

1. INTRODUCTION

In 1973, the Alaska State Legislature enacted Alaska's Limited Entry law (AS 16.43) for commercial fisheries. The law established a new agency, the Commercial Fisheries Entry Commission (CFEC), to administer a program regulating entry into commercial fisheries under state jurisdiction. Limited entry was implemented in most of the salmon fisheries in 1974. By yearend 1999, permanent limited entry permits had been issued in 58 commercial fisheries : 26 salmon fisheries, 17 herring fisheries, 8 crab fisheries, 5 sablefish fisheries, and 2 shrimp fisheries.

A legal prerequisite of the Limited Entry Act was that permits not be locked in the hands of those who were originally issued them (i.e. "initial issuees").¹ After much study and debate, the legislature finally chose free transferability as the method for allowing orderly entry and exit from the fisheries.

Free transferability allows parents to transfer their permits to their children, allows permits to be inherited upon the death of the holder, allows persons to enter and exit fisheries at times opportune to them, and eliminates the need for an expensive and time consuming bureaucratic process to handle permit reallocation. Free transferability facilitates permit exchange and promotes overall efficiency. Many other transfer options were lacking with respect to these criteria.

In 1983, the Alaska Supreme Court ruled on the State of Alaska v. Ostrosky, 667 P.2d 1184 (1983), which challenged the constitutionality of the Limited Entry Act, particularly the free transferability provisions. The Alaska Supreme Court upheld the constitutionality of both the Act and free transferability and also affirmed the legislative objectives in adopting the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the Ostrosky appeal in Ostrosky v. State, 104 S. Ct 2379 (1984), rehearing denied 104 S. Ct. 3572 (1984).

¹ Note that initial issuance refers to the issuance of a new permit whenever this occurred. As some applicants are difficult to classify under a hardship ranking system, a final determination of their standing may come only after an extensive hearing and adjudicatory process. In other instances permits have been issued as lawsuits brought against the Commission are eventually resolved. Thus, some permits have been issued several years after the main body of permits were issued in a given fishery.

Despite the benefits of free transferability, many persons remain concerned that permit transfers may eventually result in undesirable consequences. There is concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are “local” to a limited fishery, thereby eroding the economic base. The legislature has twice ordered studies of transferability options, first upon initial passage of the Act² and again in 1980.³

Because of concerns about free transferability, CFEC has produced this report so that the legislature, the administration, and other interested parties will be kept accurately informed of the facts.

This edition covers the 58 limited fisheries for which permanent permits have been issued in the period 1975 through 1999. It contains detailed information on transfer incidence, the initial geographic distribution of permit holders, changes in the distribution of permits due to permanent transfers of permits and migration of permit holders, and the yearend 1999 geographic distribution of permit holders. Extensive information is also provided on the age distribution of permit holders, age differences between transferors and transferees, rates and characteristics of intra-family and business partner transfers, permit market values, and permit acquisition and financing methods.

² AS 16.43.370(b): “The commission shall study alternative methods of permit transferability and report its findings and recommendations to the legislature before January 15, 1975.” The resulting report was the “Report to the Legislature on Entry Permit Transfers,” CFEC, January 15, 1975.

³ Rodgers, G. and J. Kreinheder, “Socioeconomic Analysis For Fishery Areas and Census Divisions.” Prepared for the Limited Entry Study Committee of Alaska State Legislature, January 21, 1980.

II. TRANSFER INCIDENCE

Statewide Turnover Rates

During the period 1975-1999, 15,254 permanent limited entry permits were issued in 58 fisheries. However, not all of these permits were available for transfer. AS 16.43.250 required that CFEC develop hardship ranking systems ("point systems") to allocate permits, and to determine point levels at which a person would experience only minor economic hardship if excluded from an initial permit allocation. Permanent permits issued to persons classified at minor economic hardship levels were to be nontransferable. By the end of 1999 there were 13,323 transferable permits and 968 nontransferable permits.¹

During this same time span there were 25,197 permanent transfers. Original permit holders transferred 9,856 permits, indicating approximately 74.0% of all transferable permits had changed hands at least once (9,856 out of 13,323 permits) by the end of 1999. Over the entire time period, the average annual number of transfers per number of transferable permits was 9.0% (25,197 total transfers / 280,575 transferable permit-years).

Two types of annual transfer rates are shown in Table 1. The first type is the ratio of the permits transferred for the first time (i.e. from initial issuees) to the number of transferable permits. This ratio would be expected to decline over time if no new permits were issued because each year there would be fewer permits held by initial issuees left to transfer. This transfer ratio has declined from 0.08 to 0.01 over the 1975-1999 time period. The average annual ratio of transfers from initial issuees to transferable permit-years is 0.04 for the entire time period.

The second type of annual transfer rate reported in Table 1 is the ratio of transfers to available transferable permits, which provides a measure of the annual turnover rate for transferable permits. This ratio varied between 0.06 and 0.13 over the 1975-1999 time period, and averaged over 0.09 for

¹ 13,331 transferable permits were initially issued (Table 3), the actual number of transferable permits at the end of 1999 was 13,323 (Tables 1 and 4). These totals differ because 137 transferable permits were revoked and 129 nontransferable permits were reclassified as transferable after receiving additional point awards through adjudication.

all years combined.² As can be seen in Table 1, this transfer ratio dropped below the all-years average in 1989 and has remained relatively low through 1999. The 0.06 ratio in 1999 is the lowest turnover rate recorded since 1975.

Turnover Ratios by Fishery 1975-1999

In Table 2 fisheries were divided into groups based upon the year in which they were limited. Summary transfer rates are provided for each group. The first group consists of the original 19 salmon fisheries for which permanent permits were first issued in 1975, the second group consists of the six Arctic-Yukon-Kuskokwim (AYK) salmon fisheries for which permanent permits were first issued in 1976, and the third group includes the four herring fisheries for which permanent permits were first issued in 1977-1978. A fourth group includes the hand troll fishery, the Prince William Sound (PWS) and Kodiak roe herring fisheries, and the Southeast king and tanner crab and Southeast sablefish fisheries for which permanent permits were first issued during the 1980-1987 time period. The fifth group consists of six westward herring fisheries for which permanent permits were first issued in 1988-1991. The sixth group consists of the Southeast and Cook Inlet Dungeness crab fisheries for which permanent permits were first issued in 1997. The seventh group consists of the PWS sablefish fisheries and the Southeast herring pound and shrimp fisheries for which permanent permits were first issued in 1998. The final group consists of the Goodnews Bay herring gillnet fishery for which permits were first issued in 1999.

Two measures of average annual transfer rates for individual fisheries are shown in Table 2. The first transfer rate is calculated by dividing the cumulative total transfers from initial issuees over the 1975-1999 time period by transferable permit-year counts. The fisheries limited in the most recent years have the highest rates of transfers from initial issuees but this rate is expected to decline over time because each year there will be fewer initial issuees remaining in the fishery.

The second transfer rate is calculated by dividing all permanent transfers over the time period by total transferable permit-year counts. The permit-year count represents a summation of the number of

² Because some permits may be transferred more than once during a year, the ratio of permits transferred to available transferable permits would be slightly less.

transferable permits existing at the end of each year. These rates are comparable to the all-years statewide summary rates presented in Table 1.

For the second type of turnover rate (ratio of transfers to transferable permit-years), the transfer rates vary considerably by fishery. The transfer rates for about one half of the fisheries are 0.10 or greater when averaged across all years. Some of the fisheries with lower annual average rates are all of the AYK salmon fisheries and westward herring fisheries except for Norton Sound herring gill net, the Chignik salmon purse seine and the Southeast roe herring purse seine fisheries.

The annual transfer rate within a fishery may vary considerably from year to year. This is demonstrated in Appendix B where the number of transferable permits, number of transfers, and the transfer rates for each year are presented for individual fisheries. The yearly number of permanent transfers has been relatively low in many fisheries since 1989.

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

The effects of permit transfers and migration of permit holders are examined in this portion of the report. Both statewide and fishery-specific information is provided.

Classification of Permit Holders

In order to measure the changes in the distribution of permits, permit holders have been classified into broad categories according to where they reside. Langdon¹ divided a fishery's permit holders who were residents of Alaska into those who had domiciles which were "local" and those who were "nonlocal" to the fishery. He further defined Alaskan domiciles as "rural" or "urban." Non-Alaskans were lumped into a single "nonresident" category.

Langdon's conceptual categories are a useful way to examine the geographic distribution of permits and are used in this report. The resident types are:

ARL: Alaska resident of a **Rural** community which is **Local** to the fishery for which the permit applies;

ARN: Alaska resident of a **Rural** community which is **Nonlocal** to the fishery for which the permit applies;

AUL: Alaska resident of an **Urban** community which is **Local** to the fishery for which the permit applies;²

AUN: Alaska resident of an **Urban** community which is **Nonlocal** to the fishery for which the permit applies;

NON: Nonresident of Alaska;

DCED/CFAB: Signifies permits which have been foreclosed upon by the Department of Community and Economic Development (DCED) or by the Commercial Fishing and Agriculture Bank (CFAB) and have yet to be transferred.

Combinations of these resident types are also used in this report. In some cases, ARLs and ARNs will be combined into a "rural" category; AULs and AUNs into an "urban" category; ARLs and AULs

¹ Langdon, S. "Transfer Patterns in Alaskan Limited Fisheries" January 17, 1980.

into a "local" category; ARNs and AUNs into a "nonlocal" category; and ARLs, ARNs, AULs, and AUNs into an "Alaskan" category.

The numbers of Alaskans and nonresidents presented in this report may differ from other CFEC publications (specifically CFEC Annual Reports) because a more conservative residency definition is used. For this report, to be classified as an Alaska resident, a permit holder must have sworn that they are an Alaska resident on permit renewal or transfer forms, and they must also have provided an Alaskan address. (CFEC Annual Reports produce resident/nonresident totals based upon the residency status from the permit renewal form only.)

The decision rules for designating urban and local classifications are described in Appendix A. Essentially the rural/urban distinction is based on a population size of 2,500 or more, as of the 1990 census, which is a departure from the 2,000 level used in the pre-1990 editions of this report. Some communities with populations less than 2,500 are classified as urban because they lie on a road system and are within a certain radius of an urban center. For instance, Auke Bay is designated as urban, even though it has a small population, because it is situated on a road system and is within 20 miles of Juneau.

The local/nonlocal distinction is primarily based on the Alaska Department of Fish and Game's salmon administrative areas. Some inland communities are considered local to fisheries in areas such as the Yukon River and Bristol Bay. A thorough description of local/nonlocal decision rules can be found in Appendix A.

Prior to 1978 the resident type classifications were based on the address provided to CFEC by the permit holder during the issuance, renewal and transfer processes. During those early years, some nonresidents listed an Alaskan address and were classified as Alaska residents. After 1978, CFEC renewal and transfer forms included a sworn declaration of residency, and resident/nonresident data have become more accurate in later years.

² The Alaska Urban Local category is not applicable for several administrative areas which have no local communities classified as urban. These include the salmon administration areas of Yakutat, Chignik, Bristol Bay, and the Lower Yukon and the herring administrative areas of Bristol Bay, the Lower Yukon, Nelson Island, Nunivak Island and Goodnews Bay.

Beginning in 1982, permit renewal forms included space for both a permanent address and a temporary mailing address, but for the 1975-1981 period there was only one address on the form. In some cases, this address may actually have been a temporary mailing address on the fishing grounds and the permit holder could have been mistakenly classified as local to the fishery. The number of fishermen who have been misclassified because of this problem is unknown; however, this source of error appears to be fairly small, and from 1982 forward temporary mailing addresses should not be a major cause of erroneous resident classifications.³

Geographic Distribution of Initial Issues

Hardship ranking systems, or "point systems," based upon past participation and economic dependence were developed for each fishery and used to allocate the original permits. The resulting distribution of both transferable and nontransferable permits among the resident types appears in Table 3.

Over all fisheries, Alaska residents received 82.2% (12,540 permits) of the initial allocation of permits and Nonresidents received 17.8% (2,714 permits) through 1999. Of the 13,331 transferable permits issued, Alaska Rural Local applicants received more permits than any other resident type (6,370 permits or 47.8%). The Alaska Urban Locals received 3,109 permits (23.3%) and the Nonresidents received 2,546 permits (19.1%). Less than 10% of the transferable permits were issued to the combined Alaska Rural Nonlocal (407 permits or 3.1%) and Urban Nonlocal resident types (899 permits or 6.7%).

The percentages of transferable permits issued to the resident types vary widely between individual fisheries and between groups of fisheries. For example, Alaska Rural Locals were issued 39.0% of the 8,086 transferable permits in the group of original 19 salmon fisheries, 80.0% of the transferable AYK salmon permits. Alaska Rural Locals were also issued 20.0% of the transferable permits in the roe herring fisheries in which permits were first issued in 1977-1978, 39.6% of the transferable permits for fisheries in which permits were first issued in 1980-1987, 79.4% of the transferable westward herring roe fisheries in which permits were first issued in 1988-1991, 28.9% of the

³ The first edition of this report (1983) estimated the number of transfers involving permit holders who used an "in care of" address at 2%. Since then there have been major permit file data corrections which included replacing temporary mailing addresses with permanent addresses.

transferable Dungeness fisheries in which permits were first issued in 1997, 43.9% of the transferable PWS sablefish and Southeast herring pound and Southeast shrimp fisheries in which permits were first issued in 1998, and 32.9% of the transferable Goodnews Bay herring gillnet fishery in which permits were first issued in 1999.

By the end of 1999, the distribution of permits among the resident types had changed to the levels shown in Table 4. Alaska Residents held 77.8% (11,113 permits) of all permits and Nonresidents held 22.2% (3,178 permits). At the end of 1999, residents held 76.8% (10,229 permits) and nonresidents held 23.1% (3,078 permits) of the 13,323 existing transferable permits. Sixteen transferable permits had been foreclosed upon by the Department of Community and Economic Development or the Commercial Fishing and Agriculture Bank and had yet to be transferred.

Changes in the distribution of all permits to assigned residency types includes a 20.1% (1,417 permits) decrease in the total number of permits held by Alaska Rural Locals from the time of initial issue to yearend 1999. At yearend 1999, Alaska Rural Locals held 50.7% of all Resident permits (5,635 out of 11,113) and 39.4% of the total permits (5,635 out of 14,291). Alaska Rural Locals held 51.3% (5,243 out of 10,229) of the transferable permits held by Alaskan residents and 39.4% of all transferable permits (5,243 out of 13,323). Generally, Alaska Rural Locals have experienced the largest percentage decreases of transferable permits in the fisheries which have been limited the longest.

The total number of permits held by Alaska Urban Locals decreased by 571 (14.0%) permits by the end of 1999. The total number of permits held by Alaska Urban Nonlocals increased by 516 permits, a 52.6% increase, the largest percent change of any residency type. Alaska Rural Nonlocals and Nonresidents also increased their holdings of permits: 6.7% (29 permits) for Nonlocals and 17.1% (464 permits) for Nonresidents.

Geographic Changes in the Distribution of Permits Due to Transfer

To examine the geographical changes in permit distribution attributable to transfer activity, transfers have been divided into two groups: one containing transfers between permit holders of the same resident type and the other containing transfers between persons of different resident types. Transfers

within the same resident type are termed "intra-cohort" while transfers between different resident types are termed "cross-cohort." Cross-cohort transfers may result in a net change in the distribution of permits among the resident types.

The 25,197 transfers are organized into these categories in Table 5 and the actual numbers of transfers from one resident type to another are presented by year. The majority of all transfers in each year have been between persons of the same resident type. The annual percentage of intra-cohort transfers was highest in the early years from 1975 to 1981. The average intra-cohort transfer percentage was 63.9% over all years.

The percentage of intra-cohort to cross-cohort transfers varies by resident type. Alaska Urban Locals have the highest proportion of intra-cohort transfers (69.7% of their transfers over all years) and Alaska Rural Nonlocals the lowest (36.7%). Alaska Urban Nonlocals also show a lower than average percentage of transfers to persons of the same resident type (51.9%). Alaska Rural Locals and Nonresidents have similar proportions of intra-cohort transfers (65.9% and 64.7%, respectively).

Information on the intra-cohort and cross-cohort transfers for each fishery, all years combined, is provided in Table 6. With few exceptions, the majority of transfers within each fishery have been intra-cohort.

The cumulative net results of cross-cohort transfers to each resident type, by fishery, are shown in Table 7. Note that if transfers have not occurred in a particular fishery, that fishery does not appear in the table. By yearend 1999, the following changes had occurred in the distribution of transferable permits as a result of cross-cohort transfer activity:

1. Permits held by Alaska Rural Locals decreased in 34 of the listed fisheries as a result of cross-cohort transfer activity, which resulted in a statewide net decrease of 710 ARL permits (11.1% of the 6,370 transferable permits originally issued to ARLs). The Bristol Bay drift and set gillnet fisheries have had the largest numerical net decreases due to transfer activity (391 permits combined) which represent 55.1% of the 710 permit decrease. This 391 permit decrease is 31.2% of the 1,252 transferable permits originally issued to ARLs in these two fisheries.
2. Permits held by Alaska Rural Nonlocals increased by 33 permits due to net transfer activity, an 8.1% increase of the 407 transferable permits issued to this resident type.

3. Permits held by Alaska Urban Locals increased by 117 permits due to net transfer activity (3.8% of the 3,109 transferable permits originally issued to this group). The largest net increases were in the power troll (38 permits), and the Kodiak salmon seine (42 permits) and Kodiak salmon setnet (37 permits) fisheries. In contrast, the number of permits held by Urban Locals decreased in 18 other fisheries.

4. Permits held by Alaska Urban Nonlocals have increased by 404 permits, a 44.9% increase over the 899 transferable permits initially issued to this resident type. The number of transferable permits held by Alaska Urban Nonlocals has increased in 30 fisheries, especially the Bristol Bay salmon fisheries (177 permits), the Prince William Sound salmon fisheries (118 permits), and the Lower Yukon salmon gillnet fishery (25 permits).

5. The number of permits held by Nonresidents increased by 140 permits statewide through net transfer activity, a 5.5% increase over the 2,546 nonresident transferable permits originally issued to nonresidents. The number of transferable permits increased in 19 of the fisheries, especially the Bristol Bay salmon fisheries (225 permits), the salmon hand troll fishery (55 permits), the Cook Inlet salmon setnet fishery (35 permits) and the Southeast salmon seine (15 permits) fishery.

In 27 other fisheries the number of permits held by Nonresidents decreased, especially the power troll (99 permits), the Kodiak salmon seine (49 permits) and setnet (31 permits), and the Cook Inlet drift gillnet (26 permits) fisheries.

Geographic Changes in the Distribution of Permits Due to Migration

Other changes in residency patterns of permit distribution occur when permit holders move from one community to another. During the 1975-1999 time period there were 7,452 city and/or residence indicator changes which resulted in a resident type reclassification and have been defined as "migrations" for the purposes of this report.

Migrations to and from each resident type for both transferable and nontransferable permits are shown in Table 8. In general, there appears to be considerable movement both to and from each resident type.⁴ The net results of migratory activity to each resident type over the entire period are shown by fishery in Table 9. Some recently limited fisheries have had no migratory activity and are thus not listed in these tables.

⁴ The extent of migration before 1982 might be overstated because of the use of temporary mailing addresses during the permit renewal process. As noted previously, this problem has been reduced by recent form revisions which allow for both a permanent address and a temporary mailing address.

The 1975-1999 geographical shifts in the distribution of permits due to migration can be briefly summarized as follows:

1. Statewide, the number of permits held by Alaska Rural Locals decreased by 453 permits due to migration. Migratory activities did not affect all fisheries in the same manner, however. There were ARL net decreases in 37 permit types and ARL net increases in 5 others.

The number of permits held by ARLs decreased primarily in the AYK salmon fisheries (157 permits), the Bristol Bay setnet fishery (59 permits), the Prince William Sound salmon seine fishery (41 permits), and the hand troll fishery (40 permits). ARL gains through migration were made in the Cook Inlet setnet (14 permits), Chignik seine (14 permits) and Southeast drift gillnet fisheries (11 permits).

2. The number of permits held by Alaska Rural Nonlocals increased by 8 due to net migration. Fisheries with the greatest amount of increase were the AYK salmon fisheries (45 permits) and the Kodiak salmon seine (8 permits).

3. The number of permits held by Alaskan Urban Locals decreased by 219 as the result of net migration. The decrease was primarily in the hand troll (64 permits), the Cook Inlet setnet (48 permits), and the Kodiak salmon seine (39 permits).

4. The number of permits held by Alaskan Urban Nonlocals increased by 181. Permits held by AUNs increased by 101 permits in the AYK salmon fisheries and 30 permits in the hand troll fishery. However, there were net decreases in 11 fisheries, particularly in the herring fisheries limited in 1977-78 (25 permits).

5. Alaska residents who moved out of state resulted in a net increase of 483 Nonresident permits. The Nonresident category shows net changes in the number of permits in 44 different permit types, 40 of which indicate net increases. The largest net increases in permits held by Nonresidents were in the Bristol Bay salmon fisheries (102 permits), the Kodiak purse seine and setnet salmon fisheries (68 permits), the hand troll fishery (71 permits), and the Cook Inlet salmon fisheries (66 permits). The Southeast drift gillnet fishery had the largest gain in the number of Alaska resident permits (13 permits) from nonresidents.

Summary of Changes in Permits Held by Resident Type

A yearly summary of the net changes in the distribution of permits by resident type as a result of transfers, migrations and revocations is provided in Table 10. The cumulative effects of these changes are summarized below:

1. Alaska Rural Locals were issued 7,052 permits, (transferable and nontransferable, Table 3) through yearend 1999, which represented 46.2% of all permits. At yearend 1999, 5,635 (39.4%) of all permits were held by ARLs (Table 4). The decrease of 1,417 permits represents 20.1% of all permits originally issued to this group. Transfer activities account for 50.1% of the decrease (710 permits) followed by migration (32.0% or 453 permits) and revocations (17.9% or 254 permits).

The number of permits held by Alaska Rural Locals declined in nearly every year since 1977. Since 1987, migration of permit holders away from rural local communities has accounted for most of the decrease, whereas transfers accounted for most of the decline before 1987.

2. Alaska Rural Nonlocals were initially issued 431 permits (2.8% of all permits). By the end of 1999, the number of permits held by ARNs rose to 460 (3.2% of all permits). The increase of 29 permits represents a 6.7% increase over the number of permits originally issued to this group. The net increase comes from transfer activity (33 permits) and migration (8 permits).

3. Alaska Urban Locals received 4,076 of all permits issued through 1999 (26.7% of all permits). They held 3,505 permits at yearend 1999 (24.5% of all permits), a decrease of 571 permits. Revocations of permits (469 permits) have been the major factor in this decrease.

Transfer activities resulted in a net increase of Alaska Urban Local permits due to large gains over the 1975 through 1981 period. However, beginning in 1982 and continuing through 1995, transfer activities reduced the number of permits held by Alaska Urban Locals.

4. Alaska Urban Nonlocals received 981 (6.4%) of all permits issued through 1999. At the end of 1999, the number of permits held by AUNs had risen to 1,497 (10.5% of all permits). The increase of 516 permits represents a 52.6% increase over the number of permits originally issued to this group. Transfer activities have been primarily responsible for the increase, with net increases shown in nearly every year from 1979 through 1995.

5. Nonresidents received 2,714 of all permits issued through 1999 (17.8% of all permits). By the end of 1999, 3,178 permits were held by Nonresidents (22.2%). The 464 net permit increase represents a 17.1% increase over the number of permits originally issued to this group.

Annual net changes in the number of permits held by Nonresidents due to transfer and migration have fluctuated greatly. The recent net change from 1986 through 1999 has been influenced more by migration (494 permit increase) than by transfer (32 permit decrease).

Appendix C documents initial issuance, transfer, migration, and revocation of permits by fishery and by year for each of the resident types. An in-depth analysis of the movements of permits from Alaska Rural Local permit holders and from the Alaska Local permit holders (combined group of Alaska Rural Locals and Alaska Urban Locals) will be presented in subsequent chapters of this report.

IV. AGE PATTERNS AMONG PERMIT HOLDERS

A concern of the drafters of the Limited Entry Act was that limited fisheries would remain accessible to younger Alaskans. This section examines ages of permit holders, transferors, and transferees over the 1975-1999 time period. Excluded from the data are nontransferable permits and permits which were foreclosed upon by the Department of Community and Economic Development or the Commercial Fishing and Agriculture Bank.

Yearly mean ages for all transferable permit holders, transferors and transferees are shown in Table 11. If no permits were transferred at all, the mean age of permit holders would logically increase by one year each year. However, the mean age actually declined from about 43 in 1975 to 41 in 1977 and continued at approximately that level through 1986. The mean age then began to slowly increase to 46 years at yearend 1999. There are at least two possible explanations for this increase. There have been fewer transfers in recent years (and therefore less influence from younger people entering the fisheries), and the average age of the transferees has increased.

During the 1975-1983 period, the statewide annual mean age of transferees was consistently between 32 and 34 years. Beginning in 1984 the annual mean age of transferees rose to approximately 35 years and has gradually increased since then.

The statewide annual mean age of transferors was highest in 1975 at 51 years, shortly after the first limited entry permits were issued. It then declined to 41 years by 1979, then rose to stay in the range of 43 to 44 years from 1980 to 1990. Since then, the annual transferor mean age has gradually increased to 48 years in 1999.

Overall, the age difference between transferors and transferees was greatest in the early years of the limited entry program, particularly prior to 1978. From 1984 to 1994 the overall age difference varied little and was between 7 and 9 years. In 1995 the age difference between transferors and transferees increased to just under 10 years, the highest level since 1983. In 1999 the difference was again slightly less than 10 years.

Annual mean ages for yearend permit holders, transferors and transferees in specific fisheries are presented in Table 12. At yearend 1999, the fisheries with some of the highest mean ages of yearend permit holders were the Southeast power troll (52 years), Southeast herring seine (53 years), Norton Sound herring beach seine (53 years) and the Upper Yukon gillnet fisheries (55 years).

The Bristol Bay herring spawn on kelp (39 years) was the only fishery with a yearend 1999 mean permit holder age of less than 40.

The annual mean age for yearend permit holders, transferors, and transferees is presented in Table 13 by resident type. The highest mean age for yearend permit holders in 1999 was for Nonresidents (48 years) and the lowest was for Alaska Rural Locals and Alaska Urban Nonlocals (45 years).

In 1999, Alaska Urban Nonlocals had the lowest (42 years) mean age of transferors. The remaining resident types had a mean age of transferor between 44 and 51 years. Generally, the annual mean ages of permit holders for each resident type paralleled the ages of all permit holders; that is, a relatively high average age in 1975, followed by years of decreasing average age, then a gradual increase beginning in the early 1980s and continuing through 1999.

Annual mean ages of transferees have also gradually increased within each resident type. Nonresident transferees tended to be a little older (34 to 41 years) and Alaska Rural Local transferees a little younger (29 to 37 years). Since 1975 Alaska Rural Locals and Alaska Rural Nonlocals tended to be the youngest recipients of transferred permits. The mean ages of transferees for the remaining Alaska resident types ranged between 32 and 40 years. At yearend 1999, Nonresidents had the highest mean age of transferees (41 years) and Alaska Rural Locals, Alaska Rural Nonlocals, and Alaska Urban Nonlocals had the lowest (36 years).

The annual age class distributions of yearend transferable permit holders are shown in more detail in Table 14. The figures in parentheses indicate the yearly percent each age class represents of all transferable permits held by a particular resident type (i.e., a row percentage). The percentage of permit holders in the 21 to 30 year old and 31 to 40 year old categories appears to be generally decreasing with time for most of the resident types. The decrease was balanced by an increase in the percentage of permit holders in the 41 to 50 year old, the 51-60 year old, and over 60 year old

categories, and was probably related to fewer transfers in recent years and the increase in the average age of transferees. Mean ages by resident type by year are provided for specific fisheries in Table 15.

TABLE 11. Mean Ages of Transferable Permit Holders, Transferors, Transferees, and Mean Age Differences Between Transferors and Transferees, by Year

* The number of transferable permits and the number of transfers exclude foreclosed permits.

Mean ages may be based on fewer observations than the number of permits because of missing birth date information.

** Age information is confidential when there are fewer than four permits.

**Age information is confidential when there are fewer than four permits.

V. TRANSFER SURVEY RESULTS

CFEC has conducted a survey of transfer participants since 1975. The survey collects information on the relationship between transfer parties, whether the transfer was a gift, sale, trade or inheritance, and for sale transfers, the type of financing used and the sales price. The survey has been the sole source of information for CFEC permit price estimates which are used by the Department of Community and Economic Development and the Alaska Commercial Fishing and Agriculture Bank for fishing loan purposes.

During the period 1975-1979 the survey was sent to all transferors and transferees, but its completion was entirely voluntary and anonymous. Because many surveys were not returned and because those that were returned could not be tied to other CFEC data, their usefulness was somewhat limited. Information from these 1975-1979 transfer surveys is not included in this report, but may be found in the first edition published in 1983.¹

In 1980 the survey was modified. It was tied to other CFEC data sources, and made mandatory for the transferee to complete. In late 1983 the survey was expanded to include information from the transferor. Transfer survey results from the 1980-1999 time period are presented in the following tables.

Even though the survey was made mandatory in 1980, strict enforcement of this rule did not occur until 1981. There were 139 transfers in 1980 and 15 transfers in 1981 without completed surveys.

Note that in every year some transfers occurred for which a transfer survey was not completed, this accounts for the slight differences in the "Totals" columns between Table 1 and the tables in this chapter. The majority of transfers without surveys occur on foreclosed permits. Overall, the surveys represent 98.4% of all transfers since 1980 (19,881 of 20,200 transfers).

Relationships of Transfer Participants

Of the 19,881 transfer surveys received during 1980-1999, 39.2% (7,796 surveys) indicated a transfer between immediate family members or other relatives, and 19.8% (3,932 surveys) indicated a transfer between friends or business partners. Permit exchanges between people who appeared to have no pre-existing relationship accounted for the remaining 8,152 transfer surveys (41.0%) (Table 16).² Many individual fisheries differ from the all years' statewide percentages.

From 1981-1988 the percentage of transfers between friend/partners decreased while from 1989-1999 the percentage of transfers between friend/partners has remained relatively constant. The rewording of the “Friend” category on the survey form to “Personal Friend” in October of 1983 may be responsible for part of this decrease and may also account for the relatively sharp increase in the number of transfers between persons in the “Other” category in 1984.

When transfers are organized by the resident type of the transferee, considerable variation in relationship patterns is evident among resident types (Table 17). Over half of the transfers to Alaska Rural Locals, for all years combined, were from immediate family members and relatives (57.7% or 3,392 transfers), which is almost double that of any other resident type. In the remaining resident types, the “Other” category predominated.

Permit Acquisition Method: Gift, Sale, Trade, and Other

Under the Limited Entry Act's terms of free transferability, permits may be sold, traded, given away or inherited, thus enabling new participants to enter a fishery. During the 1980-1999 time period transfer survey responses indicated that 59.5% of transfers for all fisheries were sales (11,837 transfers), 34.8% were gifts (6,916 transfers), and 1.7% were trades (344 transfers). The remaining 782 transfers in the “Other” category comprised 3.9% of the survey responses (Table 18).

¹ CFEC “Changes in the Distribution of Permit Ownership in Alaska’s Limited Fisheries, 1975-1981,” February 1983.

² If no transfers have occurred in a particular fishery, that fishery will not be shown on the table.

The incidence of gift transactions has accounted for roughly 30 to 40% of all transfers since 1980.

Because gifts accounted for only 21.5% of all transfer survey responses in the 1975-1979 time period,³ it has been suggested that the 1980-1999 percentage increase may be a result of regulatory attempts to enforce the leasing prohibition. If so, some of the “Gift” responses may actually represent lease arrangements or carry reciprocal expectations.

Individual fisheries often differ considerably from the statewide averages. While sale transactions predominated in most fisheries, gifts represented at least half of the 1980-1999 survey responses in 16 permit types. Fisheries with lower permit values tend to have higher proportions of gift transactions than fisheries with higher permit values. Notable exceptions are the Peninsula/Aleutian salmon seine fisheries (high percentage of gifts and high permit values), and the hand troll fishery (low percentage of gifts and a low permit value) (Tables 18 and 20).

A breakdown of acquisition methods by the resident type of the transferee is presented in Table 19. Since 1980, a majority of the Alaska Rural Locals who have obtained permits through transfer have received them as gifts (51.3%). Sales have accounted for 62% to 69% of the transfers to each of the other resident types over the time period.

Permit Prices

In Table 20, mean and median permit prices are given by permit type and year for permit sales during the period 1980 through 1999. Surveys that indicated permit prices of less than \$500 have been excluded from the computations.⁴ To preserve confidential data, price statistics are not computed for fisheries in years with less than four sales transactions; also, no value will be reported for a permit if there were no sales transactions for that permit in a year. All of the prices are in nominal dollars which do not reflect adjustments for general price inflation.

³ CFEC “Changes in the Distribution of Permit Ownership in Alaska’s Limited Fisheries, 1975-1981,” February 1983.

⁴ Permit price estimates produced for this report may differ from the CFEC estimated monthly permit value report due to the more stringent exclusion criteria used for the monthly report.

Permit prices for the same gear type used in different areas of the state vary greatly (Table 20). For example, the median price of salmon drift gillnet permits varied in 1999 from \$25,000 (Cook Inlet) to \$138,000 (Peninsula/Aleutian).

Generally, nominal permit prices over the 1980-1999 time period have tended to increase through 1990, then fall from 1991 to 1999, especially in the salmon fisheries. Permit prices have remained fairly stable in the hand troll and AYK salmon fisheries.

Financing of Permit Purchases

Transfer survey information on sources of financing used for 11,837 permit purchases is presented by fishery and year in Table 21. Beginning in 1990, additional data has been utilized from surveys in which more than one finance method was indicated. The decision rules used in analyzing these data are listed at the end of this chapter.

Statewide, self-financing of permits has been the predominant method of finance, accounting for 58.4% of all purchases during the 1980-1999 time period (6,912 permits). The next most important source of financing has been the Department of Community and Economic Development's loan program with 18.5% (2,192 permits).⁵ Transferors financed 9.5% (1,123 permits), banks and other private lending institutions financed 7.6% (896 permits), the Commercial Fishing and Agriculture Bank financed 2.4% (287 permits), and processors financed 1.4% (166 permits) of the permit purchases. The remaining 261 (2.2%) survey responses which indicated multiple finance sources were placed in the combination category.

Both the percentage and the number of permit sales financed by the transferor have declined significantly since 1980 (Table 21). In 1980, 142 transfers were financed by the seller (27.7%); in 1999 only one transfer was seller-financed (0.2%). The percentage of self-financed purchases has tended to increase over the time period and the percentage of sales financed by DCED has been lower since the high in 1982.

Sources of permit financing by resident type and year derived from the Transfer Survey are provided in Table 22. The most commonly used methods of financing for the 8,193 permits

⁵ The percentage of State-financed permits increases to 26.6% when only the purchases by Alaskan residents are considered (Table 22).

purchased by Alaskan residents were the personal resources (Self/Other) of the transferee (52.9% or 4,335 sales) and DCED authorized loans (26.6% or 2,179 sales). Urban Alaska residents have received about two-thirds (1,433 of 2,179) of the DCED loans. Nonresidents have the highest rates of self-financing (70.7%) and of financing through the transferor (13.7%) of the permit.

Finance source data from 1980-1999 have been re-evaluated in the following manner:

1. Survey respondents may mark “Other” on the survey form if they feel that their source of financing does not fit into the categories of personal resources, DCED loan, CFAB loan, other bank loans, transferor, or processor. A review of the comments associated with the surveys marked “Other” revealed that a large number of these involved unique methods of self-financing or loans from relatives or friends. Because of the strong association of the “Other” financing with that of the personal resources financing, those responses were combined and classified under a new “Self/Other” category thus eliminating the non-descriptive “Other” category for the purposes of this report.
2. For surveys where two finance sources were indicated but one of those sources was “Self/Other”, the finance source reported in tables of this study is that of the alternative finance source (other than the “Self/Other” category). The self-financing associated with permits financed by multiple methods is primarily in the form of a down payment or interim financing. The “Self/Other” category is intended to be representative of permit purchases that are primarily financed by personal resources rather than simply purchases involving a down payment (many financing methods involve a down payment).
3. Surveys involving three finance sources as well as the remainder of the two finance source surveys (i.e. those surveys that did not indicate “Self/Other”) are reported under the category of “Combination” financing in subsequent tables of this study.

* Footnotes:

Because permit prices of less than \$500 are excluded, average permit values in this table will vary somewhat from those reported in CFEC Annual Reports, which use different exclusionary criteria.

All instances where there are less than four transactions are masked due to confidentiality statutes.

Transfer survey information for Department of Community foreclosures are also excluded, however transfers from the Department of Community to other Alaskans are included.

TABLE 21. Sources of Permit Financing by Fishery and Year (From 1980-1999 Survey Data).*

* This table includes only those cases where survey respondents indicated that they had purchased their permit.

VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

The long-term effects of limited entry on rural communities dependent upon fishing have been of considerable interest to the legislature, the administration and the public, especially the degree to which limited entry permits have been transferred away from these communities. Since 1975, about two-thirds (66.9%) of the 8,036 transfers made by Alaska Rural Locals have been to other Alaska Rural Locals. This percentage has been relatively consistent, ranging from a low of 60.8% in 1982 to a high of 74.7% in 1999 (Table 5). The remaining 33.1% (2,656) of the transfers since 1975 have been to other resident types (cross-cohort transfers). This section will present information regarding only the cross-cohort transfers from Alaska Rural Local residents.

In every year except 1975, 1990, 1997 and 1999, cross-cohort transfers by ARLs have resulted in a net decrease in ARL-held permits -- in other words, ARLs have transferred more permits to other resident types than other resident types have transferred to them (Table 23). Through 1999, this cross-cohort transfer activity has resulted in a net decrease of 710 transferable permits held by Alaska Rural Locals. Each of the other resident types gained permits through their transfer activity with Alaska Rural Locals; the net gains were as follows: Alaska Urban Nonlocals gained 27 permits, Alaska Urban Locals gained 79 permits, Alaska Rural Nonlocals gained 309 permits, and Nonresidents had a net gain of 275 permits. Note that each of the resident types may have either gained or lost permits in exchanges with other resident types besides Alaska Rural Locals.

From 1977 through 1986, decreases of permits held by Alaska Rural Locals due to net transfer activity ranged from 23 to 93 permits per year. Since then the annual net decreases have been substantially less, and in 1990, 1997 and 1999, the number of permits held by Alaska Rural Locals increased as the net result of transfer activity.

Net transfer activity of Rural Local permits is presented in Table 24 for each fishery for all years combined. Similar data are presented in Appendix D by fishery and year.¹ The Bristol Bay drift and set gillnet fisheries have had the largest net numerical decreases in rural local permits due to transfer

¹ If there have not been any transfers of a particular permit type, that permit/fishery will not be listed on the tables.

activity (222 and 169 permits, respectively), which represents 55.1% (391 of 710 permits) of the statewide ARL net transfer decrease.

While the Bristol Bay fisheries have had the highest numerical decreases in the number of permits held by ARLs, other fisheries have had larger proportional decreases. There are 8 fisheries (other than Bristol Bay fisheries) with more than 5 permits issued to ARLs with net decreases greater than 25%

Table 25 provides information concerning the relationships between transfer parties for 2,047 Alaska Rural Local cross-cohort transfers that occurred over the 1980-1999 time period. The information comes from the CFEC transfer survey. As might be expected, most (61.5%) cross-cohort transfers of ARL-held permits were between persons who had no previous relationship.²

The acquisition method used in permit transfers from Alaska Rural Locals to other resident types for the 1980-1999 period is presented in Table 26. Most (78.2%) of these cross-cohort transfers were sales (1,601 of 2,047).

Transfer survey information on financing methods used in the permit sales from Alaska Rural Locals to other resident types is provided in Table 27 by fishery and year. The predominant source of financing has been the personal resources of the buyer (62.0%). DCED loans are also an important source of financing for buyers of permits held by ARLs (17.6%). These figures differ from the Alaska resident totals in Table 22 and suggest that other resident types who buy ARL-held permits tend to rely slightly more on self-financing and banks and less on state loans than do Alaska residents as a whole.

The survey information also indicates that since 1984 there has been a sharp decrease in the number of sales of ARL-held permits which have been financed by the transferor.

² The relationship question in the Transfer Survey form was reworded in October 1983 from “friend” to “personal friend.” This rewording may be responsible for part of the increase in the percentage of “other” responses after 1983.

* This table includes only those surveys where respondents indicated that they had purchased their permit.

VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO OTHER RESIDENT TYPES

Local Alaskan permits, which are the combined permits from Alaska Rural Local and Alaska Urban Local resident types, are the focus of this section. Alaska local permits are defined as those held by persons who reside in the area near a limited fishery. Since 1975, 78.9% (11,318 transfers) of all transfers from Local Alaskans (14,339 transfers) were made to other Local Alaskans. The remaining 21.1% (3,021 transfers) were made to other resident types. Tables are provided on the cross-cohort transfers between Alaska Local permit holders and other resident types. They are similar to tables in the previous section on Alaska Rural Locals.

In every year over the 1977-1996 time period, the number of permits held by Alaska Locals declined as a result of transfer activities with the Nonresident and Nonlocal resident types (Table 28). However, in 1997, 1998, and 1999 the number of permits held by Alaska Locals increased by 51, 18, and 36 permits, respectively, as the net result of transfer activities. Over the 1975-1999 time period Alaskan Locals transferred 3,021 permits to other resident types. Alaskan Locals received 2,428 permits from other resident types which resulted in a net decrease of 593 locally held permits. Total net decreases were greatest in the years 1978 through 1986.

The corresponding net increases within the other resident types were 328 permits to Alaska Urban Nonlocals (55.3%), 212 permits to Nonresidents (35.8%) and 25 permits to Alaska Rural Nonlocals (4.2%). Transfers to the DCED or CFAB through loan foreclosures and subsequent resales by these agencies have resulted in a net decrease of 28 (4.7%) permits from Alaska Locals.

The cumulative numbers of transfers to and from local permit holders are presented for each fishery in Table 29 and by fishery and year in Appendix E.¹ By the end of 1999, the number of permits held by Alaska locals decreased in 30 fisheries.

Numerically, the greatest decreases in permit numbers have been in the Bristol Bay fisheries (391 permits), the Prince William Sound salmon fisheries (110 permits), the Peninsula/Aleutian fisheries (88 permits), and the hand troll fishery (55 permits). The Bristol Bay fisheries alone accounted for

¹ Note that if there have not been any transfers for a particular permit type, that permit/fishery will not be listed on the tables.

65.9% of the 593 net decrease in the number of permits held by Alaska locals due to transfer. The net local shift in these fisheries was highest in the late 1970s and early 1980s but this shift has been reduced in the 1989-1999 period (Appendix E).

The power troll fishery (93 permits) showed the largest numerical gain in permits to Alaska locals.

The relationship between transfer parties by fishery and year is presented in Table 30. Statewide, survey responses indicate that 63.8% of the transfers from local residents to other resident types during the 1980-1999 period were between people who had no pre-existing relationship (1,507 out of 2,363).² Since 1984 this percentage has ranged from 59.8% to 83.8%.

Transfer acquisition methods are presented in Table 31. From 1980 to 1999, 77.1% of the transfers from Alaska Locals to other resident types were sales (1,822 of 2,363 transfers). Statewide, the majority of all cross-cohort transfers (regardless of resident type) were also sales. Cross-cohort transfers appear more likely to be transfers between people without a pre-existing relationship and therefore are more likely to be sale rather than gift transactions.

Sources of permit financing are shown in Table 32 for 1,822 purchases where non-local buyers acquired locally-held permits. For all fisheries combined, 68.6% of the permit sales throughout 1980-1999 were financed through the personal resources of the transferee. This figure is higher than the amount of self-financing used by only Alaska residents (52.9%) and higher than the overall buyer percentage (58.4%) reported in Table 22.³ However, both tables indicate that since 1980 the use of personal assets to buy permits has increased. Table 32 also shows that DCED loans were used to purchase 11.1% of the permits transferred by Alaska Locals.

² The relationship question in the Transfer Survey form was reworded in October of 1983 from “friend” to “personal friend.” This rewording may be responsible for a portion of the increase in the percentage of “other” responses.

³ Note that Table 22 includes both cross-cohort and intra-cohort permit purchases for each resident type.

* This table includes only those surveys where respondents indicated that they had purchased their permit.

Alaska Local permit holders include both Alaska Rural Local and Alaska Urban local resident types.

APPENDIX A

Decision Rules Used to Designate Urban, Rural, Local and Nonlocal

1. Urban includes all towns with 1990 U.S. Census populations of 2,500 or more.
2. Communities are designated urban even though their populations are under 2,500 if they lie within an "urbanized area." Urbanized areas are defined as all communities and places connected by highway to urban centers with populations of 6,000 or more and lying within a 20-mile radius of the urban center (for cities from 6,000 to 20,000 population) or a 40-mile radius (for cities of more than 20,000). The radius is measured from the center of the city as denoted by the city location point on maps, rather than from the city limits. An exception to the radius rule is that the Anchorage "urbanized area" does not extend north of Knik Arm nor south of Turnagain Arm.

The cities of 6,000 to 20,000 population are Ketchikan, Kenai, Kodiak and Sitka. The cities above 20,000 are Anchorage, Fairbanks and Juneau.

Table 1 presents annual counts of year-end permits held by each urban community split into two groups to show the sensitivity of the urban/rural threshold level. If the threshold level were set at a population of 4,000 people instead of 2,500 then the first group of communities would be classified as rural resulting in an additional 1,436 rural permit holders at year-end 1999.

Local/Nonlocal

1. On the coast, local/nonlocal boundaries are based on Fish and Game salmon management areas. Exceptions include communities which have been within more than one Fish and Game management area as a result of the movement of Fish and Game boundaries since 1975. These communities have been made local to both areas (see below). In addition, Cape Yakataga and Port Heiden are "overlap" areas that can contain more than one assigned permit and management area designation. Residents of these two areas will be local for both relevant overlap areas. Lastly, residences in both Southeast and Yakutat are designated local to the hand and power troll fisheries.

Communities Local to More Than One Alaska Department of Fish and Game Management Area

<u>Community</u>	<u>Local Management Areas</u>
Port Heiden	Bristol Bay/ Peninsula Aleutians
Cape Newenham	Bristol Bay/ Kuskokwim
Cape Yakataga	Prince William Sound/ Yakutat

Communities Local to More Than One Alaska Department of Fish and Game Management Area

<u>Community</u>	<u>Local Management Areas</u>
Cape Romanzof	Kuskokwim/ Lower Yukon
Chevak	Kuskokwim/ Lower Yukon
Hooper Bay	Kuskokwim/ Lower Yukon
Igiak	Kuskokwim/ Lower Yukon
Scammon Bay	Kuskokwim/ Lower Yukon
St. Michael	Lower Yukon/ Norton Sound
Stebbins	Lower Yukon/ Norton Sound

2. The Upper and Lower Yukon and Kuskokwim River fishery areas are based on immediate river drainages. The Lower Yukon area extends up the Yukon River to just above Holy Cross. The Upper Yukon "local" area extends up the Koyukuk tributary as far as Huslia, the Chandalar as far as Venetie and the Tanana to Delta Junction, 30 miles beyond the upper limits of commercial fishing on that river. The Kuskokwim local area extends 30 miles upriver beyond the limit of commercial fishing on that river and includes the Stony River tributary as far as Lime Village and the Holitna River as far as Kasheglok.

3. The Bristol Bay area extends inland up the Nushagak River and includes the entire Tikchik Lake system as well as Lake Iliamna and Lake Clark.

4. The Cook Inlet local area includes all but the eastern edge of the Anchorage Borough. The line dividing the Cook Inlet and Prince William Sound ADF&G regulatory areas is extended inland directly north. That is, the line runs from Cape Fairfield at 148°50'W, north to 61°32'N (just north of Bodenbug Butte and south of Palmer) and thence west to 150°30'W (to the community of Susitna) and thereafter follows, at a little distance inland, the western shore of Cook Inlet, ending at Cape Douglas.

5. The Prince William Sound area extends up the Copper River to the confluence of the Bremner River. Taking in the census subareas of Prince William Sound and Cordova, but not the Copper River subarea. It excludes the interior Copper River as well as the Edgerton, Richardson and Glenn Highway communities.

6. Localness for the Westward Herring Fisheries is based on ADF&G regulatory districts rather than entire management areas. Herring stocks in Western Alaska are managed and permitted specific to these districts. The local definitions for these fisheries are based on the districts as defined in 1993 ADF&G Commercial Herring Fishing Regulations and extend 30 miles beyond those district boundaries. The districts therein are defined as waters bounded by specified coastline features or latitudes, but the localness includes those population centers on the coast within those boundaries as well as within a 30 mile radius extending inland and beyond the northern and southern district boundaries. Because the Nelson Island and Nunivak Island districts overlap with respect to latitude and because pre-limitation permitting combined these fisheries, they will share the same local communities for the purposes of this study.

Comparison of Urban/Rural and Local/Nonlocal Standards in this Report With Those in Dr. Steve Langdon's Permit Transfer Study

Beginning with the 1990 edition of this report, a population of 2,500 has been used in conjunction with 1990 Census figures for the threshold distinguishing urban from rural. This is the same threshold used by Langdon¹ although he used 1978 population estimates obtained from the Alaska Department of Community and Regional Affairs. Towns that differ in urban/rural designations from Langdon's work and this study are:

<u>TOWN</u>	<u>LANGDON</u>	<u>CFEC</u>
Cordova	Urban	Rural
Wrangell	Urban	Rural
Girdwood	Rural	Urban
Nikiski	Rural	Urban
Sterling	Rural	Urban
Unalaska	Rural	Urban

The designation of local fishery areas in this report differs from the version Langdon used in that substantial areas of interior Alaska are declared "nonlocal" to any fishery on the assumption that these areas are not truly economically or traditionally oriented to commercial coastal or river fisheries. Certain offshore islands of the Bering Sea (St. Lawrence, St. George, St. Paul, St. Matthew and Little Diomedes) are also "nonlocal" to any commercial fisheries under limitation.

¹ See Langdon, "Transfer Patterns in Alaska Limited Fisheries," 1980.

* Alaska Local permit holders represent the combination of Alaska Rural Local and Urban Local resident types.

** Non-Local does not include non-residents. It is the summation of Alaska Rural Non-local, Alaska Urban Non-local, and DCED/CFAB resident types.
