## TRIANGLE BUILDING SUPPLEMENT

VOL. XXXV., NO. 5269.

JUNEAU, ALASKA, MONDAY, DECEMBER 2, 1929.

MEMBER OF ASSOCIATED PRESS

PRICE TEN CENTS

### WARRACK BUILDS FOR ALASKANS IN MANY LOCALITIES

Construction Company Has Long String of Creditable Buildings

OVER ONE MILLION DOLLARS WORTH OF CONSTRUCTION DONE

One Department Gives Special Attention to Alaska Plans, etc.

J. B. WARRACK  
Of the Warrack Construction Company

The first building project handled by the Warrack Construction Co. was the Commercial Building of Ketchikan, 1920, which houses the City & Merchants Bank, Cable Office, Forestry and Light House services, as well as other stores and offices. This was followed by the Heckman Department store of Ketchikan, a reinforced concrete structure, and the new Cold Storage building.

The Petersburg public school was built in 1923, the bond issue being handled by the Company, as well as the supervision of plans and the construction.

(Continued on Page Four)

### FINE COMPLIMENT PAID CONTRACTOR BY TRIANGLE OWNERS

"Mr. Nelson and myself were singularly fortunate in finding Warrack Construction Company the low bidder. The contractor has not skimped anywhere. He has given us more than he agreed to. Mr. Warrack's problem has never been how little he could do to comply with the contract, but how much he could do to give us a better building. He came here with a fine reputation from Ketchikan, and leaves here with a still finer reputation for intelligence and integrity as a contractor and builder."

JOHN RUSTGARD.

### PLUMBING AND HEATING BEST UPON MARKET

Rice & Ahlers Company  
Perfect Triangle Building with Latest System

By GEORGE B. RICE,  
President, Rice & Ahlers Co.

The construction of such a building as the Triangle calls for more than concrete, steel and wood. First came faith and courage—N. G. Nelson and John Rustgard had faith in the future of Juneau and Alaska—and they had the courage to go ahead, and today a monument of concrete, steel, faith and courage stands where one year ago stood a few tumble-down shacks.

These men are Alaska's Alaskans in the broadest sense of the word. They have pointed the way for other Alaskans who have made a

(Continued on Page Four)

### JUNEAU'S NEWEST STORE, OFFICE AND APARTMENT BUILDING

TRIANGLE BUILDING

### Resolution

WHEREAS, the Triangle Building, the modern, concrete, fire-proof structure just completed on the corner of Franklin and Front Street, is a fine asset to Juneau, adding much to its appearance and its conveniences; and

WHEREAS, the Honorable John Rustgard and N. G. Nelson have displayed public spirited enterprise and faith in the community in constructing such a building; and

WHEREAS, Mr. J. B. Warrack, contractor and builder has demonstrated his ability in his profession by completing such a fine building on time and according to the letter of the contract;

NOW, THEREFORE, Be It Resolved by the Juneau Chamber of Commerce, that Messrs. Rustgard, Nelson and Warrack be commended individually and collectively for their part or parts in this enterprise.

Passed and approved this 14th day of November, 1929.

H. L. FAULKNER,  
President.

Attest:

H. G. WALMSLEY,  
Secretary.

### TRIANGLE BUILDING IS MONUMENT TO GROWTH, ALASKA, CAPITAL CITY

### NELSON, MINER MERCHANT AND REAL BUILDER

Co-owner of Triangle Building Has Striking Career in the Territory

N. G. NELSON  
Co-owner with John Rustgard in Triangle Building

Miner, merchant and builder, such has been the career of N. G. Nelson, co-partner with John Rustgard in the new Triangle Building located at the corner of Front and Franklin Streets, a three-story concrete and steel structure just completed by the Warrack Construction Company.

He started for the Shushana strike in 1913, but met returning stampedeers at Cordova and turned back. He came on down the coast and entered business here, opening a men's furnishing store. This he conducted until 1921. When Nenana was at the height of its railroad construction boom, in 1918, he opened a similar business there, but closed it down after one year.

In 1921, Mr. Nelson sold out his local interests and left the Territory for a brief time which he spent in Seattle and Los Angeles. He returned to Alaska in 1922, to Ketchikan where he was manager of the men's furnishings department of Tongass Trading Company for one year. At the end of that time, he purchased the Pioneer Hotel and operated it until it was destroyed by fire in 1926. He immediately constructed the Nelson Hotel, a structure 60x100 feet, three stories high. After that was completed he took a lease on the ground on which now stands the Marine Building. This he built and now owns. It

(Continued on Page Four)

A monument to the growth of business and industry of Alaska and its capital city, Juneau, is the fine, new, business block, known as the Triangle Building, situated on the triangular shaped lot at the intersection of Front Street and Franklin Street.

The erection and completion of this building, representing a capital outlay of nearly \$100,000 for land, building and furnishings, was brought about as a result of the progressive spirit of two far-seeing men of Juneau, business men, who, seeing the time had come when this city had outgrown its present requirements for modern quarters, and having the desire to build something of the best of its kind in the Territory, proceeded with plans and specifications early in the year 1929.

The architects, Rueger and Brady, both of whom are licensed under the laws of the State of Washington, submitted four studies of floor layouts to the owners for their study and selection. Due to the unusual shape of the lot, many hours of planning, re-planning and conference was had between the owners and architects, before the final adoption of the present plans.

#### Modification of Classics

The architects followed the usual modification of the classics in their design for the exterior and the result is a pleasing and imposing looking edifice for the purpose to which it will be put.

Bids were taken by the owners in the late spring, and the Warrack Construction Company was found to be the lowest and therefore successful bidder. Work started about June 1, and in spite of the almost continuous drizzling rain, construction proceeded apace. Juneau's summer for 1929 failed to appear and the contractors found themselves inconvenienced in many ways by the unusually wet weather.

#### Interesting Description

yet it might be interesting to some, to know that the concrete used on this building tested higher in compressive strength than is usual. The City of Seattle requirement for reinforced concrete is 2,000 pounds per square inch, crushing strength. The Triangle Building concrete test cylinders crushed at 2700 pounds, or 700 pounds higher than Seattle requirements.

The reinforced concrete floors and beams have been loaded to two and one-half times the standard live load figured for this type of building, and no deflection could be noted.

#### Much Street Frontage

This building has a total street frontage of over 200 feet, a total floor area of over 12,000 square feet and its cubical contents measure approximately 160,000 cubic feet.

The ground floor and street frontages have been given over to four stores, all of which have been designed to give maximum of light and ventilation. A handsome marquee of steel and iron extends across the entire Front Street facade.

The entrance to the second and third floors, is on Franklin street, and is dignified in appearance, surmounted by an ornamental canopy of copper.

Office Floor  
The second floor has twelve large

(Continued on Page Four)

### FAITH IN JUNEAU IS SENSED BY BUILDERS; IS SPIRIT OF TIMES

By JOHN RUSTGARD

Not only the permanency, but the steady future growth of Juneau, is assured. Intelligence and perseverance are making the well nigh inexhaustible ore bodies at our feet yield dividends to the investor; in our front yards we shall soon have the foaming cataracts, which through conns have been selfishly expending their immense energies in drumming to

insist on surrounding themselves with more comfort and more beauty, and more of all those manifestations, or at least symbols, of refinement and culture for which the soul of intelligent beings yearns.

The wide-spread building boom which we have witnessed has not been due to lack of housing facilities. Perfectly good residences and apartment houses have been torn down merely because better ones

JOHN RUSTGARD  
One of the owners, with N. G. Nelson, of the Triangle Building

themselves their dreary monotones, will soon be put to work grinding out forests into pulp and in converting the pulp into paper and many other commodities, while in our back yard we shall soon have one of the largest and most populous mining fields of the continent.

The erection of the Triangle Building, however, was not prompted by any prognostication of future events but by contemplation of present needs.

The tremendous activity of the United States during the last decade has not been so much the result of an expanding population as the response to a constantly increasing demand for better living conditions. People are no longer satisfied to merely get along—they

(Continued on Page Four)

### GREAT FAITH IS SHOWN IN NEW BUILDING

Juneau Lumber Mills Gratified at Supplying Much of Material

By ROY RUTHERFORD  
President, Juneau Lumber Mills

The Triangle Building, Juneau's newest structure, is a building to which the community may well point with civic pride. The Juneau Lumber Mills, which supplied many of the materials that went into its construction, congratulates its owners, Messrs. John Rustgard and N. G. Nelson on their enterprise and Mr. J. B. Warrack, builder, on the magnificent structure he has erected.

In the construction of this magnificent fireproof building, one of the most modern in the north, the owners have demonstrated in no small way their great faith in the future of this community. And they have done it in a manner that reflects very largely to the credit of the City.

### INSURANCE FRATERNITY HAS WORD TO SAY ON TRIANGLE BUILDING

It is a cause for gratification on the part of the insurance fraternity that Messrs. Nelson and Rustgard have displayed the material evidence of their confidence in the future growth and prosperity of Juneau which is represented by the fine, new Triangle Building.

The construction of such a building is of particular value in the matter of the saving of fire insurance premiums, not only to the occupants of the building but to the town in general in the ultimate reduction in rates which will result as buildings of this class replace the old wooden buildings.

May we have more of them.

—ALLEN SHATTUCK.

The Juneau Lumber Mills is gratified to have had a part in the building. This company has fulfilled its function in the community by supplying an up-to-the-minute lumber service to the contractor. Approximately 100,000 board feet

# PRIZE WINNERS IN TRIANGLE BUILDING CONTEST ANNOUNCED

Gordon Ingman was awarded first prize by the judges for the best article describing the Triangle Building in the contest, conducted under the auspices of the owners of the building and the contracting company which built it. He will receive \$15.

Mary Giovanetti was awarded the second prize, and will receive \$7.50. Jean Faulkner was awarded third prize, and will receive \$2.50.

The judges named for honorable mention on account of the excellence of their articles: Joseph McLean, Mabel Blanche Ritter, Leonard Forrest, Lucille Norton, Barbara Simpkins, Mary Vander Leest. There was no attempt to set down the names of the writers of the honorable mention articles in the order of merit. They are given in the order in which the articles were numbered when received.

There were eighteen contestants, and the judges eliminated half of them, some of them solely on account of the fact that they exceeded the 250-word limit made by the donors of the prizes. The decisions between some of those accepted and some of those rejected were very close, as all of the articles were creditable to the participants and to the schools they represented.

All of the decisions for prizes were close, and the judges frankly admit that other judges might with good reason have made other decisions. The articles were generally speaking of high merit, and demonstrate that the youth of Juneau agrees with those of maturity that the Triangle Building is in every way a very valuable asset to this city and places its residents under large obligations to N. G. Nelson, John Rustgard and the Warrack Construction Company.

The judges did not know the name of a single contestant until after they had rendered their decisions. They made their awards according to the numbers on the articles. The names of the writers remained sealed in envelopes bearing numbers corresponding to the articles.

The judges were Willis E. Nowell, E. J. White and John W. Troy. The winning articles, first, second and third prize, in rotation are given below:

## THE TRIANGLE BUILDING

The Triangle Building, owned by Gunnar Nelson and John Rustgard, and built by the Warrack Construction Company of Seattle, is now practically completed. It is located at the corner of Front and Franklin Streets, the heart of the business district of our Capital City, occupying a place which certainly meets with the demand of an up-to-date business house. It is with pride and satisfaction that the citizens of Juneau point to this imposing structure, the very beauty of which lies in its dignity and simplicity of design and solidity of construction.

It is a reinforced concrete, fire-proof building, three stories high. The first floor is conveniently designed for merchants. The second story consists of office rooms; while the third is made up of apartments, beautifully finished, comfortable and commanding a wonderful view of the Channel.

Sufficient light is provided for the fixtures being the best, and throughout, the building is efficiently heated by a central heating plant.

That the owners of this building have faith in our city is shown by their investment, and they are setting a worthy example for further development. Our entire community has profited by what they have done. Civil improvements of this kind, will make the resident proud of his home town, and the tourist and traveler will leave, duly impressed, and convinced that Juneau is growing bigger and better, gradually developing from the frontier town of early days to a modern progressive city.

## THE TRIANGLE BUILDING

By MARY GIOVANETTI  
This building, situated on the corner of Front and Franklin Street, with its modern architecture is the most outstanding building in Juneau.

It is constructed of steel and concrete which makes it absolutely fireproof.

The first floor is given over entirely to stores, has large display windows and above this extends a large marquee of pale green. At the base of the building is a porcelain tiling in black and white. At the rear of this floor is the boiler room.

As one makes his way up Franklin Street he comes to the side entrance. Above the door is a small steel cornice and above this in bronze lettering is the name "Triangle Building."

On the second floor the hallway is triangular with twelve well-lighted offices. The floors are of concrete and the walls of plaster.

Between the second and third floor is an asbestos and steel door which automatically closes in case of fire.

There are three single and two double apartments on the top floor. The single apartments contain a living room, closet, bathroom, combined kitchen and breakfast room. The double apartments have three bedrooms, living room, dining room, kitchen, bathroom and several large closets.

A modern equipped laundry and delivery closets are for the use of the tenants. Also for each apartment there will be built-in ironing boards, electric ranges and electric refrigeration. There will be one-inch padding beneath the carpets on the stairs and hall.

The fire escape is the only modern one in Alaska.

## THE TRIANGLE BUILDING

By JEAN FAULKNER

The Triangle Building has improved the appearance of Juneau more than any other building which has ever been erected in the town.

When it was erected the building formerly occupying its space was torn down. The old wooden structure jutted out into the street and was a fire menace to the city, while the Triangle Building has been built back from the street and is fireproof.

The Triangle Building, named for its triangular shape, is Juneau's most modern and beautiful office building. It is in an excellent location for business, being in the heart of the city. The color scheme of the outside is green and white. At night the building is lighted by two flood lights, one on either side. The exterior is of a cement mixture called procelina.

Every bit of space inside the building has been utilized. On the first story is room for four stores. On the second story there are twelve offices and on the third, five apartments. There is an iron door leading from the second story to the third, which is an excellent precaution of fires.

The building is steam heated by an oil burner. This burner has three safety appliances and a three hundred gallon tank.

The Triangle building greatly enhances the beauty and helps the prosperity of Juneau, and the citizens of this city owe a debt of gratitude to the donors and Mr. Rustgard, the owners.

# MOBILE ROAD PATROL NOW FORMED, CAL.

SACRAMENTO, Cal., Dec. 2.—The day of speeding across a county line to avoid being presented a traffic ticket is over in California. The formation of a state highway patrol of nearly 500 officers abolishes dual state-county enforcement of motor vehicle laws and centralizes the responsibility. Under the general heading of automobile legislation, penalties for criminally careless, drunken and incompetent drivers were stiffened.

Frank G. Snook is chief of the state division of motor vehicles and will have for his superintendent of the mobile force Eugene Biscailuz, for more than 20 years a deputy sheriff in Los Angeles county.

The patrol, a mobile body able to meet emergencies in any portion of the state, can be assigned to any area where there is an unusual traffic movement. The traffic officers, now able to pursue fleeing autoists from one county to another, are expected to cut down the number of fatalities caused by speeding and reckless driving as well as minimize automobile theft.

Biscailuz points out that his men also will reduce the use of motor cars in other criminal activities. If a crime is committed a large force of the patrolmen can be sent to the vicinity to guard all highways. Automobile associations see another benefit in a state motor patrol. Traffic enforcement will become uniform and enforcement for revenue, instead of protection of life and property, can be nullified. There have been instances, the California Automobile Association cites, where officers, informed that city or county treasuries were low in funds, rounded up motorists to reduce the deficit.

## American Woman Author Paid Tribute to Japan

GENEVA, Switzerland, Dec. 2.—Japan has paid an unusual tribute to an American who portrayed the beauty of the land of the chrysanthemums with her pen.

The ashes of Eliza R. Scidmore, student of Nipponese life and author who died here, will rest in the cemetery of Yokohama.

Under a diplomatic escort offered by the Japanese government, they were taken from Geneva in a special casket to Yokohama. The ashes

# GIRLS THRILL TOROMANCE IN NEW LINE NOW

WASHINGTON, Dec. 2.—There is romance in the task of issuing licenses to the thousands of airplane pilots, mechanics and students of the country.

It might seem a dull routine matter, but it is not, take the word of the girls who issue them in the licensing section of the Department of Commerce. They "feel the heart beats of the game."

"Handling such a large volume of work, it seems strange that we remember so many of the pilots to whom we send licenses," the young woman who supervises the work writes for the Department's Air Commerce Bulletin. "Some of the old timers I would recognize in the hereafter, just from handling their papers and photographs so many times. We know those who think kindly of us and those who take every opportunity to knock."

"Often we have stayed overtime to get out a 'special' to some chap who wrote a nice letter saying that a good job was awaiting receipt of his license."

"It has been lots of fun watching the young boys come in for their student permits and take the steps up through private and limited commercial and finally to transport licenses. To us that is his graduation, and we often wish we could send along a nice note of congratulation."

"Then sometimes we have to take a dirty old rubber stamp and mark across the folder of some fine young man 'deceased.' It is like parting with an old friend."

"Of course, among a gallery of such real Americans each girl has a favorite. My pick of what a young aviator should be lived down in San Antonio. I requested one of our field inspectors to look him up—but alas, he came back with the report that the pictures must have been taken before the war as he was now bald, fat and married."

"Feminine aviators sometimes receive a little extra attention by getting what we call a 'nice number.' Often I hear one of the girls say, 'Gee, my next number is 2500—I wonder if I have a girl in this bunch.' A girl's photograph naturally is always scrutinized, often to determine if she is as young as she says she is. Once a girl took literally our request for a photograph showing head and shoulders, thereby throwing the entire aeronautics branch into hysterics."

"I could tell dozens of real human interest stories—stories alive with the spirit of flight. I could tell stories of the sadness and courage of a mother who lost her boy; the disappointment and determination of a boy who hadn't the funds to continue to fly but expected to take it up again in the spring, and the ridiculous assuredness of the student who wanted to learn to fly by summer so he could make a transcontinental trip. "Sometimes I wonder if the issuing of pilot's licenses will ever become a routine Government job. I think not."

were accompanied by Dr. Kusama, a Japanese delegate to the League of Nations. The bodies of Miss Scidmore's mother and her brother, George H. Scidmore, formerly American consul general at Yokohama, lie in the same cemetery where the author will find a final resting place, among the people she loved.

## HORSE CABS BLOCK TRAFFIC

PARIS, Dec. 2.—Horse-drawn vehicles run afoul of the Paris police more often than do the taxicabs. Four-fifths of the traffic violations are committed by drivers of private cars and trucks.

Old papers for sale at The Empire office.

# LOCAL FIRMS THANKED BY CONTRACTORS; FINE SERVICE GIVEN HERE

Much of the success in bringing to a satisfactory close, a building project such as the erection of the Triangle Building, is due to the excellent service and ability displayed by Juneau firms having a part in the work.

The general contractors are desirous of having it known generally, that, without the cooperation of these firms of Juneau, whose ability and service were given a good test, no such creditable conclusion of operations would have been enjoyed.

**Rice & Ahlers's Job**  
The largest of the sub-contracts was handled in a most satisfactory manner by George B. Rice and John Ahlers, who under the firm name, had the contract for the complete installation of plumbing, heating and sheet metal work.

**Juneau Mills**  
The Juneau Lumber Mills were called on for quantity, quality and all sizes of lumber without at any time being "stumped." They furnished all of the lumber in quick time as required.

**Morris Company**  
The sand and gravel problem, ever a hard one for Juneau, was solved by Mr. Morris of the Morris Construction Company. Gravel was brought in by trucks over ten miles of haul one way, during all kinds of weather, and without causing delays.

**Hardware Companies**  
Such stocks as carried by the Juneau Young Hardware Company and the Thomas Hardware Company are a credit to the town and to these firms. No matter what we wanted in the hardware, roofing, miscellaneous supplies or painting material lines, but what could be had from the great stocks carried by these stores.

**Bodding Transfer**  
The hauling of freight and other materials is a job requiring almost day and night attention, and yet O. Bodding of the Bodding Transfer Company could be absolutely depended upon to give the service, and he did.

**Carrington and Jones**  
The firm of Carrington and Jones with head offices in Seattle, is another Alaska firm who supplies valuable service without "fuss." They are manufacturers' agents and back up the local dealers of Juneau and other Alaska towns who are called upon to furnish merchandise or materials of which they are the agents. Their forwarding service is little praised but sometimes disastrous by the use of it.

**Splendid Workmen**  
The many fine, able mechanics and workmen employed from among the residents of Juneau rendered good service and deserve the highest praise for the manner in which they all "stuck" in spite of the almost intolerable weather conditions.

**Peterson Commended**  
The entire project was under the able supervision of P. O. Peterson, Superintendent of the Warrack Construction Company and a good one. He was assisted by Gunder Olson who had been on the job from the start, having had charge of the excavation before the arrival of the Superintendent.

The Warrack Construction Company also does not forget the kindness and consideration of the Mayor and City Council of Juneau and their ever patient Chief of Police.

# ARTICLES ON TRIANGLE BUILDING GET SPECIAL MENTION FROM JUDGES

## THE TRIANGLE BUILDING

Newcomers to Juneau will feel they are in a modern progressive town when they see the new buildings. One of the finest and newest buildings in Alaska is the Triangle Building, just recently completed by J. B. Warrack and Company.

It is soundproof, waterproof and fireproof; has numerous safety devices such as a fire escape, an iron door preventing fire from ascending or descending to the third or second floors, and two new devices on the automatic oil burner. There is electric wiring, and plumbing throughout; a flag-pole at the corner and a marquee facing Front Street. The exterior is finished with a new concrete composition, colored light tan with jade trimmings.

This magnificent building is three stories high. Four stores and the furnace room occupy the first floor. The second floor contains twelve office rooms, reached by ascending only twelve low, broad steps from Franklin Street, an unusual feature. On the third floor there are five beautifully arranged apartments; each having an electric range, electric refrigerator, hardwood floors, except in the bathrooms which have tile and kitchenettes which have linoleum, and French doors between the living rooms and dinettes.

The building is a great asset to our town because it catches the eye of all the tourists and makes their first impression very favorable.

It also makes the town more metropolitan in appearance with the paved streets, new buildings and in particular, this new, modern building.

MARY VANDER LEESE.

## THE TRIANGLE BUILDING

The Triangle Building, Juneau's latest fireproof structure is situated on the corner of Front and Franklin Streets. The building was erected by the J. B. Warrack Construction Company for N. G. Nelson and John Rustgard. It consists of three stories and is a masterpiece of modern architecture and construction. The outside is finished in pearl gray stucco trimmed with pale green.

The first floor gives space for four stores with large plate glass windows and tiled fronts. These rooms are spacious and well lighted. The walls are plaster as are the walls of the rest of the building.

On the second floor are situated twelve offices for the use of enterprising business men. These rooms are also spacious and well lighted.

On the third floor the space is occupied by five, modern, three-room apartments each equipped with the latest improvements.

The building has an ideal location in the center of the business district which is an advantage to the stores and offices. The fireproof structure is an advantage to the apartments because it relieves one of the worry of fire. The building on a whole is very attractive. There is a marquee over the doors and windows of the first floor facing Front Street and the space between the display windows and the sidewalk is done in black and white tile work which is very attractive also. This building is a credit to Juneau and one of which Juneau is justly proud.

LEONARD FORREST.

## THE TRIANGLE BUILDING

This splendid structure is situated on the corner of Front and Franklin Streets. It is one of Juneau's most outstanding buildings and will tend to enlighten the newcomer as to why we are so justifiably proud of our city.

It is well named, being triangular in shape, which fact lends it a distinctive style, artistic and pleasing in appearance. It stands three stories high—simplicity of architecture lending it dignity. It is modern and up-to-date in every detail. It is not elaborately trimmed, just enough to lend it a touch of the artistic. Its pearl-gray perfection is set off by pale green, which renders it an object of quiet beauty. On the left hand side is the fire escape, conveniently and carefully placed.

On entering we find ourselves in spacious rooms, well planned and well lighted. Here is place for attractive roomy stores.

After climbing a flight of stairs we find ourselves in a long corridor with doorways on either side. Its very simplicity gives us a feeling of security. These twelve rooms are model modern offices.

Another flight of stairs brings us to the third story. Here we find five ideal apartments, fitted with every possible convenience—well lighted and well ventilated; affording a cosy nest for some for-

unate persons—safe as well as cosy for the Triangle Building is fireproof throughout.

Juneau is proud of this building not alone because of its solidity and security, but because it speaks of Juneau's faith in Juneau's future.

MABEL BLANCHE RITTER.

## TRIANGLE BUILDING

The new Triangle Building of Juneau, situated on the corner of Front and Franklin Street, derives its name from its unique position. It is constructed of steel and concrete, portraying in every detail the architectural genius of Mr. Warrack.

The building is three stories and is equipped throughout with modern heating, lighting and plumbing systems.

On the first floor are four stores. Heavy plate glass display windows add to their desirability. A pale green marquee, extending across the side facing Front Street, gives a charming effect. The black and white porcelain tiling around the base of the building adds an artistic note.

The entrance to the second and third floors, with its cornice and name "Triangle Building" above in bronze lettering, faces Franklin Street.

Two short flights of stairs brings us to the second floor with its twelve well-lighted offices. Two short hallways lead right and left from the main hall. Between the second and third floors is an automatic fireproof door of asbestos and steel which eliminates any danger of fire.

A hardwood stairway leads to the third floor which contains two double and three single apartments, all finished in cream color with buff and light green woodwork.

Near the door of each apartment is a private delivery closet in which household deliveries may be made without entering the rooms. The fire escape is the first modern one in Alaska.

Cosmopolitan in design and material it stands as a trophy to the citizenship of Juneau.

LUCILLE NORTON.

## THE TRIANGLE BUILDING

"The Triangle", Juneau's new fireproof building, of concrete and steel is situated on the corner of Front and Franklin Streets.

On the side facing Front Street is a long green marquee and a small copper marquee ornaments the side entrance.

The outside of the building below the show windows is decorated with black and white porcelain tiling.

The first floor has four departments arranged for stores. They are very well lighted by plate glass windows.

The twelve offices on the second floor are also well lighted and roomy.

The floors are concrete and the walls are white plastered. The halls are T-shaped. A splendid feature about this floor is a fireproof door, made of asbestos and steel, which in case of fire prevents the flames from passing to the third floor.

The third floor contains five very attractive apartments. Each apartment consists of a large living room, bedroom, kitchen, bathroom and clothes-closet, is furnished with all the modern conveniences, including an electric range and electrical refrigeration.

The combination kitchen is separated from the living room by French doors.

The lighting fixtures are modern and beautiful. The floors are of hard wood.

There is also a large laundry for the use of the tenants. Each apartment has a cupboard for delivery men to put the parcels so they won't have to go in the apartments.

Down at the further end of the hall is a large fire escape. The building is heated by steam.

BARBARA SIMPKINS.

## THE TRIANGLE BUILDING

The Triangle Building is situated on the corner of Front and Franklin Streets and is about the best and most up-to-date building in Juneau.

It was constructed by the Warrack Construction Company and is entirely fireproof throughout.

It has four large rooms for stores on the first story. They are large, light and airy. The possibility of making them into beautiful and attractive stores is already shown by the Halvorsen's Ladies Clothing Store, which equals any store in our large cities and seems to add to Juneau touch of the "outside."

On the second story there are offices, twelve in number, the offices are bright and airy and would make the business man feel more like business.

On the third story there are

apartments, five in number. In each kitchen there is an electric refrigerator and an electric range over and above the regular kitchen furniture. All these apartments command a splendid view of the business section of the city.

The windows are large so that a person can have daylight and fresh air.

The electric light fixtures are of the most modern design and are very attractive.

The frame of the building being made of steel and cement and finished in stucco is absolutely fireproof. A door made of asbestos and steel operates automatically in case of fire, preventing flames from passing from the second to the third floor.

A fire escape of the most modern type looks after the rest.

A marquee the entire length of the building on Front Street shelters passers by and protects the large plate glass show windows.

This building is almost the best building in Alaska and Juneau may justly be proud of it and so may all Alaska.

JOSEPH F. McLEAN.

## TRIANGLE BUILDING

The Triangle Building is Juneau's newest concrete, fireproof structure. It is three stories high and is divided into stores, offices and apartments. There are three modern stores facing south on Front Street, and one store facing east on Franklin Street.

The second and third stories each have ten windows. A marquee extends along the south of the building, ending just around the corner on the east side. The furnace room is located in the back of the southeast store.

The entrance is on the upper east side on Franklin Street. There is a small copper marquee above the doorway; above that is a sign "Triangle Building." The stairs leading to the second floor are concrete; in the middle there is a door leading into the store. On this floor are twelve offices.

The stairs leading up to the third story have two turns in them; on this floor are five large, room apartments, with a room containing four stationary tubs.

The hallways of the second floor run south from the stairs, it branches off into the east and west with offices on each side. On the third floor the hallway runs south; it turns to the east and west. In the apartments there is another hallway like it. At the head of the stairs there is a short hall leading north to Apartment One.

There is a skylight in the northwest portion of the roof. The flag-pole is on the southeast corner. The chimney is on the northwest a few feet away from the skylight. The fire escape is on the east side. The building is painted grey and the trimmings green.

This new building helps Juneau's progress by replacing the old and unsightly buildings formerly on the site; furnishing more modern stores, offices and apartments.

LINCOLN TURNER.

## TRIANGLE BUILDING

We, the school children of Juneau, are swollen with pride of our city as we view it from the windows of our new school buildings and mark the many other new buildings that have been erected within the last few years.

But most of all do we take pride in our newest, the Triangle Building, which stands at the intersection of the main streets of Juneau. It greets the stranger from all the ships, and one cannot look on this large concrete building with its beautiful tile front without feeling Juneau a real Capital City.

Not alone are we glad for the impression on the stranger, but for ourselves; for one year ago we were less than one year ago we hurried to shut from our vision the ugly, sordid shacks, we now linger to admire.

CECELIA LARSEN.

## TRIANGLE BUILDING

The Triangle Building is one of the newest buildings in Alaska. It was started last June and is now under completion.

It is located at Front and Franklin Streets. It is four stories high and of triangular structure. The building was built by the Warrack Construction Company. The frame part of it is of cement and is fireproof. The color on the outside is white trimmed with green. There is room for four stores, twelve offices and five apartments. The apartments are of the most modern design. They are fitted with electric ranges, refrigerators and other modern conveniences. At the end of the hall there is a laundry for the people living in the apartments. There are six wash days a week.

The offices are of modern design and very convenient. The stores are modern in every way and have large show windows.

BEN MULLEN.

## TRIANGLE BUILDING

Submitted in Contest

The Triangle Building is one of the newest and most up-to-date concrete buildings constructed in Juneau. It was constructed by Mr. Warrack and Company. The building is located in the heart of the city. It is owned by N. G. Nelson and Company.

The ground floor is devoted to mercantile purposes. A modern furnace is installed in the back part of the ground floor, furnishing heat for the entire building.

The second floor is devoted to various offices.

The third floor is made into five up-to-date apartments. Each apartment is equipped with electric refrigeration. All the apartments have their own private hallway. On this floor there is a large wash-room containing a modern electric washing machine, and a sanitary wash tub for the accommodation of all the tenants.

The fire escape is provided for all the tenants of the building.

This building has added so much to the wealth and appearance of the city.

It is admired by all who have seen it.

XENIA PAUL.

## TRIANGLE BUILDING

Submitted in Contest

The Triangle Building is one of Juneau's largest buildings. It is triangle in shape and has three stories. Only one is occupied now. That is used as a ladies' clothing department.

The outside for about a foot up is painted black with white lines to represent bricks. The upper part is plastered white with green trimmings, the porch roof is painted green. The walk around it is cement.

Standing on the side of the Triangle Building facing the Sanitary Market, the north is facing the Coliseum Theatre, the east side is facing the Gastineau Hotel and cafe and the west side is facing the First National Bank and the south side is facing Sanitary Market.

The Triangle is going to bring progress to Juneau.

ELEANOR GRUBER.

## WARRACK BUILDS FOR ALASKANS IN MANY LOCALITIES

Construction Company Has Long String of Creditable Buildings

(Continued from Page One)

In 1923, the Federal building of Cordova was started and this was the first reinforced concrete Government structure of its kind ever built in the Territory.

The contract for the erection of the high school in Ketchikan was awarded to the Company in 1924. This was by far the largest school contract ever awarded in Alaska. The same year the fireproof Ingersoll Hotel building at Ketchikan was started. This \$230,000 project was completely financed and built by the Company.

Then followed the erection of the building for the Citizens' Light, Power & Water Co., at Ketchikan, which houses the general offices and salesrooms of the light company there; completed in 1925.

**Orphanage Built**

An interesting piece of construction work was the building of the Orphanage on Wood Island, near Kodiak, for the Women's Home Mission Society of the Baptist Church. This was completed in the fall of 1926.

Alaska's finest apartment house was built in 1927. This was another Warrack project in its entirety, having been promoted, financed, planned and built by the Company in the City of Ketchikan.

Due to the rapid growth of Ketchikan, another school building was found necessary, and this Company was the successful bidder in the letting by the city; also in 1927. This school, known as the White Cliff school, was built in the newer section of the town, near Charcoal Point.

**Seward Flood Control**

The Seward Flood Control project was carried through to completion in the fall and winter of 1928, for the War Department, under contract. This was a difficult piece of construction and the company faced many hazards due to flood conditions and later the ice, snow and storms of winter.

This year saw the completion of the dock, and steel warehouse for the Northland Transportation Co., at Ketchikan, (a Foshy company) built complete in 30 working days.

**Sage Memorial**

The beautiful Sage Memorial Building at Sitka for the Sheldon Jackson School.

Last, but not least, the Triangle Building at Juneau, the Triangle Building at Juneau.

The Warrack Construction Co. has plans for other buildings in the various cities of Alaska, the construction of which will probably be undertaken in the Spring.

One department is practically continually at work turning out preliminary plans and estimates free of charge for the Alaska people.

Preliminary studies have been submitted to the City of Anchorage for their new school; sketches have been sent to the Jesse Lee Home at Seward for a new building; plans have been prepared for an addition to the Van Gilder Hotel in Seward, and two other projects in Southeast Alaska, the details of which will be published later.

**Triangle Building Is Monument to Growth, Alaska, Capital City**

(Continued from Page One)

offices, modern in every way as to light, heat, ventilation and fire-proofness, as well as toilet facilities; sanitary and clean looking with white tile floors.

**Apartment Tote**

The third floor contains five large apartments of unusually clever layout and convenience. These have oak floors throughout, even in bedrooms and closets, mahogany entrance doors, substantial hardware and fixtures, everything possible in built-in features including kitchen cabinets, pot and pan closets, china closets, ironing boards and medicine chests.

The bathrooms are complete in every detail and have built-in tubs and white tile floors.

**Privacy Maintained**

Each apartment is separated from the other by hallways or a double insulated wall. Electrical outlets for floor lamps, reading lamps, electric irons, mechanical refrigeration and radio, are a part of the electrical installation in each.

For the use of the tenants a large laundry and drying room has been provided and is equipped with four tubs, an electric washing machine and clothes drying rack.

The halls are quiet, with carpet runners and thick padding, and the kitchens have an inlaid linoleum cemented over felt on the floors.

The heating system and plumbing installation are highly satisfactory; the tests put to them have shown balance in heating, circulation without noise in the hot and cold water supply and also perfect drainage and ventilation from all plumbing fixtures.

A 20-year roof was applied and

## PLUMBING AND HEATING BEST UPON MARKET

Rice & Ahlers Company Perfect Triangle Building with Latest System

(Continued from Page One)

"stake" to invest in Alaska, and by helping Alaska, help themselves.

The Warrack Construction Company was the general contractor and Mr. J. B. Warrack of this firm was in direct charge and he set an example for every sub-contractor and every working man on the job. His every effort seemed not only to live up to the specifications, but to give more than they called for, to give those thousand and one little things that can never be written in the specifications. It is an honest building, honestly built and if any mistakes were made they were honest mistakes.

**Over-Head System**

The heating plan is what is known as the Over-Head System, and every radiator in the building heats on less than one pound of boiler pressure, and in addition, the Nelson Building across the street is heated from the same boiler.

The boiler is a Birchfield, manufactured by the Birchfield Boiler Co., of Tacoma, and sold through Rice & Ahlers Co., sole distributors for Southeast Alaska. These boilers are of the finest built in the United States today and in their efficiency compare favorably with the Scotch Marine and in actual test have shown a saving of 48 per cent over the old-style cast iron boilers.

**Automatic Oil Burner**

Installed in this boiler is a Dee 3, Hart full automatic oil burner. This is equipped with automatic controls that shut the burner down when the temperature of the building reaches 72° and turns the burner on when the temperature drops to 68°. The thermostat controlling the temperature of the building is located in Miss Halvorsen's store. On the boiler front is an automatic switch that shuts the burner down, if the fire goes out or does not light, and on the water column is located the low-water cutout that shuts the burner down should the water get low, so there is no danger of burning out boiler tubes. In addition to this regular safety valve is an automatic control that shuts the burner down when the steam pressure reaches a certain point, never allowing the pressure to exceed two pounds.

The condensation from the radiation is carried back to a Trane condensation pump which automatically returns it to the boiler.

**Hot Water Supply**

The hot water supply for the building is furnished from a 250-gallon steel storage tank, containing coils through which the steam passes assuring an adequate supply of hot water at all times.

**Plumbing**

The plumbing in this building required considerable planning and thought, as the thin sound proof walls are filled with a blanket of sea-weed which left little room for piping but through the co-operation of the owners and the general contractor, we were able to conceal practically every pipe, but at the same time, make them accessible for cleaning out.

The plumbing fixtures in the building are Crane and Standard make and the best of their kind. The sinks are a special flat rim with a solid back especially designed for built-in drain boards and each and every sink is equipped with a swing spout faucet on which is mounted a white soap dish.

The domestic hot water supply, which is taken from a large tank in the basement is a circulating system, so that when the faucets on the kitchen sinks are opened, you can get hot water "right now."

**Bath Rooms Complete**

The bath rooms are complete in their appointments, built-in tubs, medicine cabinets and tile floors. The laundry is equipped with two stationary tubs set back to back with swing spout faucets, which makes it possible for at least two tenants to be using the laundry at the same time.

The sheet metal work throughout the building was installed by Rice & Ahlers Co., under the direct supervision of W. C. Jensen. Armco iron was used throughout and while the cost of Armco was slightly more than that of ordinary cast iron, it will last many many times longer. Armco is a copper bearing iron and resists rust and corrosion far beyond that of any ordinary zinc coated iron.

We point with pride to our part in the erection of this fine building.

will stand impervious to the most severe attacks of weather.

Everything has been done by the owners, within reason, to provide for comfort to their tenants and this building compares favorably with any of its kind in the States as to appointments and construction.

**Our printing draws attention. Give us a chance to prove it**

## FAITH IN JUNEAU IS SENSED BY BUILDERS; IS SPIRIT OF TIMES

(Continued from Page One)

Those who overlook such tendencies of human nature are at a disadvantage in the general bid for business. This accounts for how so many of the younger generation, endowed with the spirit of the times, step into a field, whether of a profession or of merchandising, and capture the prize from the veteran.

They surround themselves and their patrons with that aroma of opulence, luxury and refinement which quietly attract all intelligent beings even as does attar the bee, and which by the very contrast make the old fashioned establishments repellent.

Entirely apart from the inevitable growth of the city, there is a natural demand in Juneau for better and more beautiful stores, offices and apartments. It is in that faith the Triangle Building has been erected.

**TRIANGLE BUILDING Submitted in Contest**

Juneau's newest and most modern building has been finished recently by the Warrack Construction Company of Seattle, at an approximate cost of sixty thousand dollars.

The construction of this building marks the advancement of Juneau's civic and commercial development, as it now occupies the site of an old shack which was a fire menace to the city.

The new building is situated in the very heart of the business section of this city at the intersection of Franklin and Front Streets.

The Triangle Building is of reinforced concrete, fireproof construction, triangular in shape, three stories high, and has a footage of 131 feet on Franklin and 88 feet on Front Street. It is steam heated throughout by an automatic oil burner.

On the lower floor three large rooms are provided for merchants. The second floor consists of twelve office rooms and on the third floor six modern apartments are situated.

The two upper stories command an excellent view of Gastineau Channel and the city.

The fine location of the building is a great asset to the merchants established here because of the fine advertising opportunities afforded. This is also aided by large plate glass display windows and the convenience to customers.

The simplicity of its design lends beauty to the structure and is so constructed that every square foot of room is conveniently utilized.

Newcomers can no longer say that Juneau is a city of old buildings, as more buildings will be built to replace the old ones in the near future, for through this structure the civic pride of Juneau's citizens will be aroused and will result in extensive development of the business district.

**LORENE SMITH.**

**TRIANGLE BUILDING Submitted in Contest**

The N. G. Nelson Triangle Building is the best situated building in Juneau, being in the center of the main street and on a corner facing another popular thoroughfare.

It is a modern, fireproof concrete building of attractive architecture.

Facing two streets and being all the advantages of all the day-largely plate glass front it has light there is.

The heating and plumbing are the most modern and sanitary. One may enter the upper floor entrance on the sloping street which makes very few steps to climb.

Because it is concrete, glass and tile on the outside the whole building may be washed with a hose.

The people who are lucky enough to have stores and offices in this building will enjoy every convenience.

## HALVORSEN'S IS MODERN STORE

Women's Specialty Shop in Triangle Building Is Most Attractive

Halvorsen's, "Juneau's Own Store," is located in the Triangle Building. Its store-room is 27 by 80 feet and has a full glass front, and is lighted with a profusion of frosted drop lights.

Upon entering the shop, one is at once impressed with its quiet dignity. One's feet sink into a soft carpet of rose and taupe tones blended together, making the atmosphere both homey and charming.

To the left the visitor's eyes are attracted by the built-in cabinets for the ready-to-wear merchandise. The paneling is of futuristic design with a drift wood finish, set off by walnut trim. The mirrors are grouped in threes to allow m-lady thoroughly to appreciate the graceful lines of her new coat or dress.

At the end of the cabinets are two spacious fitting rooms, well lighted and equipped with large mirrors. To the right of the shop one finds shelving the full length of the room with display cases in front of them, tastefully trimmed with silk lingerie and accessories.

Three colorful stand lamps also add charm to the floor plan, as do two large, growing ferns on attractive pedestals. Without a doubt it justly lays claim to being one of the most attractive specialty shops in the entire Territory.

**TRIANGLE BUILDING Submitted in Contest**

The Triangle Building is situated on the corner of Front and Franklin, it is one of Juneau's best buildings. It was built by the Warrack Construction Company and is entirely fireproof. It is built triangle in shape and is three stories high. On the first floor there are four stores each having a very large display window. One of these stores is already occupied by Halvorsen's. On the next floor there are twelve offices each having plenty of windows and a radiator, on the top floor there are five apartments, each having three rooms. In each kitchen there is an electric refrigerator and an electric stove. At the end of the hall there is a washroom equipped with an electric washing machine.

## When the Plans Are Still on the Board

—that is the time you can save money!

A Stock Fire Insurance Company representative recently recommended to the architect who was drawing plans for a \$200,000 office building that \$3,500 be spent to make the building more fire-resistant. The advice was accepted, and the owner now pays \$1,461 per year LESS for his insurance than he would have paid if the original plan had been carried out.

On any building project we can put property owners in touch with this money-saving service, at the same time greatly reducing the danger of fire.

This is only one of many services your stock fire insurance agent offers. Let him serve you.

### SMITH SHAPING CAMPAIGN PLANS SEEKING ADVICE

GOVERNOR HAD PLANNED A CONFERENCE TODAY WITH SENATOR ROBINSON

ALBANY, July 9. (AP)—Governor Smith is shaping his campaign plans and in consultation with others. Although he will have final say, both as to organization and strategy, he is indicating he has no preconceived idea as to what will be done by seeking the advice of various party leaders.

The Governor had planned a conference with Senator Robinson today.

### LARGE ESTATE STARTS IN GLEAM THROUGH SUICIDE

SECRET MARRIAGE REVEALED WHEN HUSBAND APPEARS ON THE SCENE

SEATTLE, July 10. (AP)—With a \$50,000 estate at stake, the secret marriage of Mrs. Mabel Seaborg, who leaped eight stories to her death from a fashionable apartment on June 29, was revealed.

National City Bank officials opened her safety deposit box and found a certificate showing she married Samuel H. Jordan, Honolulu chiropractor, in the Fiji Islands last March.

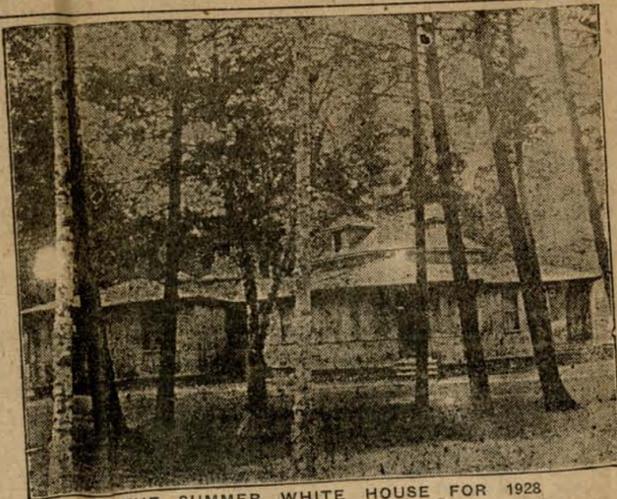

Jordan appeared last Saturday claiming the estate declaring they came to Seattle keeping the marriage secret from Mrs. Seaborg's relatives. Mrs. Seaborg was the widow of Ernest Seaborg, State Fisheries Supervisor, whose body was found after a strange disappearance from Olympia on January 1928. Neither deaths were explained.

### ESTABLISH DEMOCRAT BUREAU IN THE SOUTH

NEW YORK, July 10. (AP)—Establishment of a Democratic Campaign Bureau in some Southern State to offset the "organized efforts of several States to defeat the National Democratic ticket" is advocated by Senator Robinson.

### LOTS OF FIRES

SAN FRANCISCO, July 10. (AP)—After more than 60 alarms for small fires had been sounded, one brought in a three alarm call at 9:30 and caused damage estimated at \$25,000.

THE SUMMER WHITE HOUSE FOR 1928

BRULE, Wis.—A view of the picturesque Cedar Island, lodge, about 40 miles east of Duluth, Wis., where President Coolidge is spending his vacation this summer amid the picturesque and beautiful surroundings of the home of the late Henry Clay Pierce.

**MR. AND MRS. COLWELL HAVE ENJOYABLE TRIP**

Mr. and Mrs. George Colwell, who returned home last evening from the Westward, were visitors in Kodiak about 12 hours while the Admiral Watson discharged cargo, and that evening graced the dancing pavillion by their presence. George always did and always will bring good cheer to any community he visits and Kodiak citizens would like to have him make up his mind to make Kodiak his permanent residence. However, if they can't have George now, perhaps, they say, they will when the big cold storage plant comes.

The U. S. Surveyor, Capt. R. R. Lukens, in port over the week-end left port yesterday for Prince William Sound ports to continue surveying of coastal waters.

**NO ROOM IS LEFT IN THE PIONEERS HOME**

John Johnson, 85, suffering with a large tumor on his neck, is being sent to the government hospital at Anchorage. He is a Territorial Pensioner and has applied for admission to the Pioneers Home but Governor Parks advised Commissioner Stowe at Kodiak that there is no vacancy there. He arrived in Seward yesterday on the Admiral Watson.

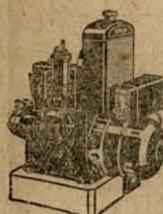

**LUMBER IS ORDERED**  
 The Seward Lumber Co. has ordered lumber from the Seward Lumber Co. which company will shortly begin work shortly on the local Lowell Creek project. The order is estimated at \$60,000 feet.

Inspired by the need of action to prevent continued slaughter of fur-bearing animals an association is being formed in Anchorage to cooperate with the Game Commission.

Pure Bred Stock Produces all of Seward Dairy Milk

That rich, creamy taste of milk is due to the fact that nothing but pure bred, tested cows produce it under the most ideal conditions of feeding and sanitation.

Seward Dairy

CRUISER IS MODEL

One of the most complete pleasure vessels ever to be constructed by a Seattle builder is the Principia for L. A. Macomber, Los Angeles capitalist. The owner plans to cruise to Alaska this summer.

The Livengood camp, steady producer since its founding, is likely to have another big season this year, says a Fairbanks report. Big clean-ups are reported.

George A. Hunter, Fairbanks citizen, died last Wednesday. He was an Oldtimer of the Interior town.

Andrew Holk, 72, Cleary Creek operator for 25 years, passed away in Fairbanks last week.

MEMBER WHALER MORAN CREW KILLED WHEN BOMB ON GUN EXPLODED

At 1:20 p. m. on the 6th of July, Andrew Misfjord of Hoquiam, Wn., a sailor on the whaling steamer Moran, of the American Pacific Whaling fleet, was almost instantly killed by the explosion of a bomb.

A whale had just been killed. Misfjord was reloading and in screwing the bomb on to the end of the torpedo it exploded, shattering his left leg and burning a large hole in his abdominal cavity from which the intestines were protruding when brought to Kodiak.

Commissioner Stowe caused a coroner's jury to be summoned which returned a verdict to the above effect. Deceased was 24 years of age and was popular with all the members of the crew.

Harold Sogr, Anchorage youth and a graduate of the University of Washington, has joined the staff of the railroad hospital.

Fairbanks had three motorboat races on the Fourth of July.

The body of an unidentified man was found last week in a cabin on Thanksgiving Creek, about 40 miles above Circle.

John Leslie Taves was given permission at the Anchorage court term to change his name to John West.

TRAINING CAMP NEWS

The Gateway has wired the Associated Press for special news files on the coming heavyweight championship battle on July 26, between Gene Tunney and Tom Heeney, contender for Tunney's crown, from Australia.

W. R. Macpherson returned from Anchorage last night where he held Evangelical services.

A country without mines is a country with its very people sunk in degradation and poverty; and poverty makes cowards of nations as well as individuals.

**ALASKAN TOURISTS BEING FAKED ?**

Certain traveling salesmen seem to be going out of their way to inform tourists that the majority of attractions viewed in Alaska is the bunk. At least this is the message today. If "Knights of the grip" are doing this Alaskans should give them a boost along; with the toe of their boot.

What possible fakes could Alaskans fool visitors with when Alaska has so much to show the visitor. Barnum may have been right but those tactics are not needed in the Territory. Why try to damper the ardor of a tourist who has spent hard cash to see our domain? And why should salesmen endeavor to kill the goose which lays the golden eggs?

She's a funny world!

Mining is an industry as necessary to the welfare of the community as the raising of crops.

**SMITH GOING OUT ?**

Very secretive and mysterious they come around and whisper, "Sh, Sh" Smith has been called to Washington; he leaves Sunday. Alright ! But why all the whispering ? If General Manager Noel Smith is going out Sunday, O K M & X. As far as we know this is still supposed to be a free country (many will differ with this) and all have a perfect right (perhaps) to talk out loud.

Mining has made the United States the richest country in the world.

One certainty about the brain contests now coming into vogue is that they will not interfere greatly with the beauty competitions.

Political writers have almost completed Hoover's Cabinet, which will save that busy man a lot of time if he is elected.

**SOUTHBOUND PASSENGER LIST ADMIRAL WATSON**

Incoming and Southbound passengers on the Admiral Watson, which arrived yesterday from the Westward departing last evening for the South, included the following:

### RAILROAD EXCURSION TO LAWING TOMORROW

From the appearance of things today Seward will be evacuated tomorrow—a deserted village, so to speak due to the fact the excursion to Lawing is the big attraction for the day. Everyone seems to be making preparations to join the annual picnic to Lake Kenai the most beautiful lake in Alaska, and on which unruffled shores nestles the finest lodge in the Territory.

The train leaves the depot at 9 o'clock and returns in the evening at 7 o'clock.

#### GREASE GUN LOST

Anyone picking up a grease gun on the Seward-Kenai Lake highway will confer a great favor by notifying Charlie Lechner, Seward Machine Shop. This will be greatly appreciated.

Mrs. George Schmitt entered upon her new duties yesterday as clerk and accountant in the J. L. Graef hardware store.

#### SPECIAL NOTICE

Please notice the change in the place of the Evangelistic Service. Formerly held in the Liberty theatre, now held in the Episcopal church.

W. R. MACPHERSON

#### NOW SHE STARTS

The big brick chimney is going up. Row and timbers are going in for the first floor of the new annex of the Seward Machine Shop and it won't be long now, states Charlie Lechner, proprietor, before Contractor Gerhard Johnson will have the whole works completed, probably by the middle of next month.

The wooden struts at the end of the tunnel where the slide came down last week, were broken down, according to arrivals over the railroad since it occurred.

The special rate for carrying automobiles over the railroad and steamship lines to those desiring to tour the Richardson highway, will probably be taken advantage of by a few Seward citizens, this summer.

Andy Simons and Hank Lucas checked out yesterday for the lower lake.

### INDIANS ANTICIPATE RICH TOURIST HARVARD

GLACIER PARK, Mont. July 10. (AP)—Indians who ceded this region to Uncle Sam are wearing broad grins. They expect to get their money back from tourists during the vacation season.

Superintendent Eakin of Glacier National Park predicts that 50,000 travelers will pass through the park within the next three months and the Indians are counting on a heavy trade in souvenirs.

#### WINS HIS SUIT

CAMBRIDGE, July 10. (AP)—When Ethel Goldstein's kid brother found that she had appropriated his bathing suit he rallied his gang and went to the beach after it. She was being dragged from the water when a policeman appeared. He ruled in a Solomon-like decision that Ethel having had her swim, she must return the suit at once.

## The American Marine Finance Corporation

THE necessities of modern business and industry have brought the finance companies into a new position of importance. These are days of rapid expansion and quick turnover of capital requiring financial accommodations which, while perfectly sound, are not within the scope of approved banking practice.

IT is in such countries as the Pacific Northwest and Alaska that the aid of the finance corporation is most needed. The tremendous undeveloped resources—the wealth of opportunity for new and profitable ventures and the shortage of surplus capital which always characterizes a district in the development stage combine to create a condition demanding just such service as the finance corporation is prepared to render.

We are pleased to announce that we are prepared to extend our service to Alaska and expect to play an important part in the development of the rapidly growing commerce and industry of this great Territory.

WE are opening a branch office in Ketchikan and will be pleased to handle inquiries there, or from our general offices in Seattle.

## "TAXI DANCER" AT THE LIBERTY TONIGHT AN EXCELLENT CAST

In telling a story of theatrical life it is absolutely necessary that the director and scenarist adhere to realism, not only for the sake of the picture itself, but for that of the millions of young men and women who view the picture.

This is the statement of Harry Millarde, who directed "The Taxi Dancer" for Metro-Goldwyn-Meyer, at the Liberty theatre this evening with Joan Crawford in the title role.

The story tells of a young Southern girl, who, overcome by her desire to win fame as a dancer, leaves her sheltered home and goes to New York. There her pilgrimage from one manager to another is shown, her consequent fleeting success and failure is vividly portrayed in a way that would not induce any stage-struck girl to leave home.

"We have a great responsibility in making a picture of this kind," says Millarde. "If we paint the prospect in glowing colors, dozens, even hundreds of girls might be influenced to leave their homes for a future that in 99 cases out of 100 means failure, or what is often worse, just a taste of success."

"The Taxi Dancer" is one of the important pictures of M.G.M.'s 1928 releasing schedule, and the cast includes Owen Moore, Marc MacDermott, Clair MacDowell, Douglas Gilmore, William Orlamond, Rockcliffe Fellows, Gertrude Astor and others.

### COPPER PROSPECT GOOD

Charles Ellwood, John Grosh and J. H. Miles, arrived at Valdez last week from the Port Wells district where they have been prospecting a large copper property. It gives promise of being a big producer and an engineer from Santa Monica, Calif. will make an examination of it.

Caught beneath a quarter ton of rock when a wall in his quartz mine on Fairbanks Creek caved in, L. J. McCarthy, in the Fairbanks hospital, is not believed to have been seriously injured.

### LEGAL

**NOTICE FINAL PROOF**  
 U. S. LAND OFFICE, ANCHORAGE, ALASKA.

NOTICE IS HEREBY GIVEN That Leopold Ohnhausner, entryman, Lawing, Alaska, and his witnesses, Frank Straubinger, Lawing, Alaska, and Howard L. Long, Lakeview, via Seward, Alaska, has made final proof on his homestead entry, serial 06220, for Forest List 8,55, H. E. Survey No. 186, New Series No. 1776, and it is now in the files of the U. S. Land Office, Anchorage, Alaska, and if no protest is filed in the local land office, Anchorage, Alaska, within the period of publication or thirty days thereafter, said final proof will be accepted and final certificates issued.

J. LINDLEY GREEN, Register.  
 Date first publication July 5, 1928.  
 Date last publication Sept. 13, 1928.

### WERE ALMOST SKUNKED

The Izaak Walton from the radio station struck out again last Sunday for Ptarmigan Creek but owing to the fact salmon had not started to run their bag was nothing much to brag about. Sgt. Geyer, Buddy Beudreau, Glancy and Miller were the anglers.

There is little placer mining now being done in the Kantishna district, says the Fairbanks News Miner. Few outfits are working there this summer but those that are look good.

### EXCURSION TO LAWING

\$1.00 round trip for adults; \$.50 for children. Those not wishing to take a lunch can eat at Nellie Lawing's. Time next Wednesday.

CAPTAIN GUTHRIE HAS FINE STORY POPULAR

Another winner from the pen of Capt. Ralph R. Guthrie, head of the Washington, Alaska Military Cable and Telegraph System, appears in the latest Popular Magazine which is now on sale at local newsstands. Captain Guthrie's story in this issue, entitled "Avalanche," is about an Eskimo girl who saves a life in an unheard-of way. When the sweetheart of Nucta, the Eskimo girl, was in strange, remarkable danger, she rose to the occasion spectacularly. It is a complete story and is another one of those "different" plot stories which Captain Guthrie seems to be full of.

EDIT-It won't be long now when his host of Seward friends will be saying: "Cap Guthrie! Sure I used to know him when he lived in our town."

Thomas McGill, who is spending the summer in the Valdez country, is shipping to the Seattle Park Board, four porcupines.

At the Anchorage term of court last week the case of B. A. Kleisinger vs Harvey P. Sullivan, U. S. marshal, a suit to recover certain articles, was dismissed.

## S. S. YUKON RADIO NEWS

VOYAGE 57

JULY 13, 1928.

**COPENHAGEN:**-Captain Alberto Mariano and Fillipo Zappi, pilot and navigator of the ill-fated dirigible Italia, was without food for thirteen days and doomed to an agonizing death when they were rescued by the Russian ice breaker Krassin today in an almost unbelievable epic of rescue. The news was darkened by the death of Dr Malmgren, Meteorologist and leader of the group that set out forty three days ago to bring help to the stranded crew of the Italia.

Dr Malmgren died thirty days ago, but the two starving and exhausted survivors of the rescue party were still standing guard over the body of their doomed leader when they were taken aboard the Krassin.

Setting out from the Nobile group on May fifteenth to bring help to the wrecked members of the crew, the three men endeavored to break through the unknown barrier of the north. Their progress was impeded by an injury to Malmgren's leg, which occurred when the gondola crashed, and he was unable to move further. The heroic scientist begged his companions to march on and save their own lives, leaving him to his inevitable end but they would not go and felt bound by the closest bonds of comradeship in the desolate waste. They ministered to him until the day he died. And then day after day was spent in silent horror. Their food was slowly diminishing until thirteen days ago, when there was nothing left. They had only one hope left; that the skies might bring a rescuing plane. This dream finally was fulfilled when Chucknovsky emerged from the air like a rescuing angel. All night long the ice breaker Krassin plunged through a thick mass of ice floes twenty five miles long, and at five o'clock this morning the captain on the bridge saw a figure on the ice. Two hours later the Krassin drew alongside and one of the men stood waving a tattered flag. The second lay exhausted on the ice. Beside him lay the dead body of Malmgren. As the Krassin turned its bow for further rescue work the two men were bathed and given food and fresh clothing and were sleeping soundly soon afterwards.

**FAIRHAVEN, N. J.:**-It Tom Heeney fails to defeat Gene Tunney on July twenty sixth it won't be because he is not used to ring conditions. Tom starts tonight to get used to the conditions that he will encounter in the New York stadium by daily boxing at night under the glare of powerful lights. Both men expect to be in the pink of condition when they enter the ring.

**SPECULATOR, N. Y.:**-Generous doses of milk are keeping Gene Tunney from training down too fine for the defense of his title against Tom Heeney. Although the champion still has two weeks of work ahead of him he is now in the pink of condition. He weighs one hundred and ninety seven pounds and after hard workouts he is five pounds lighter, the exact weight that he intends to carry when he faces Heeney. Tunney restores the five pounds that he loses in the ring every day by drinking three pints of milk a day.

For a dainty, toothsome luncheon, or any variety of up-to-the-minute novelties for gift souvenirs, don't miss "The Corner Cupboard". This, one of Seattle's smartest little shops, is also a philanthropic project. What you spend there goes to the support of that most deserving institution, the Children's Orthopedic Hospital.

-----  
NOTICE  
-----

BE SURE AND NOT MISS THE MOST PICTURESQUE PIECE OF SCENERY OF THE WHOLE TRIP. THIS IS A SIDE TRIP WHILE THE SHIP IS IN VALDEZ THIS MORNING, AND WILL TAKE YOU IN GOOD COMFORTABLE BIG STUDEBAKER CARS, ALONG THE VALDEZ END OF THE FAMOUS RICHARDSON HIGHWAY, INTO THE KEYSTONE CANYON, ALONG THE LOWE RIVER, THE PRETTIEST PORTION OF THIS HIGHWAY WHICH RUNS AS FAR AS FAIRBANKS. THE TRIP TAKES ABOUT TWO HOURS OR A LITTLE MORE, AND GIVES YOU TIME TO TAKE PICTURES OF THE BRIDAL VEIL FALLS IN THE KEYSTONE CANYON. PASSENGERS ARE CHARGED FIVE DOLLARS EACH FOR THIS DRIVE AND PARTIES WILL BE MADE UP SO THAT THERE WILL BE SIX IN EACH CAR. KINDLY GET YOUR TICKETS AND MAKE YOUR RESERVATIONS BEFORE THE SHIP GETS TO VALDEZ, AS PROBABLY THEY WILL BE STARTING IMMEDIATELY ON OUR ARRIVAL.

THE RESULTS OF THE STRAW BALLOT TAKEN ABOARD THE S. S. YUKON YESTERDAY FOLLOWS: FOR PRESIDENT: HERBERT HOOVER...129. AL SMITH...59.

**NEW YORK:**-Accepting the Chairmanship of the Democratic National Committee, John Rascob of Delaware stressed the right of Smith to work a change in the prohibition laws which would improve conditions. If, as a result of careful study, Smith is able to evolve a plan for the regulation and control of the liquor question in a way that will absolutely prevent the return of the saloon and eliminate bootlegging and the evils of graft corruption and murder and restore temperate life in the country, then all fair minded men must admit that it is his right, if not his duty, Rascob said.

**TOKIO:**-The American aviators, John H. Mears and Charles Collier, arrived here today on their trip around the world. The fliers are confident that they will set a new record of twentyfive days in circling the globe. They will board a steamer for Vancouver tomorrow, from whence they will fly to New York.

**SEATTLE:**-The cannery steamer Hyades of the Red Salmon Company struck an uncharted rock in Bristol Bay. The ship is badly damaged.

**SONNEBURG, GERMANY:**-Sixty-five political prisoners have started a hunger strike, fearing the Reichstag may again postpone its decision to vote an amnesty bill.

**VIENNA:**-Good relations between Austria and Italy, which were re-established only recently, today appeared painfully strained again by reports of indignation throughout Austria over what is regarded as an offensive inscription on an Italian war monument at Bolzano.

**WASHINGTON:**-With the reported surrender of 188 self confessed Nicaraguan bandits within the last four days, Marine Corps officials here are certain that General Sandino's bitter and costly stand is at an end.

POSTCARD

Mr. P. D. Ruppert  
Le Mars, Iowa

Tuesday 11-29

Dear Dad. Am sailing in this tub  
and the ocean is pretty rough. I don't  
get sea sick but get terrible headaches  
and now bleed. Jack flew to Juneau last  
Friday. We will get there about 2 a.m. It  
is about 3.25 miles from Ketchikan and  
9.25 from Seattle. Putting rain so with  
pleasant on deck either. With us at  
Juneau, Alaska.  
Ada & Shidees.

**ALASKA CARVED IVORY**

Dog Teams, Napkin Rings, Cribbage Boards, Billikins, Paper Knives, Pen Holders, Cigarette Holders, Paper Weights.

Indian Made Slate Totem Poles, Wood Totem Poles, Thlinket and Haida Baskets made from Spruce roots, Cedar bark. Also the famous Attu Baskets, the finest Baskets made. Genuine Chilkat Blankets, all kinds Eskimo Ivory Carvings and Curios.

PRUELL'S GIFT SHOP

All kinds of Alaska Nugget and old Ivory Jewelry, Nugget Chains, Bracelets, Pins, Charms, Knives, Brooches, Belt Buckles, Indian Carved Bracelets, Spoons and Forks. Souvenir Spoons, Old Fossil Walrus Ivory Beads, Souvenirs and Post Cards.

**SHABAHEN AND THE FIRST WHITE MEN—(Continued)**

water from the stream nearby. When the stones were hot he put them into the box with wooden tongs. Then he put in the pieces of fish which he had cut with a shell knife. When the fish was nearly done, Shabahen went to the canoe and brought back a bag made from the stomach of a seal. He opened it and poured oolichan grease into the cooking fish.

When the fish was ready, Shabahen gave large wooden spoons to the white men, and each one dipped his big spoon into the box. By the time they were through eating, the fog had lifted and the Indians saw the sailing ship, the first one they had ever seen. The captain motioned to Shabahen to wait, and he and some of the men rowed out to the ship.

Soon the white men returned with many mysterious looking things, among them a gun, a sharp knife, and a shiny brass kettle. Into the kettle one of the sailors put the fish and some water and set it on the fire. The Indians were amazed for the kettle did not burn up, and when the water began to boil, they looked on in wonder. When the fish was done, the Indians were given white granite plates and shiny metal spoons to eat with. The Indians did not like the fish because there was no oolichan grease in it.

After they were through, Shabahen invited the captain to his own village, indicating its location by drawings on the sand and by sign language. Before leaving, the captain gave Shabahen some pilot bread, a bag of rice, a can of molasses and some tea.

Shabahen and his men watched the white men as long as the ship was in sight; then they examined the things given them. They thought the pilot bread was lichen from trees. "Maggots from dead people," cried one when they looked at the rice. When they looked at the molasses, they thought it was rotten blood from dead people, and they threw it all away. They were afraid to examine the package of tea, and left the place immediately for fear of becoming bewitched.

When the Indians reached the village, Shabahen told Tsiabasha all about their strange adventure with the white men. The chief called his council together to decide what they would do when the strange creatures should visit their village. They gathered together fur, carved boxes, and mats for gifts to the white men, and lots of food for a feast.

About noon the next day the sails of the ship were sighted. The chief and his council dressed up in their ceremonial robes, war paint and feathers, and went down to meet the visitors.

When the captain and his men came ashore, they were escorted to the chief's house where the feast had been prepared. Mats were spread on the floor where the visitors were seated. The Indian doctor sang and danced before the captain, and when the dance was over, dried fish was served, then seaweed chopped finely and cooked in oolichan grease, and then fish eggs dipped in oolichan. When all had eaten, the chief called for soapberries. A new canoe was brought into the house by four young men. Into it was put the dried soapberries and water, which the young

men beat to a froth with their bare hands. It was then served in big wooden spoons. The white men ate of everything served them.

Just before the visitors left, Chief Tsiabasha gave them the presents that had been prepared for them. The captain thanked him with many bows and hand shakes; then he invited the chief and his council to visit them next day aboard the boat.

That night the captain called together his crew and planned the entertainment for the chief and his council. To each of the crew he assigned a part; one was to play a mouth organ, another to dance a jig, and so on, until each had something to do.

Early the next morning the visitors arrived and filled the cabin of the ship to overflowing. The Indians were amazed at what they saw and heard. A mirror hanging on the wall caused much excitement. Presently they heard sweet music. A man was making the music from something he had in his mouth. The player showed them the mouth organ.

When the last of the crew had finished his part in entertaining the visitors, the captain invited them to eat. When the Indians saw the rice, pilot bread and molasses about which Shabahen had told them, and many other things besides, spread on the table, their hearts failed them. But the chief encouraged them to eat. They liked the molasses for it was the first sweet thing they had ever tasted. After eating, the captain gave presents to his visitors. First he gave the chief a gun and some ammunition. To one he gave a butcher knife, to another a mouth organ, to another a hand mirror and so on until he had given each one of the council a present that filled him with wonder. But to Shabahen the captain gave the shiny brass kettle in which he had seen them cook the halibut; that kettle is still in the possession of his family on Dolphin Island. The chief decided to keep all these things hidden from his people, and the coming of the white men from all the other villages. And in the fall he would call together the nine villages of the Tsimpsheans and exhibit all the magic things which they had received.

Early in the fall the big potlatch was held. They came five thousand strong to the Kitkatla village to see the magic powers of Tsiabasha and his council. One man came forward with something gleaming in his hand. Slaves held up mats, fish and skins in front of him, and with a few strokes of the hand they fell to the ground in pieces. The people stood back in awe when Shabahen put his kettle of fish over the fire and they saw it did not burn up. After the council had demonstrated their magic powers, Chief Tsiabasha stepped forward and pointed toward the smoke hole, and instantly there was a loud noise like thunder and lightning. The people all fainted, for they had never heard a gun before.

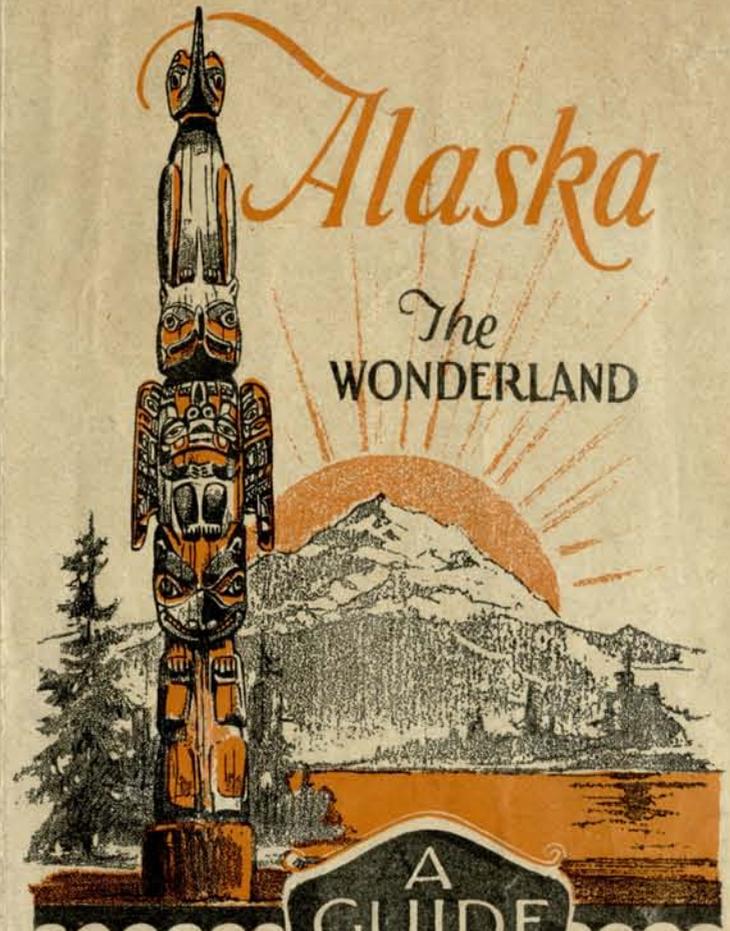

From this time on Tsiabasha became a great chief, and all the other villages looked up to him. It was many years before the other Indians learned about the coming of the white men, and the things they brought with them.

KETCHIKAN, ALASKA

# ❖ A History of Ketchikan and Totemism in Alaska ❖

**K**ETCHIKAN, the first port of entry in southeastern Alaska, is one of the most progressive cities of the north. It is fifty miles north of the international boundary, and six hundred miles northwest of Puget Sound, or about forty-five hours by steamer from Seattle, while from Prince Rupert, the western terminus of the Canadian National Railways, it is only a six hour journey.

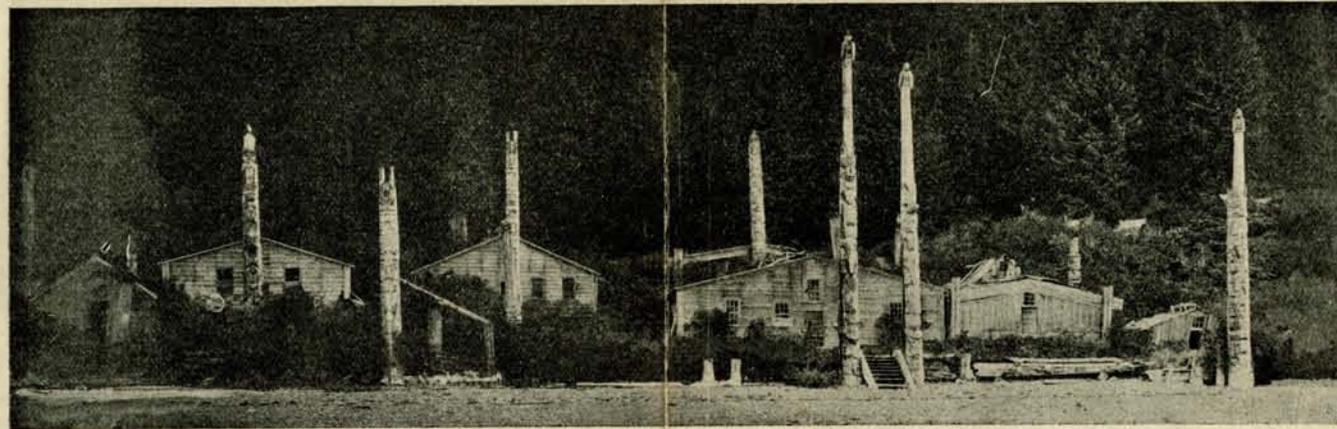

Ketchikan has been built virtually in the last thirty-five years. In 1885 M. E. Martin, representing Portland capital, came to Alaska to find a suitable cannery site, centrally located to the fishing grounds. At that time there were canneries at Quadra, Old Kasaan and Loring, but they were not paying. Mr. Martin and his associates planned to consolidate the three plants at a central point, and Ketchikan was the place chosen.

At that time Ketchikan Creek and the land on each side for several hundred yards was owned as a fishing ground by the Kyan Clan of natives and a Flat-head Indian by the name of Charles Dickenson, better known as "Paper Nose Charlie." Mr. Martin purchased 160 acres of land, including waterfront, from Paper Nose Charlie and in 1887 built a cannery which burned two years later. Mr. Martin and his partner then conducted a saltery until 1898, when gold was discovered, starting a stampede for Ketchikan. Mr. Martin then sold his interest to the Ketchikan Improvement Company for a townsite, and Ketchikan began to grow.

Mr. Martin, who became the first mayor of Ketchikan, prophesied that Ketchikan would become the fishing center of Alaska. His prophecy has been fulfilled, as Ketchikan now has nine salmon canneries, two large cold storage plants for freezing halibut, and is the distributing point for thirty other canneries of this district.

Among the many places of interest are the salmon canneries and cold storage plants, where millions of pounds of halibut are frozen each year; Ketchikan Creek, in which in the latter part of the summer the salmon are so plentiful that you may catch them with your hands; and the Indian burial ground on Pennock Island, just across the channel. It will pay the tourist to stop in Ketchikan at least a week, charter a launch and make a trip around Revillagigedo Island, visit the Bell Island and Bailey Bay Hot Springs, Walker Cove and Rudyerd Bay. The scenery in the last two places surpasses that of the fjords of Norway. The trout fishing on this trip cannot be equalled. It would be time well spent to stop at Bell Island Health Springs to enjoy the hot baths, as they are noted for their medicinal properties. Adequate accommodations are offered there for the visitor.

Ketchikan is also a mining center for copper, gold, platinum, silver, lead and marble. A number of these properties are capable of extensive development when sufficient capital is available. Thirty miles from Ketchikan is the famous Salt Chuck mine, the largest producer of platinum and palladium in the United States. The mine also yields gold, silver and copper.

Old Kasaan, a Haida Village, almost totally destroyed by fire August 15, 1915.

**T**HE word "totem" came into the English language in the form of "totam" through a work published in 1791 by J. Long, an interpreter between the whites and Red Indians of North America. There is no subject pertaining to the natives of Alaska more interesting than totemism, and none about which most people have such vague and unsatisfactory notions. The reticence of the natives, their reluctance to talk to white people on the subject and the absence of any written language, make it very difficult to acquire a true knowledge of it. The average white man can gain no satisfactory knowledge by approaching the natives. The old natives who know will not respond, and the young ones claim to know nothing about it.

Because totem poles consist of carved images, some declare them to be idols. They were never regarded as such by the natives of Alaska. The totem poles of Alaska, while bearing images of creatures, were never erected to represent any imaginary diety or God. Nor were they ever worshipped. They are highly revered because they carry the tribal emblem. What the coat-of-arms or crest is to the English aristocracy, so are the totemic marks to the native families.

The native word for totem is "ko-te-a," meaning image or likeness.

The natives are Darwinians to the very letter. Their belief in the origin of man from animals is expressed not only in their verbal legends but also on their totem poles.

The entire native population of Southeastern Alaska is divided into two great divisions, known as the Eagle or man's totem, and the Crow or woman's totem. The sub-totems of the Eagle are the Bear, Wolf, Whale, Shark, etc., and of the Crow, the Beaver, Frog, Salmon, Seal, etc. Every family must be both of the Eagle and the Crow fraternity, i.e., one of the Bear totem may not marry one of the

Whale, as these belong to the same grand division.

Totemism is recorded history, genealogy, legend, memorial, commemoration and art. The genealogical pole is usually erected directly in front of its owner's house and, as the name indicates, gives the genealogy of the family within. The wife's totem crowns the top; next the husband's, and so on down. Any native passing by and seeing the pole can tell at a glance the clan of the mother, which is the ruling one of the house. From this he will know whether or not he would be welcome to enter and stay there. If the ruling family of the house is not of his totem he passes on.

There are two splendid totem poles in Ketchikan, the Johnson totem, and the Kyan, which is now in front of Pioneer's Hall. This pole is surmounted by the Crane; below is the Kyak, a fabled bird of the mountains, and still below is the grizzly bear. The pole then reads: "I am a member of the Crane clan and am married to a member of the Kyak and the Bear Phratry."

Chief Johnson's totem is surmounted by Kajuk, a fabled bird of the mountains. This bird amuses himself by throwing rocks at ground hogs. Those who find one of these are sure to become rich.

Kajuk is placed high up to show the dignity of the family.

Below are the two servants of the raven. These are the ones that obtained fire for mortals.

The fire was in the west. These two servants stuck their bills into pitch and flew out to the fire.

On their return the fire so heated their bills that under the weight of the burning pitch they bent, and the curve was produced.

Below is the Raven, and still below is the Frog woman with her children, the Salmon.

The Johnson Totem

**W**E EXTEND to the tourist of Ketchikan a cordial invitation to visit our CURIO and JEWELRY store. It will be a pleasure for us to show our curios and tell the many interesting facts in connection with them. Come whether you expect to buy or not.

**A LARGE COLLECTION OF WOOD AND SLATE TOTEMS.** These are of Indian workmanship. The slate for these totems is imported from the Queen Charlotte Islands. It is soft when first quarried, hardening when exposed to the air, thus making it necessary to be worked as soon as quarried.

**ATTU, MAIDEN HAIR FERN AND SPRUCE ROOT BASKETS.** Our assortment of Attu and Spruce Root Baskets is the largest in Alaska. We also have a collection of Cedar and Spruce Root baskets, but they are not as fine as the Spruce Root and Attu baskets. The Attu baskets, in workmanship and material, are finer than the finest Panama hat. These baskets are becoming very rare, as the older Indians are fast disappearing and the young girls have not the patience to weave these fine baskets and card cases. It will be but a few years when the work cannot be bought at any price. Our baskets are dyed with Indian dyes, not with commercial dyes that soon fade, and are sold at Indian prices. We are able to do this as we buy direct from the natives.

**OUR LINE OF POST CARDS, NUGGET AND OLD IVORY JEWELRY** is one of the most complete in Alaska. Old fossil ivory is found by the natives, in the ground, on the shores of the Arctic Ocean, Bering Sea and the North Pacific Ocean, occasionally by miners in shafts and drifts. The fossilized coloring is caused by minerals contained in the earth where it has lain for thousands of years.

There are three kinds of ivory found in Alaska, viz: mammoth, mastodon and walrus. The mastodon and mammoth (according to scientists) lived a hundred thousand years ago. The walrus (*Rosmarus*), a marine animal, still abounds in the Arctic Seas.

This ivory is not plentiful. In the course of a season an Eskimo family will gather a few pieces and bring them to the mission or trading post, receiving "kow-kow" (food) in exchange.

## SHABAHEN AND THE FIRST WHITE MEN

Shabahen lived in the village of Lahklan, which was the oldest of the Kitkatla villages. Tsbasha was the chief of this village, which had a population of about four hundred.

One foggy morning Shabahen and two men went out to fish for halibut. They soon had their canoe filled with halibut, and were ready to return home, when they heard a strange noise. After a while they saw a huge bird flying along on the water, and coming towards them. Shabahen and his men paddled for the shore, and ran into the woods to hide.

Shabahen was going to run up a little hill, when suddenly he fell back, rolled down the slope right in front of where the white men stood. He thought the evil spirit had struck him; he had forgotten the kelp fishing line tied around his waist, and it had caught on some bushes and pulled him back.

When Shabahen looked up, he fainted. He thought the white men were some kind of sea animals. When he came to, the white men were making strange noises that sounded like the speech of the crane to him. The captain motioned to him and with signs made him understand that they wanted some fish. Shabahen called to the other men, telling them that these strange beings wouldn't do them harm, that they were hungry, and that they must cook them some fish.

They went down to the canoe and Shabahen got out his fire box. He took a red cedar board from the box which had a hole in it, and put some fine cedar bark around it. He then took his stick and put one end of it into the hole and twirled the string rapidly. Soon a spark lighted the fine cedar bark, and with this the fire lighted. Then he put some stones in the fire and piled on a great heap of driftwood. The white men were amazed, for they had never seen fire started in this way.

One of the Indians brought a wooden box from the canoe made of one piece bent to make the sides and fastened on the fourth side with wooden pins. The bottom was also held in place by wooden pins. Into the box he put some sea water and some fresh  
(Continued on reverse side)
