## INTRODUCTION TO THE ALASKA MARINE HIGHWAY SYSTEM

### Description of the Alaska Marine Highway System

The Alaska Marine Highway System (AMHS) serves Alaskan communities by transporting passengers and vehicles between coastal communities. This service helps meet the social, educational, health and economic needs of Alaskans.

AMHS provides year-round scheduled ferry service throughout Southeast and Southwest Alaska, extending south to Prince Rupert, British Columbia and Bellingham, Washington. The system connects communities with each other, with regional centers, and with the continental road system. It is an integral part of Alaska's highway system, reaching many communities that would otherwise be effectively cut off from the rest of the state and nation. The AMHS also provides a coastal transportation alternative between Anchorage and the "Lower 48" states versus driving the Alaska Highway.

The AMHS is designed to provide basic transportation services to these communities—transportation that allows community access to health services, commodities, legal services, government services, and social services; transportation that meets the social needs of isolated communities; and transportation that provides a base for economic development.

**Service and Amenities:** AMHS service is divided into two major systems: the Southeast System (from Bellingham north to Yakutat) and the Southwest System (from Cordova west to Unalaska/Dutch Harbor). The AMHS fleet consists of eleven vessels; seven operate in the Southeast System and four operate in the Southwest System. The vessel added in 2005 is the M/V Chenega, the fleet's second fast ferry which primarily serves communities in Prince William Sound. All eleven vessels are designed to carry passengers and vehicles ranging in size from motorcycles to large freight container vans.

Trips on the AMHS can last several hours or several days, so passenger services are an important aspect of the State's transportation service. Most vessels provide food service, shower and restroom facilities, observation lounges, and reclining lounges. The larger vessels provide play areas for children. Six vessels have stateroom accommodations for overnight travel, or for passengers who want a space they can call their own while traveling. The AMHS also offers special interest programs on-board its vessels, including naturalist interpreter programs and Alaskan culture programs.

**Freight Transport:** One regular use of the AMHS is the year-round shipment of container vans. These vans transport time-sensitive cargo such as fresh vegetables, meat, and dairy products from Bellingham and regional Alaskan centers to communities served by the system.

Local restaurants, grocery stores, individuals, and food distribution businesses have established delivery schedules with the AMHS to ensure regular and continuous delivery of perishable goods. Shipping perishable supplies on AMHS is more cost-effective than air freight, and in many cases ensures delivery to communities on a more frequent basis than commercial barge and freight lines. Vans are also used to move fresh Alaska fish and seafood to markets, and to transport U.S. mail and household goods.

**Planned service reductions:** During the fall, winter and spring months, all vessels are scheduled for annual maintenance, which normally requires six weeks minimum per ship. This results in reduced service. Major projects to refurbish the vessels and to keep them in compliance with SOLAS (Safety of Life at Sea) requirements also keep vessels out of service. Vessels are put into lay-up during periods of low traffic demand, or as a means to reduce operating costs. During 2005, at some point, all vessels were out of service for maintenance, project work, or lay-up status (see the 2005 *Operating Plan*).

### Southwest Alaska Routes

The Southwest System serves Prince William Sound, Kodiak Island, the Alaska Peninsula, and the Aleutian Islands. The M/V Tustumena provides regular service between Kodiak, Port Lions, Seldovia, Homer and Seward. Approximately seven times each year, between April and October, the M/V Tustumena travels out the Aleutian chain to Unalaska/Dutch Harbor, stopping at Chignik, Sand Point, King Cove, False Pass, Akutan and Cold Bay en route. This trip is not made in the winter because of adverse weather conditions.

In 2005 service in Prince William Sound to Valdez, Cordova and Whittier was provided primarily by the M/V Aurora with supplemental service from the M/V Kennicott, M/V Tustumena and M/V Chenega. AMHS also provided forty-four stops in the village of Tatitlek and thirty-five stops in Chenega Bay.

Tourists comprise a high percentage of the Prince William Sound traffic in the summer, especially between Valdez and Whittier. In the winter months, when traffic demand is significantly reduced, and weather conditions worsen, service is typically suspended to Whittier and reduced between Valdez and Cordova.

The southwest system connects with the continental road system at Valdez, Homer, Seward, and Whittier. In 2005 AMHS ceased operations in Seward, making Whittier the main access community to South Central Alaska.

## Map of Southwest Alaska Ferry Routes

### Southeast Alaska Routes

The Southeast AMHS route system is divided into two subsystems: the mainline routes and the feeder routes. The mainline routes carry a high percentage of tourists in the summer, and provide service between Bellingham, Washington or Prince Rupert, British Columbia and Skagway, Alaska with stops in Ketchikan, Wrangell, Petersburg, Sitka, Juneau, and Haines.

During 2005, the five largest AMHS vessels were used on the Southeast mainline routes. These were the M/V Columbia, M/V Kennicott, M/V Malaspina, M/V Matanuska, and M/V Taku. Daily service was provided on the North Lynn Canal route during the peak summer season. This route provides round-trip service between Juneau, Haines and Skagway.

The feeder routes connect the smaller communities of Southeast Alaska with each other and with the Southeast Alaska mainline communities (Ketchikan, Petersburg, Wrangell, Sitka, Juneau, Haines and Skagway) that serve as regional centers for commerce, government, health services, and/or connections to other transportation systems. The feeder routes serve primarily local residents, and include Angoon, Hoonah, Kake, Metlakatla, Pelican, and Tenakee.

In 2005, there were two AMHS vessels that provided service on the feeder routes supplemented by contract vessels on an as-needed-basis. These were the M/V Aurora, when in the Southeast, the M/V LeConte, the M/V Fairweather and the M/V Lituya. The M/V Lituya is dedicated to providing shuttle service between Ketchikan and Metlakatla.

The Southeast System connects with the continental road system at Bellingham, Washington; Prince Rupert, British Columbia; Haines, Alaska; and Skagway, Alaska.

### Cross-Gulf Service

When the M/V Kennicott joined the fleet in summer 1998, a vessel certified to operate in open waters, it enabled the expansion of ferry service to include regular cross-gulf sailings. Also known as "inter-tie trips", these sailings connect Southeastern Alaska with South-central and Southwest regions of the state.

Many cross-gulf trips include a stop at the port of Yakutat, a community that is unique in that it is served only on a cross-gulf route. During 2005, the AMHS provided Yakutat with thirty-four port calls.

## Comparisons to Previous Years

Care must be taken when comparing the traffic data to 1997. A fishermen's blockade of the M/V Malaspina on July 19, 1997 resulted in a 138-day suspension of service to the Canadian port of Prince Rupert. Limited service was restored Dec. 4, with one trip per week by the M/V Aurora. The disruption had a major impact on AMHS traffic.

In January 2002, AMHS discontinued regular service to Hollis when the Inter-Island Ferry Authority's M/V Prince of Wales began service between Ketchikan and Hollis. The impact of discontinuing regular Hollis service can be seen on pages 17 through 40 when comparing previous years for Hollis and Ketchikan. Embarkations in 2001 associated with these two city pairs were 33,572 passengers (10.5% of all AMHS embarkations) and 20,297 vehicles (21.6% of all AMHS embarkations).

While AMHS does not officially serve Hollis any longer, backup support for the Inter-Island Ferry Authority is provided as needed. In 2005, our backup support consisted of transporting 148 passengers to or from Hollis and 42 vehicles.

Prior to 2003, Yakutat traffic was included in the Southwest Region. From 2003 forward, Yakutat traffic has been reported in the Southeast Region.

## 2000 to 2005 Traffic Data Sources

For the year 2000 through 2005 reports, counts are of tickets that were issued prior to the sailings. This substitution should not affect the traffic totals or the traffic between ports; however, some counts may not be accurate when subtotaled by vessel. See page 31 for a more detailed discussion.

## REGIONAL TRAFFIC BY MONTH

The graphs in this section provide a visual summary of the traffic data collected from the Passenger and Vehicle Traffic Summaries by Month and within each region. The steep bell curves display the seasonal nature of AMHS traffic, a pattern that is repeated consistently from year to year. The similarity in the curves shows that the ratio of passengers and vehicles remains relatively constant. The Monthly Traffic Route Comparison charts separate out the feeder routes. Feeder routes include passenger and vehicle traffic on all vessels in Southeast except Mainline vessels. Feeder vessels include the M/V Lituya, the M/V LeConte, the M/V Fairweather, the M/V Taku and M/V Aurora operating in Southeast.

This page intentionally left blank.

## TRAFFIC BY TARIFF CODE

The Alaska Marine Highway System does not collect demographic information on passengers or detailed vehicle information. The only information available on passengers and vehicle characteristics is that which is required to determine the proper tariff and meet SOLAS requirements. Therefore, tariff information should be viewed only as a superficial indicator of travel trends. These categories refer only to those who qualified for the tariff rates which are based on season, route, and other limiting factors. Another example is the number of "adults" traveling at the group rate. Many of these travelers over 12 years of age were students on school-sponsored trips.

Cardeck space is predominantly sold by vehicle length. However, some consideration must be given to width, to the overall weight of the vehicle traffic on the cardeck, and to the effect of vehicle placement on the vessel's overall stability. Consequently, vehicle tariffs are classified as Standard (up to 8-1/2' wide), Wide (up to 9' wide), Extra Wide (over 9' wide), and Vans. In 2005, vehicles of standard width, including RV's, comprised over 94.3% of the motorized car deck traffic.

Due to their height and weight, vans must be categorized separately. Vans are defined as vehicles, normally commercial, and from 12'-13' in height with enclosed cargo space. Vans can be any length and either self-propelled or towed. A flatbed or stakebed truck or trailer, with a load higher than 10 feet from the ground, is also considered a van. Vans accounted for 5.9% of the motorized car deck traffic, but over 7.4% of the total linear feet used.

Recreational vehicles are defined as truck/campers, camper vans, motorhomes, and vehicles with trailers. Although RVs are identified with a separate tariff, they are also classified by width. In the first table below, the RV traffic is broken out by width. Recreational vehicles of all widths made up 5.4% of the total motorized cardeck traffic, and 7.4% of the linear feet. In addition, 1,850 non-motorized forms of transport were ticketed. These "Alternate Means of Conveyance" include bicycles, kayaks and canoes that are not being transported in a car, truck or trailer. More than 6,500 vehicles, including most of the commercial vans, sailed unaccompanied by a driver. Another tariff number that has no impact on actual traffic but is always of interest, are the 7,861 pets, confined to the car deck, that traveled by ferry in 2005. This category includes all animals, from livestock on its way to a 4-H show, to dogs and cats traveling on vacation with their owners.

### Car Deck Usage by Width and Size

## SEASONAL SAILINGS BY ROUTE AND VESSEL

### Description of the Sailings Tables

The following three tables of sailings shows the sequence of ports traveled by AMHS vessels during 2005, and the number of times each different sequence occurred. Of the 1,941 Southeast sailings, 96 different routes are represented, and of these, 32 occur only one or two times. In the combined Southwest and Cross Gulf systems there where 789 sailings that occurred, 36 of the 69 different routes saw only occasional use. It is also noteworthy that many of the routes are minor variations of a standard pattern. Sometimes a vessel is rerouted to accommodate a special event, or a schedule change is needed for an unexpected mechanical repair. Seasonal transitions also account for these variations. Excursion trips, identified in this report as EXC are another type of infrequent sailing. HTL is the code for when a vessel supplied hotel service to a port.

Seasonal demand and vessel availability both affect regularly-scheduled routes. The summer season includes the months from May through September, and the winter season includes the months January through April and October through December. Of the 296 different Southeast routes, 44 were scheduled in both summer and winter, 60 were summer-only, and 74 were winter-only. Of the 69 Southwest/Cross Gulf routes, 16 occurred year-round, 14 were scheduled only during the summer, and 39 were winter-only. But when the numbers of sailings are examined, the summer season, while shorter, comprises 59% of the 789 Southwest sailings and 53% of the 1941 Southeast sailings.

## REGIONAL TRAFFIC BY MONTH AND PORT

### Description of the Regional Traffic Tables

The data contained in the traffic tables comes from standard reports generated from the AMHS Reservations Management System (RMSIII). Following is a brief explanation of the terms used, and a description of the reports.

A "passenger" is any individual who got on or off the vessel, including drivers, infants, partial-fare travelers, and anyone traveling on a pass.

A "vehicle" is any passenger or cargo conveyance transported on the vessel, including construction equipment, container vans, motorcycles, unaccompanied cars shipped by dealers, and employee cars traveling on a space available basis. The vehicle count is not related to size; i.e. a 40-foot van is counted as one vehicle as is a 15-foot compact car.

The count of passengers, vehicles and cabins is derived from reservation information for specific vessels. A traveler who must transfer vessels to reach a destination or who is traveling on vacation and stopping to visit several communities is counted more than once. For example, a traveler from Pelican to Bellingham will show up in the passenger count as one who embarked at Pelican and disembarked at Juneau. This person will also be counted as one who embarked at Juneau and disembarked at Bellingham.

These tables provide the monthly total of embarking and disembarking passengers and vehicles by port. This summary gives an overview of seasonal travel trends, and allows the reader to easily identify the busiest and slowest ports and travel months. Information is provided for the total system by geographic area and by vessel.

## Monthly Traffic of Southeast Passengers

| PORT                           | JANUARY       | FEBUARY      | MARCH         | APRIL         | MAY           | JUNE          | JULY          | AUGUST        | SEPTEMBER     | OCTOBER       | NOVEMBER      | DECEMBER      | TOTAL          |

## REGIONAL PORT TO PORT TRAFFIC (ON / OFF)

### Description of the Port To Port Traffic Tables

These tables summarize inter-port passenger and vehicle traffic. They provide origin-destination information for analyzing through-traffic movements on the vessels. Information is provided for the total system for the year by geographic area (Southeast, Southwest, and Cross-Gulf) and by vessel. The report also includes summary tables for the summer season. These On/Off tables do not reflect the origin-destination of passengers and vehicles that transferred to another vessel. They show where all of the traffic that boarded a vessel at each port traveled to on that particular vessel. These tables are directional. Reading down the left column, then right, indicates the number of passengers embarking in the city in the left column, and disembarking in the corresponding city in the top row. Conversely, reading across the top row, then down, indicates the passengers disembarking in the city in the top row, and embarking in the corresponding city in the left row.

## REGIONAL LINK VOLUME SUMMARY

### Description of the Link Volume Summary Reports

The link volume summary reports are used to establish a measure of capacity utilized relative to the capacity provided. This report shows the traffic and capacity on each "link" of the system. A "link" is defined as a departure from one port and an arrival at the next. A complete trip usually consists of several links. For example, a passenger going from Juneau to Skagway in one trip would typically travel on two links "Juneau to Haines" and "Haines to Skagway." This passenger would be counted as one on each of these links. Consequently, the link volume count includes both the through-traffic and the traffic embarking from the first port in the link pair.

The link volume for each pair of ports is directional, with the port of origin appearing first. The link volume for "Bellingham-Ketchikan" indicates the total traffic northbound between Bellingham and Ketchikan with no intermediate stops. Cross-gulf links are included in the region of the departure port; i.e. Juneau-Valdez is listed in the report for southeast.

Link volume data is provided by geographic area and by vessel. Passenger and vehicle counts, total passenger and vehicle miles for each link, and capacity ratios for both passengers and vehicles are reported. Number of trips, trip length, and total miles for each link are also shown.

Monthly Link Volume Tables are provided by region. In these tables, only total counts are provided for passengers, vehicles, and trips by month.

The link volume data is useful because of the finite capacity of the vessels and the variation in size from vessel to vessel. One hundred and twenty-five passengers on the M/V Aurora traveling from Petersburg to Kake would have the same passenger link volume capacity ratio, 50%, as 225 passengers traveling on the M/V Taku. Where the link volume ratios are high, this is an indication that additional service may be warranted.

The link length in the table is given in nautical miles. (Statute miles for each link are shown on the diagrammatic maps). The "vessel miles" is the total number of nautical miles traveled over each link during the year, and is determined by multiplying the number of trips by the link length.

**Passenger capacity:** As the Vessel Information Table on page 5 shows, each vessel not only has functional booking limits, but also has a maximum capacity as authorized by the U.S. Coast Guard. Furthermore, both categories can be different for the summer and winter seasons. While the AMHS occasionally increases the capacity on "full" sailings to accommodate additional passengers, it never goes beyond the U.S.C.G. limit.

The 2005 report, following the example set with the 1996 report and continued since then, uses the functional booking limit set for each sailing to calculate capacity ratios. Prior year reports used a number closer to the U.S.C.G. limit. This change results in a higher capacity ratio on most links, but more accurately reflects the percentage of usable passenger space.

**Vehicle Capacity:** This report continues to use linear feet to measure vehicle capacity. Vehicle capacity ratios are calculated by dividing the total linear feet sold on the car deck by the vehicle capacity in linear feet. The capacities used in the 1994 and 1995 reports were based on an analysis of fiscal year 1994 sailings. For the 1996 and subsequent reports, the vehicle capacity used has been changed to reflect the amount of space used for booking purposes.

The actual amount of "saleable" space on the car deck depends on the amount of open space between vehicles, needed for maneuvering vehicles on the car deck, and for pathways for people entering or exiting their vehicles. The mix of vehicles can affect this non-saleable space, as well as the number of vans being carried.

Prior to 1994, the vehicle car deck capacity was defined as one vehicle per twenty foot length with a lane width of eight feet. The total number of 20' x 8' lengths on the car deck was the "vehicle capacity." The actual number of vehicles on the car deck was divided by the "vehicle capacity" to obtain the vehicle capacity ratio.

This methodology inaccurately reported the vehicle capacity ratio. When comparing multi-year data it is important to note the differences in vehicle capacity ratio calculations or the results will indicate an artificial change. The number of vehicles per link and the number of trips per link can be used to evaluate whether increases or decreases in link volume capacity ratios are significant or just reflect a change in the methodology.

## Southwest Alaska Annual Link Volume

## STATEROOM USAGE

### Description of the Stateroom Usage Tables

These reports focus on stateroom usage and are similar to the Link Volume Summary Reports of Passengers and Vehicles. They show the percent of cabins used on each link and are reported by geographic region and vessel. Regional reports of stateroom usage are displayed alphabetically by embarking port and by capacity ratio. Individual vessel tables provide the link volume ratio by month. Of the eleven vessels in the AMHS fleet, six have staterooms: the M/V Columbia, the M/V Kennicott, the M/V Taku, the M/V Malaspina, the M/V Matanuska, and the M/V Tustumena.

### 2000 to 2005 Traffic Data Sources

The year 2000 through 2005 Annual Traffic Volume Reports are based on counts from issued tickets. Years prior to 2000 were based on counts from used tickets. Issued ticket data is pre-sailing data, and used ticket data is post-sailing data..

#### M/V Columbia Staterooms (104 Staterooms)
