and the temperature
	so productive of avalanches that we have
	had to do all our work at night when the
	heat is less liable to produce slides of
	snow and glacial ice. We left one high
	point on the mountain last night at 9.
	pm. but I was then convinced that no
	possibility existed of our overcoming the
	apparent obstacles to our higher climb
	- we were climbing on a spur as sharp as
	a house roof, rapidly rising to where it was
	nearly perpendicular – solid glare ice,
	and above it rose thousands of feet of
	glacial ice undermined and even falling
	0
	bay reason of the hot weather & constant
	sliding out of the softer snow. I
	had watched this constant loss of support
	all day and it was so apparent to
Diary 6, 1903	me that further effort was futile that I
june21b	declined to go farther – to the evident relief
	of Stevens who agreed with me that no
	man could reach the summit in the
	present condition of the mountains. It
	is ice encrusted from summit to base -
	- in most places glaciers exist in every
	small niche, and they are so undermin
	=ed now by the constant warm west winds
	of two or three days past – that hundreds
	of slides are coming down in every
	direction – every moment the swish
	of a snow avalanche, or the thunder
	of a glacial ice slide is heard. Even
	the smallest would be fatal to our
	whole party in the position we occupied –
	they were then in motion ahead, and
D' (1002	I ordered a retreat to our camp.
Diary 6, 1903	I offered to remain in camp & let any
june21c	or all of the others make an effort, if
	they desired, but each personally declined
	to take any further risk. In the condition
	of the mountain an attempt in another
	quarter would be equally as dangerous
	so we abandoned the whole effort to
	reach the summit. We returned to our
	former camp – from which we started
	Friday night & will go back to the
	lower camp today. Will continue to
	examine the streams & glaciers for
	geographical information.
	Had a sleep – from 5 am. until
	noon & went back to lower camp
	at lower end of old moraine. Passed
	band of cariboo & took photographs
	at close range owing to their curiosity

MS 107 Diary Diary 6, 1903 june27c	6 The McKinley river is now in pretty well defined banks and we hope to reach the Kantishna tomorrow. The boys came through with the raft & luckily we came together & are camped all together on a bar. River now running due north. [captions:] Camp June 28. Eagle Gorge Camp June 27. For lunch this afternoon we had rabbit roasted – and nothing else – even without salt. River running north & as placid as the Kantishna – The bars and sands are getting more solid & there is less danger of quicksand. Hope we can reach Kantishna tomorrow,
	wide sandbar – mile or more – cut by numerous channels. A mile above our camp of 27 th the river formerly cut- across country to the right & north of the present channel. Our camp last night is near this old channel & McLeod & I will follow it with the horses. Our flour is going fast. McLeod killed a goose last night which gave us supper & is now out examining some rabbit snares for breakfast – <u>if</u> . Since losing the pots frying pans, &c in the wreck we have had to cook "bannacks" in Indian	Diary 6, 1903 june29a	for we have but a few pounds of flour left. <u>Clear June 29th</u> <u>Monday</u> We are in the finest moose country in the world! We camped on the bar where the big bull moose crossed last night & while we are now eating our breakfast a big moose cow and <u>two calves</u> are walking parallel to us on the bar the other side of the river – 200 yards away and in plain sight. It is a great pleasure to see the calves frisk & play & suckle and rush

Came about 10 miles & are camped on a bar with strong wind blowing – hope for a night free from mesquitos, which trouble us greatly. Shot two geese & a rabbit. The three men on the raft have gone on to the mouth {junction} of the Kantishna & we are to meet them there. McLeod gave an exhibition of his cunning in killing rabbits: He saw one run ahead of us into the bushes, and giving me the leading rope to hold he went 50 feet ahead &		camp about 8 oclock & from the shape of the hills ahead judged that we could strike the Kantishna about noon – but alas! we were disappointed for we passed the hills & no Kantishna appeared. We were much dejected for the interminable mazes of the thickets of brush were hard on our bodies & it seemed as if we must travel on 20 miles more to catch the raft. We started on but while eating our lunch at noon discovered a big fire a few miles ahead & were soon after met by Webb looking for us – We found them

	of McKinley & Kantishna on the 28th.
	Before they left us Stevens told McLeod
	that they would not wait long for us - that
	provisions were about gone and that they
	would only wait 2 days and a half and
	then go on with the raft and leave us -
	McLeod repeated this to me and upon inquiry
	Stevens & George both said the same to me.
	This so frightened McLeod that he would
	not let then have his 44 gun nor the

	the rest of the crowd to Seattle, and
	thence back to Valdez - I really feel
	sorry for her - she is so evidently bitterly
	disappointed. Mrs. Claypool is
	also here waiting for the Ohio - which
	will now sail about the 19th or 20th
	We do not have to reach Bristol
