CHANGES IN THE DISTRIBUTION OF ALASKA'S COMMERCIAL FISHERIES ENTRY PERMITS, 1975-2006

CFEC Report Number 07-5N

Alaska Commercial Fisheries Entry Commission
8800 Glacier Highway Suite 109
P.O. Box 110302
Juneau, Alaska 99811-0302
(907) 789-6160

ABSTRACT

This report provides detailed information on changes in the distribution of permanent entry permits in Alaska's limited fisheries. From 1975 through 2006, 79 permit types have been issued in 65 fisheries. The report provides both statewide and fishery-specific data on the number of permit transfers, the geographic distribution of permit holders, changes due to permit transfers, changes due to the relocation of permit holders and the year-end 2006 geographic distribution of permit holders.

The report also includes extensive information on the age of permit holders, age differences between transferors and transfer recipients, the incidence of intra-family and business partner transfers, transfer acquisition methods, and financing of permit purchases. The information contained in the report is derived from the Commercial Fisheries Entry Commission's (CFEC) permit and transfer survey files.

The report includes 2 separate documents: an executive summary and the principal report, which is primarily a reference document.

I. INTRODUCTION

I. INTRODUCTION

In 1973, the Alaska State Legislature enacted Alaska's Limited Entry Act (AS 16.43) for commercial fisheries. The act established a new agency, the Commercial Fisheries Entry Commission (CFEC), to administer a program regulating entry into commercial fisheries under state jurisdiction. Limited entry was implemented in most of the salmon fisheries in 1974. By the end of 2006, permanent limited entry permits had been issued in 65 commercial fisheries:[1] 26 salmon fisheries, 19 herring fisheries, 9 crab fisheries, 5 sablefish fisheries, 3 shrimp fisheries and 3 dive fisheries (sea urchin, sea cucumber, and geoduck). In some limited fisheries, more than one type of permit was issued to help contain increases in fishing power. Some permits constrain the amount of gear that can be used and some permits constrain the length of the vessel. In some limited fisheries, non-severable permits were issued that combine permissible gear types and in others that combine harvestable species. To date, a total of 79 permit types have been issued in the 65 limited fisheries.

A legal prerequisite of the Limited Entry Act was that permits could not be locked in the hands of those who were originally issued them (i.e., "initial issuees.").[2] After much study and debate, the legislature chose free transferability as the method for allowing permit holders to enter and exit from the fisheries.

Free transferability allows the transfer of permits from parents to their children, and allows family members to inherit a permit upon the death of a permit holder. It allows persons to enter and exit fisheries at times opportune to them, and eliminates the need for an expensive and time-consuming bureaucratic process to handle permit reallocation. Free transferability facilitates permit exchange and promotes overall efficiency. Many other transfer options were considered but were found lacking with respect to these criteria.

[1] By the end of 2006, maximum number regulations have been adopted for 66 fisheries. No permanent entry permits have been issued in the Prince William Sound sablefish pot gear fishery, and therefore the fishery does not appear in this report. In addition, 2 fisheries are under a vessel limited entry program, and are also not reported herein.

[2] Note that initial issuance refers to the issuance of a new permit whenever it occurred. Because some applicants are difficult to classify under a hardship ranking system, a final determination of their standing may come only after an extensive hearing and adjudicatory process. In other instances, permits have been issued as lawsuits brought against the commission are resolved. Thus, some permits have been issued several years after the main body of permits were issued for a given permit type.

In 1983, the Alaska Supreme Court ruled on the *State of Alaska v. Ostrosky*,[3] which challenged the constitutionality of the Limited Entry Act, particularly the free transferability provisions. The court upheld the constitutionality of both the Act and of free transferability and also affirmed the legislative objectives in adopting the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the Ostrosky appeal in *Ostrosky v. State*.[4]

Despite the benefits of free transferability, many persons remain concerned that permit transfers might result in undesirable consequences with regard to the distribution of permits. There is a concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are local to a limited fishery, thereby eroding the economic base. The legislature has twice ordered studies of transferability options, first upon initial passage of the Act,[5] and again in 1980.[6]

Because of concerns about free transferability, CFEC has produced this report so that the legislature, the administration, and other interested parties will be kept accurately apprised of the facts.

This edition covers the 65 limited fisheries for which permanent permits have been issued in the period 1975 through 2006. It contains detailed information on transfer incidence, the initial geographic distribution of permit holders, changes in the distribution of permits due to permanent transfers of permits and migration of permit holders, and the year-end 2006 geographic distribution of permit holders. Extensive information is also provided on the age distribution of permit holders, age differences between transferors and transfer recipients, rates and characteristics of intra-family and business partner transfers, permit market values, and permit acquisition and financing methods.

II. TRANSFER INCIDENCE

II. TRANSFER INCIDENCE

Statewide Turnover Rates

During the period 1975-2006, 16,357 permanent limited entry permits were issued in 65 limited entry fisheries. However, not all of these permits were available for transfer. AS 16.43.250 requires that CFEC develop hardship ranking systems ("point systems") to allocate permits, and to determine point levels at which a person would experience only minor economic hardship if excluded from an initial permit allocation. Permanent permits issued to persons classified at minor economic hardship levels are nontransferable.

A total of 14,079 transferable permits and 2,278 nontransferable permits have been issued. By the end of 2006 14,533 permits remain, 13,639 transferable and 894 nontransferable. The net reduction of 440 transferable permits is due to the cancellation of 566 transferable permits and the net addition of 126 permits that were converted from nontransferable to transferable status through the CFEC adjudication process. The net reduction of 1,384 nontransferable permits is due to the cancellation of 1,258 nontransferable permits and the net conversion of 126 nontransferable permits to transferable status through the CFEC adjudication process.

During this same time span there were 32,005 permanent permit transfers. Original permit holders transferred 11,127 permits, indicating approximately 79.0% of all transferable permits had changed hands at least once by the end of 2006.

Two types of annual transfer rates are shown in Table 1. The first type is the ratio of the permits transferred for the first time (i.e., from initial issuees) to the number of transferable permits. This ratio would be expected to decline over time if no new permits were issued because each year there would be fewer permits still held by initial issuees. This transfer ratio has declined from 0.08 to 0.01 over the 1975-2006 time period. The average annual ratio of transfers from initial issuees to the sum of annual transferable permit counts is 0.03 for the entire time period.

The second type of annual transfer rate reported in Table 1 is the ratio of transfers to available transferable permits, which provides a measure of the annual turnover rate for transferable permits. This ratio varied between 0.06 and 0.13 over the 1975-2006 time period, and averaged 0.09 for all years combined. As can be seen in Table 1, this transfer ratio dropped below the all-years average in 1989 and has remained relatively low through 2006. The 0.06 ratio in 1999 and again in 2002 is the lowest turnover rate recorded in all years.

Turnover Ratios by Permit Type, 1975-2006

In Table 2, permit types were divided into groups based upon the year(s) in which they were limited. A summary of transfer rates is provided for each group. The first group consists of the original 19 salmon permit types for which permanent permits were first issued in 1975. The second group consists of the 6 Arctic-Yukon-Kuskokwim (AYK) salmon permit types for which permanent permits were first issued in 1976. The remaining limited herring, roe herring, shellfish, dive and sablefish permit types are also grouped by years of limitation. These permit type groupings appear on tables throughout the report.

The sum of annual permit counts represent a summation of the number of transferable permits existing at the end of each year. These rates are comparable to the all-years statewide summary rates presented in Table 1.

Two measures of average annual transfer rates for individual permit types are shown in Table 2. The first transfer rate is calculated by dividing the cumulative total transfers from initial issuees, 1975 to 2006, by the sum of annual transferable permit counts over the same period. The permit types limited in the most recent years have the highest rates of transfers from initial issuees, but this rate is expected to decline over time because each year there will be fewer initial issuees remaining in the permit type.

The second transfer rate is calculated by dividing all permanent transfers over the time period by the sum of annual transferable permit counts over the same period. For the second type of turnover rate (ratio of transfers to the sum of annual transferable permit counts), the transfer rates vary considerably by permit type. The transfer rates for about one-half of the permit types are 0.09 or greater when averaged across all years. Some of the permit types with lower annual average rates are all of the AYK salmon permit types, most of the Westward herring permit types, the Chignik salmon purse seine permit, the Goodnews Bay herring gillnet permit, the Cook Inlet Dungeness pot permit, and the Kodiak Tanner bairdi pot gear permit for vessels up to 120 feet.

The annual transfer rate within a permit type may vary considerably from year to year. This is demonstrated in Appendix B where the number of transferable permits, the number of transfers, and the transfer rates for each year are presented for individual permit types.

TABLE 1. Statewide Transfer Data on Permanent Permits by Year, 1975 – 2006

Years	Sum of Annual Transferable Permits	Total Transfers From Initial Issuees	Ratio	Total Number of Transfers	Ratio
1975 - 2006	375,929	11,127	0.03	32,005	0.09

* 1,930 permits have been cancelled. Except for 106 that were reinstated, these have been excluded from the year of cancellation forward.

** 566 transferable permits have been cancelled and 126 transferable permits have been added through conversion from nontransferable to transferable status through the CFEC adjudication process

*** The number of transfers includes 322 loan foreclosures by the Department of Commerce, Community and Economic Development or by the Commercial Fishing and Agriculture Bank, and 272 subsequent transfers from these entities.

* The sum of annual permit counts is the total number of permits at the end of each year, summed over the entire period.

** The number of transfers includes 322 permit foreclosures and 272 subsequent transfers of these permits.

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

III. GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS AND MIGRATIONS

The effects of permit transfers and migration of permit holders are examined in this portion of the report. Statewide and fishery-specific information are provided.

Classification of Permits

Hardship ranking systems, or "point systems", based upon past participation and economic dependence were developed for each limited entry fishery and used to allocate the original permits. The Limited Entry Act requires CFEC to determine levels within the point systems where persons would experience only "minor economic hardship" if excluded from an initial permit allocation. Persons who receive permanent entry permits and who are ranked at or below the minor economic hardship level receive nontransferable permits, while persons who are ranked above the minor economic hardship level receive transferable permits.

Over all permit types, 16,357 permits have been issued through year-end 2006. 14,079 transferable permits have been issued to persons ranked above the minor economic hardship level (86.1%) and 2,278 nontransferable permits have been issued to persons ranked at or below the minor economic hardship level (13.9%).

In most permit types, a majority of the permanent permits were issued as transferable permits to persons ranked above the minor economic hardship level. In a few fisheries, a higher percentage of nontransferable permits were issued. For example, 310 permanent permits were initially issued in the Southeast shrimp pot fishery; 154 transferable permits (49.7%) were issued to persons ranked above the minor economic hardship level and 156 nontransferable permits (50.3%) were issued to persons ranked at or below the minor economic hardship level (Table 3). Table 3 indicates the distribution of permits among resident types for transferable permits and all permits, both transferable and nontransferable, at initial issuance. Table 4 indicates the distribution of permits among resident types for transferable permits and all permits, at year-end 2006.

Classification of Permit Holders

In order to measure the changes in the distribution of permits, permit holders have been classified into broad categories according to where they reside. Langdon[1] divided permit holders who were residents of Alaska into those who had domiciles that were "local" and those that were

[1] Langdon, S. "Transfer Patterns in Alaskan Limited Fisheries" January 17, 1980.

"nonlocal" to the permit type. He further defined Alaskan domiciles as "rural" or "urban." Non-Alaskans were grouped as a single "nonresident" category. Langdon's conceptual categories are a useful way to examine the geographic distribution of permits. Combinations of Langdon's resident types are used in this report. The resident types are:

ARL: ***Alaska*** resident of a ***Rural*** community which is ***Local*** to the fishery for which the permit applies;

ARN: ***Alaska*** resident of a ***Rural*** community which is ***Nonlocal*** to the fishery for which the permit applies;

AUL: ***Alaska*** resident of an ***Urban*** community which is ***Local*** to the fishery for which the permit applies;[2]

AUN: ***Alaska*** resident of an ***Urban*** community which is ***Nonlocal*** to the fishery for which the permit applies;

NR: ***Nonresident*** of Alaska;

DCCED/CFAB: Signifies permits that have been foreclosed upon by the Department of Commerce, Community and Economic Development (DCCED) or by the Commercial Fishing and Agriculture Bank (CFAB) and have yet to be transferred.

In some cases, ARLs and ARNs will be combined into a "rural" category; AULs and AUNs into an "urban" category; ARLs and AULs into a "local" category; ARNs and AUNs into a "nonlocal" category; and ARLs, ARNs, AULs, and AUNs into an "Alaskan" category.

Decision rules for designating urban/rural and local/nonlocal classifications are described in Appendix A. For Census 2000, the Census Bureau changed its method of classifying areas as rural or urban. The Census Bureau used advances in geographic information systems (GIS) to automate the urban and rural delineation process. The Census Bureau did not automatically recognize previously existing classifications of rural or urban. There was no "grandfathering" of areas that qualified based on the results of earlier censuses. For details on this process, please see Appendix A.

Urban and rural designations in this report are based upon the most recent information from Census 2000. Because editions of this report prior to 2003 used 1990 census criteria, some changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued and held by rural residents.

[2] The Alaska Urban Local category is not applicable for several administrative areas which have no local communities classified as urban. These include the salmon administration areas of Yakutat, Chignik, Bristol Bay, and the Lower Yukon and the herring administrative areas of Bristol Bay, the Lower Yukon, Nelson Island, Nunivak Island and Goodnews Bay.

The local/nonlocal distinction is linked to Commercial Fisheries Entry Commission administrative areas, which are based on regulatory boundaries of the fishery. Some inland communities are considered local to permit types in areas such as the Yukon River and Bristol Bay. A thorough description of local/nonlocal decision rules also can be found in Appendix A.

Before 1978, resident type classifications were based on address information provided to CFEC during the issuance, renewal and transfer of permits. Some nonresident applicants used an Alaska address, so were classified as residents. After 1978, in an effort to improve the accuracy of resident/nonresident data, CFEC renewal and transfer forms included a sworn declaration of residency. In addition, permit holders claiming Alaskan residency were required to provide a valid Alaska address. Before 1982, permit renewal forms included space for only one address. The address listed may have been a temporary mailing address near the fishing grounds. As a result, a number of fishermen could have been misclassified as living in a place that was local to the permit type. Beginning in 1982, permit renewal forms included space for both a permanent and a temporary mailing address. Data suggest the number of fishermen who may have been misclassified is relatively small, although an exact number is unknown. From l982 forward, temporary mailing addresses have not been a major cause of erroneous resident classifications.[3]

For this report, residency of the permit holder was determined by the type of fee paid for the issuance or renewal of the permit, either resident or nonresident. In the event that someone other than the year-end permit holder paid the fee, the residency declaration of the year-end permit holder was used to determine residency.

Geographic Distribution of Initial Issuees

Over all permit types, Alaska residents received 81.7% (13,370 permits) of the initial allocation of permits and nonresidents received 18.3% (2,987 permits) through 2006. Of the 16,357 permits issued, ARLs received more permits than any other resident type (7,557 permits, 46.2%). AULs received 4,257 permits (26.0%) and nonlocal permit holders (ARN and AUN) received 1,556 permits (9.5%).

The percentages of permits issued to the resident types vary widely between individual permit types and groups of permit types. For example, ARLs were issued 41.7% of the 8,288 permits in

[3] The first edition of this report (1983) estimated the number of transfers involving permit holders who used an "in care of" address at 2%. Since then there have been major permit file data corrections which included replacing temporary mailing addresses with permanent addresses.

the group of original 19 salmon permit types, and 80.1% of the 2,215 Arctic-Yukon-Kuskokwim (AYK) permits.

Geographic Distribution of Permit Holders at Year-end 2006

By the end of 2006, the distribution of permits among the resident types had changed to the levels shown in Table 4. Alaska residents held 76.9% (11,180 permits) of all permits and nonresidents held 23.1% (3,353 permits). Fifty permits had been foreclosed upon by DCCED or CFAB and have yet to be transferred, but are included in the totals listed for Alaska residents.

Changes in the distribution of all permits from the time of initial issue to year-end 2006 includes a 27.3% (2,060 permits) decrease in the total number of permits held by ARLs. At year-end 2006, ARLs held 49.2% of all Alaskan resident permits (5,497 out of 11,180) and 37.8% of the total permits (5,497 out of 14,533). Generally, ARLs have experienced the largest percentage decreases of transferable permits in the permit types that have been limited the longest.

The total number of permits held by AULs decreased 17.2% (733 permits) by the end of 2006. The total number of permits held by AUNs increased 47.7% (415 permits), the largest percent change of any residency type. ARNs and nonresidents also increased their holdings of permits: 20.1% for ARNs (138 permits) and 12.3% (366 permits) for nonresidents.

Geographic Changes in the Distribution of Permits Due to Transfer

To examine the geographical changes in permit distribution attributable to transfer activity, transfers have been divided into two groups: 1) transfers between permit holders of the same resident type and 2) transfers between persons of different resident types. Transfers within the same resident type are termed “intra-cohort”, while transfers between different resident types are termed “cross-cohort”. Cross-cohort transfers result in a change in the distribution of permits among the resident types.

A total of 32,005 transfers are organized by cross-cohort and intra-cohort categories in Table 5, and the actual numbers of transfers from one resident type to another are presented by year. The majority of all transfers in each year have been between persons of the same resident type. The annual percentage of intra-cohort transfers was at a high of 69.2% in 1976 and a low of 56.5% in 2004. Generally, the percentage of intra-cohort transfers was higher in the early years, from 1975 to 1981. By the end of 2006, intra-cohort transfers over all years accounted for 62.4% of the total number of transfers.

Information on the intra-cohort and cross-cohort transfers for each permit type, all years combined, is provided in Table 6. With a few exceptions, the majority of transfers within each permit type have been intra-cohort. Note that for Tables 6 and 7, if transfers have not occurred for a particular permit type, the permit type does not appear in the table.

The cumulative net results of cross-cohort transfers to each resident type, by permit type, are shown in Table 7. By year-end 2006, the following changes had occurred in the distribution of transferable permits as a result of cross-cohort transfer activity:

1. Permits held by ARLs decreased in 31 of the listed permit types as the net result of cross-cohort transfer activity, which resulted in a statewide net decrease of 602 ARL permits (8.9% of the 6,787 transferable permits originally issued to ARLs). The Bristol Bay salmon drift and set gillnet permit types have had the largest numerical net decreases due to transfer activity (413 permits combined). This 413 permit decrease is 32.5% of the 1,270 transferable permits originally issued to ARLs in these two permit types.

2. Permits held by ARNs increased by 210 permits due to net transfer activity, a 33.1% increase of the 634 transferable permits issued to this resident type. The largest net increase was in the Prince William Sound salmon drift gillnet permit type (73 permits).

3. Permits held by AULs increased by 246 permits due to net transfer activity (7.8% of the 3,142 transferable permits originally issued to this group). The largest net increases were in the salmon power troll (59 permits), Kodiak salmon seine (57 permits), Kodiak salmon setnet (44), and Southeast salmon seine (43 permits) permit types. In contrast, the number of permits held by AULs decreased in 12 permit types.

4. Permits held by AUNs have increased by 216 permits due to net transfer activity, a 27.3% increase over the 791 transferable permits initially issued to this resident type. The number of transferable permits held by AUNs has increased in 27 permit types, especially Bristol Bay salmon (155 permits), and Prince William Sound salmon (38 permits).

5. The number of permits held by nonresidents decreased by 120 permits statewide through net transfer activity, a 4.4% decrease from the 2,725 transferable permits originally issued to nonresidents. The number of transferable permits decreased in 41 of the permit types due to net transfer activity, especially the salmon power troll (141 permits), Kodiak salmon seine and setnet (76 and 32 permits respectively), Cook Inlet salmon drift gillnet (60 permits), and Prince William Sound salmon drift gillnet (46 permits) permit types.

   In 18 other permit types, the number of permits held by nonresidents increased due to net transfer activity, especially Bristol Bay salmon drift and set gillnet (225 permits), salmon hand troll (39 permits), and Cook Inlet salmon setnet (27 permits).

Geographic Changes in the Distribution of Permits Due to Migration

Other changes in residency patterns of permit distribution occur when permit holders move from one community to another. During the l975-2006 time period there were 10,049 city and/or residence indicator changes that resulted in a resident type reclassification and have been defined as “migrations” for the purposes of this report.

Migrations to and from each resident type for both transferable and nontransferable permits are shown in Table 8. In general, there appears to be considerable movement both to and from each resident type. The net results of migratory activity to each resident type over the entire period are shown by permit type in Table 9. Some recently limited permit types have had no migratory activity, so are not listed in these tables.

The 1975-2006 geographical shifts in the distribution of permits due to migration can be summarized as follows:

1. Statewide, the number of permits held by ARLs decreased by 807 permits as the net result of migration. Migratory activities did not affect all permit types in the same manner, however. There were ARL net decreases in 45 permit types and ARL net increases in 9 others.

   The number of permits held by ARLs decreased primarily in the AYK salmon (244 permits), Bristol Bay salmon setnet (109 permits), power troll (60 permits), hand troll (71 permits), Bristol Bay salmon driftnet (57 permits), and Prince William Sound salmon seine (45 permits), and drift gillnet (40 permits) permit types. Some of the ARL gains through migration were made in the Cook Inlet salmon setnet (31 permits) and drift gillnet (7 permits), Chignik salmon seine (7 permits), and Southeast salmon drift gillnet (14 permits) permit types.

2. The number of permits held by ARNs decreased by 5 as a net result of migration activity. Permit types with the greatest amount of increase were AYK salmon (55 permits) and salmon hand troll (6 permits). The most notable decreases were in the Bristol Bay salmon drift gillnet permit type (27 permits) and Prince William Sound salmon drift gillnet (22 permits).

3. The number of permits held by AULs decreased by 291 as the net result of migration. The decrease was primarily in the Cook Inlet salmon setnet (68 permits), salmon hand troll (72 permits), Cook Inlet drift gillnet (53 permits), and Kodiak salmon seine (56 permits) permit types.

4. The number of permits held by AUNs increased by 321 as the net result of migration. Permits held by AUNs increased by 148 permits in the AYK salmon permit types and 30 permits in the salmon hand troll permit type. However, there were net decreases in 12 permit types, particularly in the herring permit types limited in 1977-78 (20 permits), and Bristol Bay salmon drift gillnet permit type (21 permits).

5. Permit holders moving in and out of Alaska resulted in a net increase of 782 nonresident permits. The nonresident category shows net changes in the number of permits in 56 different permit types, 49 of which indicate net increases. The largest net increases in permits held by nonresidents were in Bristol Bay salmon (171 permits), salmon hand troll (107 permits), Cook Inlet salmon (100 permits), and Kodiak purse seine and setnet salmon (100 permits) permit types. The largest decreases in the number of permits held by nonresidents as the net result of migration occurred in the Southeast salmon drift gillnet (7 permits) and Southeast sea urchin dive (7 permits) fisheries.

Summary of Changes in Permits Held by Resident Type

A yearly summary of the net changes in the distribution of permits by resident type as a result of transfers, migrations and cancellations is provided in Table 10. The cumulative effects of these changes are summarized below:

l. ARLs were issued 7,557 permits, (transferable and nontransferable, Table 3) through year-end 2006, which represented 46.2% of all permits. At year-end 2006, 5,497 (37.8%) of all permits were held by ARLs (Table 4). The decrease of 2,060 permits represents 27.3% of all permits originally issued to this group. Migration accounts for 39.2% of the decrease (807 permits) followed by cancellations (31.6% or 651 permits), and transfer activities (29.2% or 602 permits).

   The number of permits held by ARLs declined in all but one year since 1977. Before 1987, transfers accounted for most of the decline, but since 1987, migrations or cancellations have accounted for most of the decrease.

2. ARNs were initially issued 686 permits (4.2% of all permits). By the end of 2006, the number of permits held by ARNs rose to 824 (5.7% of all permits). The increase of 138 permits represents a 20.1% increase over the number of permits originally issued to this group. The net increase is due to transfer activity (210 permits). Cancellations and migrations reduced the number of ARN-held permits by 67 and 5 permits, respectively.

3. AULs received 4,257 of all permits issued through 2006 (26.0% of all permits). They held 3,524 permits at year-end 2006 (24.2% of all permits), a decrease of 733 permits. Cancellations of permits (688 permits) have been the major factor in this decrease. Most of these cancellations were in the hand troll permit type. Nontransferable permits are normally cancelled when the permit holders dies or does not renew the permit.

   Transfer activities since 1975 have resulted in a net increase of 246 AUL-held permits, while migration has resulted in a net loss of 291 permits to other resident types.

4. AUNs received 870 (5.3%) of all permits issued through 2006. At the end of 2006, the number of permits held by AUNs had risen to 1,285 (8.8% of all permits). The increase of 415 permits represents a 47.7% increase over the number of permits originally issued to this group.

5. Nonresidents received 2,987 of all permits issued through 2006 (18.3% of all permits). By the end of 2006, nonresidents held 3,353 permits (23.1%). The 366 net permit increase represents a 12.3% increase over the number of permits originally issued to this group.

   The overall net change has been most significantly influenced by migration (782 permits) followed by cancellations (296 permits). Net transfer activity has reduced nonresident permit holders by 120 permits. Annually, the net changes in migration and transfers have fluctuated greatly.

Appendix C documents initial issuance, transfer, migration, and cancellations of permits by permit type and by year for each of the resident types. An in-depth analysis of the movements of permits from ARL permit holders and from the Alaska Local permit holders (combined group of ARLs and AULs) are presented in subsequent chapters of this report.

IV. AGE PATTERNS AMONG PERMIT HOLDERS

IV. AGE PATTERNS AMONG PERMIT HOLDERS

A concern of the drafters of the Limited Entry Act was that limited permits would remain accessible to younger Alaskans. This section examines ages of permit holders, transferors, and transferees (transfer recipients) over the lifetime of the limited entry program. Excluded from the data are nontransferable permits and permits which were foreclosed upon by the Department of Commerce, Community and Economic Development (DCCED) or the Commercial Fishing and Agriculture Bank (CFAB).

Mean Age of Permit Holders, Transferees (Transfer Recipients), and Transferors

Annual mean ages for all transferable permit holders, transferors and transfer recipients are shown in Table 11. If no permits were transferred at all, the mean age of permit holders would logically increase by one year each year. However, the mean age actually declined from about 43 in 1975 to 41 in 1978 and remained relatively stable through 1985. In 1986, the mean age of transferable permit holders increased to 41.5 and steadily rose to 48.6 at year-end 2006. There are at least two possible explanations for this increase: 1) fewer transfers have occurred in recent years resulting in a reduction of younger people entering the fisheries, and 2) the average age of transfer recipients has generally increased from a low of 32.5 in 1976 to 38.7 in 2006.

From 1975 through 1984, the statewide annual mean age of transfer recipients was consistently between 32 and 35 years. Beginning in 1985 and continuing through 1990, the annual mean age of transfer recipients rose to between 35 and 36 years. The age of transfer recipients generally increased between 1991 and 2003, reaching a mean age high of 41.1 in 2002 and 2003. The mean age of transfer recipients has declined slightly from 2004 through 2006.

The statewide annual mean age of transferors was highest in 1975 at 51.9 years, shortly after the first limited entry permits were issued. It decreased to 41 years by 1979, and then rose to stay in the range of roughly 43 to 44 years from 1980 to 1990. Between 1990 and 2005, the annual transferor mean age gradually increased to just above 50 years, then dropped slightly by year-end 2006, to 49.4.

Overall, the age difference between transferors and transfer recipients was greatest in the early years of the limited entry program, particularly prior to 1978. From 1984 to 1994 the overall age difference varied little, from 7.3 to 8.7 years. In 2000 and between 2004 and 2006, the age

difference between transferors and transfer recipients was at least 10 years, the highest level since 1983.

Mean Age by Permit Type

Annual mean ages for year-end transferable permit holders, transferors, and transfer recipients in specific permit types are presented in Table 12. At year-end 2006, permit types with the highest mean reported ages of year-end permit holders were the Norton Sound herring beach seine (62.8 years), Upper Yukon salmon gillnet (60.3 years), Southern Southeast sablefish longline (56.3 years), Cook Inlet dungeness pot (56.2 years), and Prince William Sound roe herring seine (56.0 years). The permit types with the lowest mean reported age of year-end permit holders in 2006 were Southeast geoduck dive (41.9), Bristol Bay salmon setnet (42.7), Southeast cucumber dive (43.0), Kuskokwim salmon gillnet (43.6), and Bristol Bay herring spawn on kelp (44.1).

Mean Age by Resident Type

The annual mean ages by resident type for year-end transferable permit holders, transferors, and transfer recipients are presented in Table 13. The highest mean age for year-end transferable permit holders in 2006 was nonresidents (49.5 years) and the lowest was Alaska rural nonlocals (46.6 years).

By year-end 2006, the mean age of transferors varied by approximately 5 years between resident types. The reported mean age of transferors by resident type ranged from 45.1 (AUN) to 50.3 (ARL and AUL) for the 5 resident type categories.

Annual mean ages of transfer recipients gradually increased within each resident type over the 1975 to 2003 time period. Then each resident type saw a drop in transfer recipient age between 2004 and 2006. Alaska urban nonlocals had the highest mean age of transfer recipients (40.3 years), followed by nonresidents (40.2 years). Alaska rural nonlocals had the youngest mean age of transfer recipients (34.8 years).

The annual age class distributions of year-end transferable permit holders are shown in more detail in Table 14. The table also lists the annual percentage each age class represents of all transferable permits held by a particular resident type (percentage of the row total). In recent years, the percentage of permit holders for all resident types in the younger age classes has generally decreased. The decrease is balanced by an increase in the percentage of permit holders

in the 41- to 50-year-old, the 51- to 60-year-old, and over 60-year-old categories. Mean ages for specific permit types by resident type and year are provided in Table 15.

TABLE 11. Mean Ages of Transferable Permit Holders, Transferors, Transferees, and Mean Age Differences Between Transferors and Transferees by Year

Year	Transferable Permits*	Mean Age	Number of Transfers**	Transferor Mean Age***	Transferee Mean Age	Mean Age Difference
1975	6,762	42.7	586	51.9	33.1	-18.7
1976	9,160	41.6	776	45.9	32.5	-13.5

2000	13,384	46.5	928	47.9	37.9	-10.0
2001	13,683	46.9	927	47.9	40.6	-7.3
2002	13,676	47.5	732	48.2	41.1	-7.1
2003	13,585	48.0	889	49.5	41.1	-8.4
2004	13,485	48.2	939	49.9	39.7	-10.2
2005	13,587	48.3	1,094	50.5	39.3	-11.2
2006	13,589	48.6	991	49.4	38.7	-10.7

* The number of transferable permits excludes foreclosed permits. The Department of Commerce, Community and Economic Development and the Commercial Fishing and Agriculture Bank have foreclosed loans for 322 permits and have transferred 272 of those permits. 50 permits remain held by DCCED and CFAB.

** The number of transfers excludes foreclosed permits or transfer surveys with missing birthday information.

*** Mean ages may be based on fewer observations than the number of permits because of missing birthday information.

TABLE 12. Mean Ages of Transferable Permit Holders, Transferors, Transferees, and Mean Age Differences Between Transferors and Transferees by Year and Permit Type, 1975-2006

Permit Type	Year	Number of Permits*	Number of Transfers	Mean Age	Mean Age of Transferors	Mean Age of Transferees	Difference

* The number of transferable permits and the number of transfers exclude foreclosed permits. Mean ages may be based on fewer observations than the number of permits because of missing birthday information.

** Age information is confidential when there are fewer than 4 permits.

TABLE 13. Mean Ages of Transferable Permit Holders, Transferors, and Transferees by Resident Type, 1975-2006*

		Transferable Permits		Transferors		Transferees	
Resident Type	**Year**	**Count**	**Mean Age**	**Count**	**Mean Age**	**Count**	**Mean Age**

V. TRANSFER SURVEY RESULTS

V. TRANSFER SURVEY RESULTS

CFEC has conducted a survey of transfer participants since 1975. The survey collects information on the relationship between transfer parties, whether the transfer was a gift,[1] sale, or trade, and the type of financing used and sale price for permits that are sold. The survey has been the source of information for CFEC permit price estimates, which are used by the Department of Commerce, Community and Economic Development (DCCED) and the Alaska Commercial Fishing and Agriculture Bank (CFAB) for fishing loan purposes.

During the 1975-1979 period, the survey was sent to all transferors and transfer recipients, but its completion was entirely voluntary and anonymous. Because many surveys were not returned, and because those that were returned could not be tied to other CFEC data, their usefulness was somewhat limited. Information from the 1975-1979 transfer surveys is not included in this report, but may be found in the first edition published in 1983.[2]

In 1980 the survey was modified. It was tied to other CFEC data sources, and made mandatory for the transfer recipient to complete. In late 1983 the survey was expanded to include information from the transferor. Transfer survey results from the 1980-2006 time period are presented in the following tables.

Even though the survey was made mandatory in 1980, strict enforcement of this rule did not occur until 1981. There were 139 transfers in 1980 and 15 transfers in 1981 without completed surveys. Note that in every year some transfers occurred for which a transfer survey was not completed. This accounts for the slight differences in the "Totals" columns between Table 1 and the tables in this chapter. The majority of transfers without surveys occur on DCCED or CFAB foreclosed permits. Overall, the surveys represent 98.2% of all transfers since 1980 (26,515 of 27,008 transfers).

Relationships of Transfer Participants

Of the 26,515 transfer surveys received during 1980-2006, 38.6% (10,230 surveys) indicated a transfer between immediate family members or other relatives, and 19.1% (5,066 surveys) indicated a transfer between friends or business partners. Permit exchanges between people who appeared to have no pre-existing relationship accounted for the remaining 42.3% (11,218)

[1] Permits transferred as part of an inheritance are classified as gifts.
[2] CFEC "Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981," February 1983.

transfer surveys (Table 16).[3] Many individual permit types differ from the all years' statewide percentages.

From 1981 to 1988 for all permit types combined, the percentage of transfers between friend/partners decreased, while from 1989-2006 the percentage of transfers between friend/partners has remained relatively constant. The rewording of the "Friend" category on the survey form to "Personal Friend" in October of 1983 may be responsible for part of this decrease and may also account for the relatively sharp increase in the number of transfers between persons in the "Other" category in 1984.

When transfers are organized by the resident type of the transfer recipient, considerable variation in relationship patterns is evident among resident types (Table 17). Over half of the transfers to Alaska rural locals, for all years combined, were from immediate family members and relatives (54.8% or 4,555 transfers), which is almost double that of some other resident types. In the remaining resident types, the "Other" category predominated.

Permit Acquisition Method: Gift, Sale, Trade, and Other

Under the Limited Entry Act's terms of free transferability, permits may be sold, traded, given away or inherited, thus enabling new participants to enter a fishery. During the 1980 to 2006 time period, transfer survey responses indicated that 59.9% of transfers for all permit types were sales (15,882 transfers), 34.9% were gifts (9,249 transfers), and 1.5% were trades (404 transfers). The remaining 978 transfers in the "Other" category comprised 3.7% of the survey responses (Table 18).

The incidence of gift transactions has accounted for roughly 30 to 40% of all transfers since 1980. Because gifts accounted for only 21.5% of all transfer survey responses in the 1975 to 1979 time period,[4] it has been suggested that the 1980 to 2006 percentage increase may be a result of efforts to enforce the prohibition on leasing permits. Therefore, some of the "Gift" responses may actually represent lease arrangements or carry reciprocal expectations.

Individual permit types often differ considerably from the statewide averages. While sale transactions predominated in most fisheries, gifts represented at least half of the 1980 to 2006 survey responses in 13 fisheries.

[3] If no transfers have occurred in a particular permit type, that permit type will not be shown on the table.
[4] CFEC "Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981", February 1983.

A breakdown of acquisition methods by the resident type of the transfer recipient is presented in Table 19. Since 1980, 49.3% of the Alaska rural locals who have obtained permits through transfer have received them as gifts. Sales have accounted for roughly 65% to 67% of the transfers to each of the other resident types over the time period.

Permit Prices

In Table 20, mean and median permit prices are given by permit type and year for permit sales during the period 1980 through 2006. Surveys that indicated permit sale prices of less than $500 have been excluded from the computations.[5] To ensure confidentiality, price statistics are not computed for permit types with less than 4 sales transactions per year; also, no value is reported for a permit if there were no sales transactions for that permit in a year. All of the prices are in nominal dollars, which do not reflect adjustments for general price inflation.

Permit prices vary for the same gear type used in different areas of the state (Table 20). For example, the median price of salmon drift gillnet permits varied in 2006 from $28,000 (Cook Inlet) to $76,000 (Alaska Peninsula).

The longest and most complete information on permit prices are in the salmon permit types. Prices in these permit types tended to increase until around 1990, then fall from 1991 to 2002. There has been a slight rebound in salmon permit prices between 2003 and 2006.

There has been a dramatic decrease in values for some permits. For example, the PWS salmon seine permit type fell from a median of $250,000 in 1990 to $14,000 in 2004. Alaska Peninsula salmon drift permits fell from a median of $400,000 in 1993 to $24,000 in 2003.

Financing of Permit Purchases

Transfer survey information on sources of financing used for 15,882 permit purchases is presented by permit type and year in Table 21. Beginning in 1990, additional data have been utilized from surveys in which more than one finance method was indicated.

Finance source data from 1980-2006 have been re-evaluated in the following manner:

1. Survey respondents may mark “Other” on the survey form if they feel their source of financing does not fit into the categories of personal resources, DCCED loan, CFAB loan, other bank loans, or loans from the transferor or a processor. A review of the comments associated with the

[5] Permit price estimates produced for this report may differ from the CFEC estimated monthly permit value report due to the more stringent criteria used for exclusion for the monthly report.

surveys marked "Other" revealed that a large number of these involved unique methods of self-financing or loans from relatives or friends. Because of the strong association of the "Other" financing with that of the personal resources financing, those responses were combined and classified under a "Self/Other" category thus eliminating the nondescriptive "Other" category for the purposes of this report.

2. For surveys where 2 finance sources were indicated, but one of those sources was "Self/Other," the finance source reported in tables of this study is that of the alternative finance source (other than the "Self/Other" category). The self-financing associated with permits financed by multiple methods is primarily in the form of a down payment or interim financing. The "Self/Other" category is intended to be representative of permit purchases that are primarily financed by personal resources rather than simply purchases involving a down payment. (Many financing methods involve a down payment.)

3. Surveys involving three finance sources as well as the remainder of the two finance source surveys (i.e., those surveys that did not indicate "Self/Other") are reported under the category of "Combination" financing in subsequent tables of this study.

Statewide, self-financing of permits has been the predominant method of finance, accounting for 63.9% of all purchases during the 1980-2006 time period (10,156 permits). The next most important source of financing has been the Department of Commerce, Community and Economic Development's loan program with 16.1% (2,553 permits).[6] Transferors financed 7.1% (1,130 permits), banks and other private lending institutions financed 6.4% (1,023 permits), the Commercial Fishing and Agriculture Bank financed 2.5% (390 permits), and processors financed 1.2% (185 permits) of the permit purchases. The remaining 445 (2.8%) survey responses, which indicated multiple finance sources, were placed in the combination category.

Both the percentage and the number of permit sales financed by the transferor have declined significantly since 1980 (Table 21). In 1980, 142 transfers were financed by the seller (27.7%); in 2006 only one transfer was seller-financed (0.02%). The percentage of self-financed purchases has tended to increase over the time period and the percentage of sales financed by DCCED has declined since the high in 1982. Self-financed transfers were at an all-time high in 2005. Perhaps lower permit values enabled more persons to finance the purchase of permits themselves.

Sources of permit financing by resident type and year derived from the transfer survey are provided in Table 22. The most commonly used methods of financing for the 10,886 permits purchased by Alaskan residents were the personal resources (Self/Other) of the transferee (58.4% or 6,355 transfers) and DCCED authorized loans (23.3% or 2,532 sales). Urban Alaska residents have received 52.9% (1,339) of the 2,532 DCCED loans issued to Alaskans. Nonresidents have

[6] The percentage of state-financed permits increases to 23.5% when only the purchases by Alaskan residents are considered (Table 22).

the highest rates of self-financing (76.1%) and of financing through the transferor (10.1%) of the permit.

Foreclosures on Permit Loans

Table 23 shows the number of permit loans foreclosed upon by DCCED or CFAB over the 1982 to 2006 time period. By law, these are the only 2 lending entities that can accept an entry permit as collateral on a loan. The number of foreclosures remained fairly constant in the 1980s, and then dropped following 1988. The fewest loan foreclosures occurred in 1990 (2 foreclosures). The number of permits transferred to DCCED or CFAB began increasing in 1999 and spiked dramatically in 2002 with 45 foreclosures. The number of foreclosures has decreased each year since 2002, and in 2006 was similar to the number of foreclosures seen each year in the 1980s.

Over the 1982 through 2006 period, the number of foreclosed permits was greatest for Alaska rural locals with 38.2% of the foreclosures (123 permits), followed by Alaska urban locals at 25.8% (83 permits). Alaska urban nonlocals and Alaska rural nonlocals had fewer foreclosures with 16.1% and 11.2%, respectively (52 and 36 permits). Nonresidents had the fewest foreclosures (8.7%, 28 permits). Nonresidents are not eligible for DCCED or CFAB loans, so those represented here were likely residents when they received the loan and subsequently changed residency status due to migration prior to foreclosure.

	2006	4	$1,875	$2,000

* Because permit prices of less than $500 are excluded, average permit values in this table will vary somewhat from those reported in CFEC Annual Reports, which use different exclusionary criteria.

Transfer survey information for Department of Commerce, Community and Economic Development foreclosures are also excluded, however transfers from the Department of Commerce, Community and Economic Development to other Alaskans are included.

** All instances where there are less than 4 transactions are masked due to confidentiality statutes.

ARL - Alaska Rural Local
ARN – Alaska Rural Nonlocal
AUL – Alaska Urban Local
AUN – Alaska Urban Nonlocal
NR – Nonresident

* The Department of Commerce, Community and Economic Development or the Commercial Fishing and Agriculture Bank have transferred 272 of these permits. By the end of year 2006, 50 permits were still held by DCCED/CFAB.

VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

VI. PERMIT TRANSFERS FROM ALASKA RURAL LOCALS TO OTHER RESIDENT TYPES

The long-term effects of limited entry on rural coastal fishing communities have been of considerable interest to the legislature, the administration, and the public, especially the degree to which limited entry permits have been transferred away from rural fishing communities. From 1975 through 2006, over two-thirds (67.7%) of the 10,465 transfers made by Alaska rural locals have been to other Alaska rural locals. This percentage has been relatively consistent, ranging from a low of 62.2% in 1982 to a high of 74.8% in 1999 (Table 5). The remaining 32.3% (3,375) of the transfers since 1975 have been to other resident types (cross-cohort transfers). This section will present information regarding only the cross-cohort transfers from Alaska rural local residents (ARLs).

Transfer Activity Away From Alaska Rural Locals

In each year since 1997, there has been a net increase in the number of permits held by Alaska rural locals as a result of transfer activity. In many earlier years, ARLs transferred more permits to other resident types than other resident types have transferred to them, resulting in a net decrease in ARL-held permits (Table 24). Through 2006, this cross-cohort transfer activity has resulted in a net decrease of 602 transferable permits held by ARLs. Each of the other resident types show a net increase of transferable permits through their transfer activity with ARLs. The net increases were as follows: permits held by Alaska urban nonlocals increased 214 permits; permits held by nonresidents increased 177 permits; permits held by Alaska rural nonlocals increased 80 permits; and permits held by Alaska urban locals increased 89 permits. Note that permits held by each of the resident types may have increased or decreased in exchanges with resident types besides ARLs (Table 5).

From 1976 through 1989, net shifts of permits away from ARLs due to transfer activity ranged from 10 to 94 permits per year. The annual net decreases have generally been less since the late-1980s. ARL-held permits have increased in each year between 1997 and 2006 as the net result of transfer. In 2000 transfer activity resulted in a net increase of 49 permits for ARLs, the largest increase over the 1975-2006 period.

Net transfer activity of ARL permits is presented in Table 25 for each permit type for all years combined. Similar data are presented in Appendix D by permit type and year.[1] The Bristol Bay

[1] If there have not been any transfers of a particular permit type, that permit/fishery will not be listed on the tables.

drift and set gillnet permit types have had the largest net decreases in ARL-held permits due to transfer activity (250 and 163 permits, respectively).

While the Bristol Bay permit types have had the highest numerical decreases in the number of permits held by ARLs, other permit types have had larger proportional decreases. There are 5 permit types (other than Bristol Bay permit types) with more than 4 permits issued to ARLs that indicate net decreases greater than 25%. These are the Southeast Alaska salmon purse seine, Prince William Sound salmon setnet, Peninsula/Aleutian salmon seine, Peninsula/Aleutian salmon drift gillnet, and Southeast Alaska red, blue, brown (all) king and Tanner pot gear permit types. Transfers to the DCCED or CFAB through loan foreclosures and subsequent resale by these agencies are responsible for a net decrease of 42 ARL permits. The original 19 salmon fisheries limited in 1975 account for a net decrease of 40 ARL permits through transfer to DCCED or CFAB. A net increase in ARL permit holdings due to resale from DCCED or CFAB are seen in 5 of the original 19 salmon fisheries limited in 1975, the Cook Inlet and Prince William Sound herring seine fisheries, the Prince William Sound herring spawn on kelp pound fishery, and the 150 pot Southeast Alaska Dungeness crab fishery.

Table 26 provides information concerning the relationships between transfer parties for 2,663 ARL cross-cohort transfers that occurred over the 1980-2006 time period for which there were transfer surveys. The information comes from the CFEC transfer survey. As might be expected, most (62.3%) cross-cohort transfers of ARL-held permits were between persons who had no previous relationship.[2]

Permit Financing Methods

The methods used to acquire permits through transfers from ARLs to other resident types for the 1980-2006 period are presented in Table 27. Most (77.0%) of these cross-cohort transfers were sales (2,051 of 2,663) but considerable variation occurs across all limited entry fisheries. Other acquisition methods in the CFEC transfer survey include gift, trade, and other.

Transfer survey information on financing methods used in permit sales from ARLs to other resident types is provided in Table 28 by permit type and year. The major source of financing has been the personal resources of the buyer (66.7%). The percentage of each source of financing varies considerably among the fisheries, however.

[2] The relationship question in the Transfer Survey form was reworded in October 1983 from “friend” to “personal friend.” This rewording may be responsible for part of the increase in the percentage of “other” responses after 1983.

The survey information also indicates that since 1984 there has been a sharp decrease in the number of sales of ARL-held permits financed by the transferor. There have not been any ARL-held permits financed by the transferor in the last 11 years.

VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO OTHER RESIDENT TYPES

VII. PERMIT TRANSFERS FROM ALASKA LOCALS TO OTHER RESIDENT TYPES

Local Alaskan permits, which are the combined permits from Alaska rural local (ARL) and Alaska urban local (AUL) resident types, are the focus of this section. Alaska local permits are defined as those permits held by persons who reside in the area near a limited fishery. Since 1975, 79.0% (13,971 transfers) of all transfers from local Alaskans were made to other local Alaskans. The remaining 21.0% (3,722 transfers) were made to other resident types (Table 5). Tables in this chapter provide information on the cross-cohort transfers between Alaska local permit holders and other resident types. They are similar to tables in the previous section on Alaska rural locals.

Transfer Activity Away From Alaska Locals

Over the 1975-2006 time period Alaskan locals transferred 3,722 permits to other resident types. Alaskan locals received 3,366 permits from other resident types, which resulted in a net decrease of 356 locally held permits. In every year between 1977 and 1996, the number of permits held by Alaska locals declined as a result of transfer activities with the nonresident and nonlocal resident types. Total net decreases were greatest in the years 1979 through 1986. Since 1997 the number of permits held by Alaska locals has increased each year as the net result of permit transfer. The largest increase was in 2000, when the number of permits held by Alaskan locals increased by 68 permits.

In the 1975 to 2006 time period, the net increases within the other resident types due to transfer activity with Alaska locals were 202 permits held by Alaska urban nonlocals (56.7%), 12 permits held by nonresidents (3.4%) and 90 permits held by Alaska rural nonlocals (25.3%). Transfers to the DCCED or CFAB through loan foreclosures and subsequent resale by these agencies are responsible for net decrease of 52 (14.6%) Alaska local permits.

The cumulative numbers of transfers to and from Alaska local permit holders are presented for each permit type in Table 30, and by permit type and year in Appendix E.[1] By the end of 2006, transfer activity resulted in a net decrease of permits held by Alaska locals in 26 permit types and net increases to Alaska locals in 34 permit types.

[1] Note that if there have not been any transfers for a particular permit type, that permit type will not be listed on the tables.

The greatest decreases in the number of permits held by Alaska locals have been in the Bristol Bay salmon permit types (413 permits), the Prince William Sound salmon permit types (91 permits), the Peninsula/Aleutian salmon permit types (84 permits), and the salmon hand troll permit type (45 permits). The net local shift in the Bristol Bay salmon permit types was highest in the late 1970s and early 1980s, but this shift has been reduced in the 1989-2006 period for the Bristol Bay salmon drift and setnet fisheries. In fact, from 2000 through 2003, permits held by Alaska locals increased each year in the Bristol Bay salmon setnet fishery as the net result of permit transfer. (Appendix E).

The power troll permit type showed the largest increase (134 permits) in number of permits to Alaska locals.

The relationship between transfer parties by permit type and year is presented in Table 31. Statewide, 63.4% of the survey responses indicating transfers from Alaska local residents to other resident types during the 1980-2006 period were between people who had no pre-existing relationship (1,882 out of 2,969).[2]

Permit Financing Methods

Transfer acquisition methods are presented in Table 32. From 1980 to 2006, 75.8% of the transfers from Alaska locals to other resident types recorded on surveys were sales (2,251 of 2,969 transfers). Cross-cohort transfers appear more likely to be transfers between people without a pre-existing relationship and therefore are more likely to be sale rather than gift transactions.

Sources of permit financing are shown in Table 33 for 2,251 purchases where nonlocal buyers acquired permits from Alaska locals. For all permit types combined, 72.6% of the permit sales from 1980 to 2006 were financed through the personal resources of the transfer recipient. This figure is higher than the amount of self-financing by transfer recipients over all resident types (63.9%), reported in Table 22.[3] However, both tables indicate that since 1980 the use of personal assets to buy permits has increased.

[2] The relationship question in the Transfer Survey form was reworded in October of 1983 from "friend" to "personal friend." This rewording may be responsible for a portion of the increase in the percentage of "other" responses.
[3] Note that Table 22 includes both cross-cohort and intra-cohort permit purchases for each resident type.

* This table includes only those surveys where respondents indicated that they had purchased their permit. Alaska Local permit holders include both Alaska Rural Local and Alaska Urban Local resident types.

APPENDIX A.

DECISION RULES USED TO DESIGNATE URBAN, RURAL, LOCAL, AND NONLOCAL

APPENDIX A. DECISION RULES USED TO DESIGNATE URBAN, RURAL, LOCAL, AND NONLOCAL

Urban and rural designations are based upon the most recent information from Census 2000. Because previous editions of this report used 1990 census criteria, some changes have occurred in the rural/urban designations. In general, there are now more Alaska places designated as rural, and consequently more permits issued and held by rural residents.

For Census 2000, the Census Bureau significantly changed its method of classifying areas as rural or urban. The Census Bureau did not automatically recognize previously existing classifications of rural or urban. There was no "grandfathering" of areas that qualified based on the results of earlier censuses. The Census Bureau used advances in geographic information systems to automate the urban and rural delineation process.

Urban and Rural Classification

For Census 2000, the Census Bureau classifies as "urban" all territory, population, and housing units located within an urbanized area or an urban cluster. It delineates these boundaries to encompass densely settled territory, which consists of:

1. Core census block groups or blocks that have a population density of at least 1,000 people per square mile and
2. Surrounding census blocks that have an overall density of at least 500 people per square mile

The Census Bureau's classification of "rural" consists of all territory, population, and housing units located outside of urbanized areas or urban clusters. Geographic entities, such as census tracts, counties, metropolitan areas, and the territory outside metropolitan areas, often are "split" between urban and rural territory, and the population and housing units they contain often are partly classified as urban and partly classified as rural.

Local/Nonlocal

1. On the coast, local/nonlocal boundaries are linked to Commercial Fisheries Entry Commission administrative areas which are based on Fish and Game salmon management areas. Exceptions include communities that have been within more than one Fish and Game management area as a result of the movement of Fish and Game boundaries since 1975. These communities have been made local to both areas (see below). In addition, Cape Yakataga and Port Heiden are "overlap" areas that can contain

more than one assigned permit and management area designation. Residents of these two areas will be local for both relevant overlap areas. Lastly, residences in both Southeast and Yakutat are designated local to the hand and power troll fisheries.

The local/nonlocal distinction is linked to Commercial Fisheries Entry Commission administrative areas that are based on regulatory boundaries of the fishery. Some inland communities are considered local to fisheries in areas such as the Yukon River and Bristol Bay.

Communities Local to More Than One Alaska Department of Fish and Game Management Area

Community	Local Management Areas
Port Heiden	Bristol Bay/ Peninsula/ Aleutians
Cape Newenham	Bristol Bay/Kuskokwim
Cape Romanzof	Kuskokwim/ Lower Yukon
Chevak	Kuskokwim/ Lower Yukon
Hooper Bay	Kuskokwim/ Lower Yukon
Igiak	Kuskokwim/ Lower Yukon
Scammon Bay	Kuskokwim/ Lower Yukon
Aguikchuk	Kuskokwim/Nelson Island/Nunivak Island
Anogok	Kuskokwim/Nelson Island/Nunivak Island
Chefornak	Kuskokwim/Nelson Island/Nunivak Island
Inger	Kuskokwim/Nelson Island/Nunivak Island
Itulilik	Kuskokwim/Nelson Island/Nunivak Island
Kipnuk	Kuskokwim/Nelson Island/Nunivak Island
Mekoryuk	Kuskokwim/Nelson Island/Nunivak Island
Nash Harbor	Kuskokwim/Nelson Island/Nunivak Island
Nelson Island	Kuskokwim/Nelson Island/Nunivak Island
Newtok	Kuskokwim/Nelson Island/Nunivak Island
Nightmute	Kuskokwim/Nelson Island/Nunivak Island
Toksook Bay	Kuskokwim/Nelson Island/Nunivak Island
Tununak	Kuskokwim/Nelson Island/Nunivak Island
Cape Yakataga	Prince William Sound/ Yakutat
Pikmiktalik	Lower Yukon/Norton Sound
St. Michael	Lower Yukon/ Norton Sound
Stebbins	Lower Yukon/ Norton Sound

2. The Upper and Lower Yukon and Kuskokwim River fishery areas are based on immediate river drainages. The Lower Yukon area extends up the Yukon River to just above Holy Cross. The Upper Yukon "local" area extends up the Koyukuk tributary as far as Huslia, the Chandalar as far as Venetie and the Tanana to Delta Junction, 30 miles beyond the upper limits of commercial fishing on that river. The Kuskokwim local area extends 30 miles upriver beyond the limit of commercial fishing on that river and includes the Stony River tributary as far as Lime Village and the Holitna River as far as Kasheglok.

3. The Bristol Bay area extends inland up the Nushagak River and includes the entire Tikchik Lake system as well as Lake Iliamna and Lake Clark.

4. The Cook Inlet local area includes all but the eastern edge of the Anchorage Borough. The line dividing the Cook Inlet and Prince William Sound ADF&G regulatory areas is extended inland directly north. That is, the line runs from Cape Fairfield at 148°50'W, north to 61°32'N (just north of Bodenburg Butte and south of Palmer) and then west to

150°30'W (to the community of Susitna) and thereafter follows, at a little distance inland, the western shore of Cook Inlet, ending at Cape Douglas.

5. The Prince William Sound area extends up the Copper River to the confluence of the Bremner River. Taking in the census subareas of Prince William Sound and Cordova, but not the Copper River subarea. It excludes the interior Copper River as well as the Edgerton, Richardson and Glenn Highway communities.

6. Local/Nonlocal boundaries for the Westward Herring Fisheries are based on ADF&G regulatory districts rather than entire management areas. Herring stocks in Western Alaska are managed and permitted specific to these districts. The local definitions for these fisheries are based on the districts as defined in 1993 ADF&G Commercial Herring Fishing Regulations and extend 30 miles beyond those district boundaries. The districts therein are defined as waters bounded by specified coastline features or latitudes. The local/nonlocal definition includes population centers on the coast within those boundaries as well as within a 30-mile radius extending inland and beyond the northern and southern district boundaries. Because the Nelson Island and Nunivak Island districts overlap with respect to latitude and because pre-limitation permitting combined these fisheries, they will share the same local communities for the purposes of this study.

Comparison of Local/Nonlocal and Urban/Rural Standards in this Report With Those in Dr. Steve Langdon's Permit Transfer Study.

The designation of local fishery areas in this report differs from the version Langdon[1] used in that substantial areas of interior Alaska are declared "nonlocal" to any fishery on the assumption that these areas are not truly economically or traditionally oriented to commercial coastal or river fisheries. Certain offshore islands of the Bering Sea (St. Lawrence, St. George, St. Paul, St. Matthew and Little Diomede) are also "nonlocal" to any commercial fisheries under limitation.

Beginning with the 1990 edition of this report, a population of 2,500 has been used in conjunction with 1990 Census figures for the threshold distinguishing urban from rural. Langdon used a threshold of 2,000 and 1978 population estimates obtained from the Alaska Department of Commerce, Community and Economic Development.

[1] See Langdon, "Transfer Patterns in Alaska Limited Fisheries," 1980.

The following tables show those towns that are classified as Rural and Urban in Census 2000.

Rural in 2000, Urban in 1990				
Adak	Fritz Creek	Nikishka	Ridgeway	Sterling
Chatanika	Homer	Nikiski	Salamatof	Two Rivers
Cleary Summit	Kalifonsky	Pedro Dome	Salcha	Valdez
Ester	Murphy Dome	Pleasant Valley	Seward	Womens Bay
Fox				

Rural in 2000, Not Classified in 1990				
Alcan Border	Chulloonawick	Gateway	Mentasta Lake	Red Dog Mine

APPENDIX E. Cross-Cohort Transfers of Alaska Local Permits by Permit Type and Year, 1975-2006

Permit Type	Year	From Alaska Local*	To Alaska Local*	Alaska Local Shift	Net Shift in Resident Type Due to Transfer Activities with Alaska Local Permit Holders				Net Nonlocal Shift**
					ARN	AUN	NR	DCCED CFAB	
Norton Sound Herring Gillnet	2006	0	2	2	0	0	-2	0	0
(cont'd)		34	8	-26	13	3	10	0	16
Overall Total		3,722	3,366	-356	90	202	12	52	344

* Alaska Local permit holders represent the combination of Alaska Rural Local and Urban Local resident types.

** Nonlocal does not include Nonresidents. It is the summation of Alaska Rural Nonlocal, Alaska Urban Nonlocal, and Department of Commerce, Community and Economic Development and Commercial Fishing and Agriculture Bank (DCCED/CFAB) resident types
