Introduction

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

Alaska Marine Highway System

The Alaska Marine Highway System (AMHS) serves 33 Alaska ports by transporting passengers and vehicles between coastal communities. This service helps meet the social, educational, health and economic needs of Alaskans.

AMHS provides year-round scheduled ferry service throughout Southeast and Southwest Alaska, extending south to Prince Rupert, British Columbia and Bellingham, Washington. The system connects communities with each other, regional centers, and the continental road system. It is an integral part of Alaska's highway system, reaching many communities that would otherwise be cut off from the rest of the state and nation. AMHS also provides a coastal transportation alternative between Anchorage and the "Lower 48" states versus driving the Alaska Highway.

AMHS is designed to provide basic transportation services to these communities—transportation that allows community access to health services, commodities, legal services, government services, and social services; transportation that meets the social needs of isolated communities; and transportation that provides a base for economic development.

Service and Amenities

AMHS service is divided into two major systems: the Southeast System (from Bellingham north to Yakutat) and the Southwest System (from Cordova west to Unalaska / Dutch Harbor). The Alaska Marine Highway fleet consists of eleven vessels; 7 operate in the Southeast System and 4 operate in the Southwest System. All eleven vessels are designed to carry passengers and vehicles ranging in size from motorcycles to large freight container vans.

Trips on AMHS can last several hours or several days, so passenger services are an important aspect of the state's transportation service. Most vessels provide food service, shower facilities, observation lounges, and recliner lounges. The larger vessels provide additional amenities, including play areas for children. Six vessels have stateroom accommodations for overnight travel, or for passengers who want a space they can call their own while traveling.

Freight Transport

One regular use of AMHS is the year-round shipment of container vans. These vans transport time-sensitive cargo such as fresh vegetables, meat, and dairy products from Bellingham and regional Alaska centers to communities served by the system. Local restaurants, grocery stores, individuals, and food distribution businesses have established delivery schedules with AMHS to ensure regular and continuous delivery of perishable goods. Shipping perishable supplies on AMHS is more cost-effective than air freight, and in many cases ensures delivery to communities on a more frequent basis than commercial barge and freight lines. Vans are also used to move fresh Alaska fish and seafood to markets, and to transport U.S. mail and household goods.

Planned Service Reductions

During the fall, winter and spring months, all vessels are scheduled for annual maintenance. This normally requires a six to eight week lay-up period per ship that results in reduced service. Major projects to refurbish the vessels and to keep them in compliance with SOLAS (Safety of Life at Sea) requirements also keep vessels out of service. Vessels are put into lay-up during periods of low traffic demand, or as a means to reduce operating costs. During 2013, each AMHS vessel was out of service for maintenance, project work, or lay-up status. Please refer to page 7 for a full operating schedule.

Comparisons to Previous Years

For the years 2000 through 2013, counts are based on tickets that were issued for the sailings. This method should not affect the traffic totals or the traffic between ports when compared to previous years; however, some counts may not be accurate when subtotaled by vessel. Furthermore, the following points should be considered:

- Care must be taken when comparing the traffic data to 1997. A fishermen's blockade of the M/V Malaspina on July 19, 1997 resulted in a 138-day suspension of service to the Canadian port of Prince Rupert. Limited service was restored December 4th, with one trip per week by the M/V Aurora. The disruption had a major impact on AMHS traffic.

- In January 2002, AMHS discontinued regular service to Hollis when the Inter-Island Ferry Authority's M/V Prince of Wales began service between Ketchikan and Hollis. The impact of discontinuing regular Hollis service can be seen when comparing previous years for Hollis and Ketchikan. While AMHS does not officially serve Hollis any longer, backup support for the Inter-Island Ferry Authority may be provided as needed.
- Prior to 2003, Yakutat traffic was included in the Southwest Region. From 2003 forward, Yakutat traffic has been reported in the Southeast Region.
- On September 29th, 2005 service to Seward was discontinued. However, overall cross-gulf traffic was not impacted because Seward traffic was re-routed to Whittier.
- On June 9th, 2006 the M/V LeConte ceased operations as a 24/7 vessel and was converted to day boat status. Consequently, statistics for the M/V LeConte will reflect that change in status.
- During 2009 the M/V Tustumena provided only one trip per month down the Aleutian Chain.
- During 2013, service in the Southwest region was severely impacted by delays in the M/V Tustumena's annual maintenance project. Limited summer service from Homer to Kodiak and the Aleutian Chain was provided by the M/V Kennicott. The M/V Kennicott also provided supplemental service to Prince William Sound in 2013, along with the M/V Aurora and FVF Chenega in the summer.
- In July 2013, service to Metlakatla was discontinued from Port Chester and began from the new Annette Bay terminal. Therefore, traffic will be split on the charts for Metlakatla.

Southwest Alaska Routes

The Southwest system serves Prince William Sound, Kodiak Island, the Kenai Peninsula, and the Aleutian Islands. The M/V Tustumena provides regular service between Kodiak, Port Lions, Seldovia and Homer. The Aleutian Chain trip is not made in the winter because of adverse weather conditions.

Tourist passengers add a significant percentage to Prince William Sound traffic in the summer, especially between Valdez and Whittier. The economy began to realize gains in the travel market in 2010, which were then realized in overall ridership of the Alaska Marine Highway System. Prince William Sound traffic has remained strong after a peak in 2011. The Southwest routes connect to the continental road system at Valdez, Whittier, and Homer, Alaska.

Cross-Gulf Service

When the M/V Kennicott, a vessel certified to operate in open waters, joined the fleet in summer 1998 the ferry system expanded to include regular cross-gulf sailings. These sailings connect Southeast Alaska with the South Central and Southwest regions of the state. In 2013, the M/V Kennicott operated on a full-time basis. All cross-gulf trips include a stop at the port of Yakutat, a community that is unique in that it is served only on the cross-gulf route.

Southeast Alaska Routes

The Southeast AMHS route system is divided into two subsystems: the "mainline" routes which typically take more than one day for the ship to travel; and shorter routes where the vessels depart their home port in the morning, travel to destination ports and then return to their home port on the same day. The shorter routes are commonly referred to as "day boat" routes.

The mainline routes carry a high percentage of tourists and vehicles in the summer, and provide service between Bellingham, Washington or Prince Rupert, British Columbia and Skagway or Haines, Alaska. Along the way, the ships stop in Ketchikan, Wrangell, Petersburg, Sitka, Juneau, and Haines. Although Kake and Hoonah are smaller communities, they are also served by certain mainline sailings.

During 2013, four out of the five largest AMHS vessels were used on the Southeast mainline routes. These were the M/V Columbia, M/V Kennicott, M/V Matanuska, and M/V Taku. Day boat service was also provided on the North Lynn Canal route during the peak summer season by M/V Malaspina. This route provides round-trip service between Juneau, Haines and Skagway.

The day boat routes connect the smaller communities of Southeast Alaska with each other and with the Southeast Alaska mainline communities (Ketchikan, Petersburg, Wrangell, Sitka, Juneau, Haines and Skagway) that serve as regional centers for commerce, government, health services, and/or connections to other transportation systems. The day boat routes primarily serve local residents, and include Angoon, Gustavus, Hoonah, Kake, Metlakatla, Pelican, and Tenakee.

In 2013, there were five AMHS vessels that provided service on the day boat routes. These were the M/V Chenega, M/V LeConte, the M/V Fairweather and the M/V Lituya and in the summer, M/V Malaspina. The M/V Lituya is dedicated to providing day boat service between Ketchikan and Metlakatla.

The Southeast system connects with the continental road system at Bellingham, Washington, Prince Rupert, British Columbia, and in Alaska at Haines and Skagway.

Historical Traffic

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

Source: Annual Traffic Volume Reports (Link Volume Summary Reports). Percentage change is calculated from the prior year and all traffic is included with the exception of excursion trip passenger traffic. For 1998 through 2004, excursion trips were offered. 2013 marked the 50th anniversary of AMHS and as part of the celebration, two excursion trips were offered: one to Misty Fjords and one to Tracy Arm.

Current Annual Traffic

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

The tables and charts in this section provide a visual summary of the traffic data collected from the Passenger and Vehicle Traffic Summaries by Month; this traffic is shown both by region and by types of vessels (as described below).

The Regional Monthly Traffic tables and charts on page 26 break the traffic down by region, utilizing passenger and vehicle counts to / from ports in the Southeast Region, and then counts to / from ports in the Southwest Region. The steep bell curves display the seasonal nature of AMHS traffic, a pattern that is repeated consistently from year to year.

The Vessel Monthly Traffic tables and charts on page 27 are broken down by three general vessel types. The Southeast vessels are the mainline vessels sailing the long haul routes in the Southeast Panhandle area and include the M/V Columbia, M/V Kennicott, M/V Malaspina, M/V Matanuska and M/V Taku. The Southwest vessels include the M/V Aurora and M/V Tustumena. The Day Boat vessels in Southeast include the M/V Lituya, M/V LeConte, M/V Fairweather and M/V Malaspina during the peak summer season as well as the M/V Chenega in the Southwest Region. Please see page 5 for a detailed explanation of these vessel types.

Regional Monthly Traffic

Tariff Traffic

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

Car deck space is predominantly sold by vehicle length. However, some consideration must be given to width, to the overall weight of the vehicle traffic on the car deck, and to the affect of vehicle placement on the vessel's overall stability. Consequently, vehicle tariffs are classified as Standard (up to 8-1/2' wide), Wide (up to 9' wide), Extra Wide (over 9' wide), and Vans. Due to their height and weight, vans must be categorized separately. Vans are defined as vehicles, normally commercial, from 12'-13' in height with enclosed cargo space. Vans can be any length and either self-propelled or towed. A flatbed truck or trailer, with a load higher than 10 feet from the ground, is also considered a van.

In 2012 new tariffs were created for the communities of Ouzinkie and Old Harbor, the newest communities to receive ferry service. With the addition of new tariffs in 2011 for the roadless communities of Tenakee and Akutan, tariffs for roll-on / roll-off trailers, hand carts and ATV's are now accounted for separately in the second table on page 30 under Car Deck Tariff Usage.

Recreational vehicles are defined as truck / campers, camper vans, motorhomes, and vehicles with trailers. Although RVs are identified with a separate class, they are also classified by width. In the first table, the RV traffic is broken out by width. Recreational vehicles of all widths made up 3.82% of the total motorized cardeck traffic. In addition, 2,303 non-motorized forms of transport were ticketed. Non-motorized traffic includes bicycles, kayaks and canoes that are not being transported in a car, truck or trailer. Another tariff number that has no impact on actual traffic but is always of interest, are the pets, confined to the car deck, this category includes all animals.

The pie charts on pages 32 and 33 present the length of various types of vehicles measured in feet. The labels for each slice in each pie chart represent the upper limit of the category size. For example, in the Car Length Chart on page 32, the pie slice labeled 15' is to be read as "cars larger than 10 feet up to and including 15 feet." The next slice is to be read as "cars larger than 15 feet up to and including 19 feet."

Sailings

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

The following three tables represent sailings that show the sequence of ports traveled by AMHS vessels during 2013, and the number of times each different sequence occurred. The data is broken into summer and winter seasons, summer being the time period from May 1 to September 30. Of the 2,650 Southeast sailings, 42 different routes are represented, and of these, 11 occur only one or two times. In the combined Southwest and Cross Gulf systems, there were 1,032 sailings that occurred with 14 of the 37 different routes seeing only occasional use. It is also noteworthy that many of the routes are minor variations of a standard pattern. Published schedule variations may occur due to seasonal transitions, rerouting a vessel to accommodate a special event or accomodating for an unexpected mechanical repair.

Monthly Port Traffic

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

The data in the traffic tables is generated by the AMHS Reservations Management System (RMSIII) through a standard reporting process. The following is a brief explanation of the terms used and a description of the reports.

A "passenger" is any individual who got on or off the vessel, including drivers, infants, partial-fare travelers, and anyone traveling on a pass.

A "vehicle" is any passenger or cargo conveyance transported on the vessel, including construction equipment, container vans, motorcycles, unaccompanied cars shipped by dealers, and employee cars traveling on a space available basis. The vehicle count is not related to size; i.e. a 40-foot van is counted as one vehicle, as is a 15-foot compact car.

The count of passengers, vehicles and cabins is derived from reservation information for specific vessels. A traveler who must transfer vessels to reach a destination or who is traveling on vacation and stopping to visit several communities is counted more than once. For example, a traveler from Pelican to Bellingham will show up in the passenger count as one who embarked at Pelican and disembarked at Juneau. This person will also be counted as one who embarked at Juneau and disembarked at Bellingham.

These tables provide the monthly total of embarking and disembarking passengers and vehicles by port. This summary gives an overview of seasonal travel trends, and allows the reader to easily identify the busiest and slowest ports and travel months. Information is provided for the total system by geographic area and by vessel.

Note that the quantity of passengers and vehicles embarking and disembarking in the regional charts presented on pages 44-47 do not match due to the fact that the M/V Kennicott loads or off-loads passengers and vehicles in both the Southeast and Southwest regions. For example, when a passenger embarks in Ketchikan (Southeast) and disembarks at Whittier (Southwest), the actions are recorded and reported in the appropriate region.

Port to Port Traffic (On / Off)

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

These tables summarize inter-port passenger and vehicle traffic. They provide origin-destination information for analyzing through-traffic movements on the vessels. Information is provided for the total system for the year by geographic area (Southeast, Southwest, and Cross-Gulf) and by vessel. The report also includes summary tables for the summer season. These On / Off tables do not reflect the origin-destination of passengers and vehicles that transferred to another vessel. They show where the traffic boarded the vessel and then traveled to, by port, for that particular vessel.

Link Volume Summary

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

The link volume summary reports are used to establish a measure of capacity utilized, relative to the capacity provided. The reports show the traffic and capacity on each “link” of the system. A “link” is defined as a departure from one port and an arrival at the next. A complete trip usually consists of several links. For example, a passenger going from Juneau to Skagway in one trip would typically travel on two links “Juneau to Haines” and “Haines to Skagway.” This passenger would be counted as one on each of these links. Consequently, the link volume count includes both the through-traffic and the traffic embarking from the first port in the link pair.

The link volume for each pair of ports is directional, with the port of origin appearing first. The link volume for “Bellingham-Ketchikan” indicates the total traffic northbound between Bellingham and Ketchikan with no intermediate stops. Cross-gulf links are listed in a separate table named “Cross-Gulf Link Volume.”

Link volume data is provided by geographic area and by vessel. Reported information includes a passenger and vehicle count, total passenger and total vehicle miles for each link, the capacity ratios for both passengers and vehicles, the number of trips, trip length, and total miles of each link. Furthermore, monthly Link Volume Tables are provided by region. In these tables, only total counts for passengers, vehicles, and trips by month are provided.

The link volume data is useful because of the finite capacity of the vessels and the variation in size from vessel to vessel. One hundred and twenty-five passengers on the M/V Aurora traveling from Petersburg to Kake would have the same passenger link volume capacity ratio, 50%, as 225 passengers traveling on the M/V Taku. High link volume ratios indicate that additional service may be warranted.

The link length in the table is given in nautical miles. Statute miles for each link are shown on the diagrammatic maps located on pages 106 and 107. The “vessel miles” are the total number of nautical miles traveled over each link during the year, and are determined by multiplying the number of trips by the link length.

Passenger Capacity

As the Vessel Information Table on page 6 shows, each vessel not only has functional booking limits, but also has a maximum capacity as authorized by the U.S. Coast Guard. Furthermore, both categories can be different for the summer and winter seasons. For example, AMHS occasionally increases the capacity on “full” sailings to accommodate additional passengers, but it never goes beyond the U.S.C.G. limit.

Following the example set in 1996, the functional booking limit for each sailing is used to calculate capacity ratios for the 2013 report. Prior to 1996, reports used a number closer to the U.S.C.G. limit. This change results in a higher capacity ratio on most links, but more accurately reflects the percentage of usable passenger space.

Vehicle Capacity

This report continues to use linear feet to measure vehicle capacity. Vehicle capacity ratios are calculated by dividing the total linear feet sold on the car deck by the vehicle capacity in linear feet. The capacities used in the 1994 and 1995 reports were based on an analysis of fiscal year 1994 sailings. For the 1996 and subsequent reports, the vehicle capacity used has been changed to reflect the amount of space used for booking purposes.

The actual amount of “sellable” space on the car deck depends on the amount of open space between vehicles, needed for maneuvering vehicles on the car deck, and for pathways for people entering or exiting their vehicles. The mix of vehicles can affect this non-sellable space, as well as the number of vans being carried.

When comparing multi-year data, it is important to note the differences in vehicle capacity ratio calculations or the results will indicate an artificial change. The number of vehicles per link and the number of trips per link can be used to evaluate whether increases or decreases in link volume capacity ratios are significant or just reflect a change in the methodology.

Southeast Alaska Link Volume

Stateroom Usage

Alaska Marine Highway System, Annual Traffic Volume Report • 2013

These reports focus on stateroom usage and are similar to the Link Volume Summary Reports of Passengers and Vehicles. They show the percentage of cabins used on each link and are reported by geographic region and vessel. Regional reports of stateroom usage are displayed alphabetically by embarking port and capacity ratio. Individual vessel tables provide the link volume ratio by month. Of the eleven vessels in the AMHS fleet, six have staterooms: the M/V Columbia, the M/V Kennicott, the M/V Taku, the M/V Malaspina, the M/V Matanuska, and the M/V Tustumena. Please note that there are no stateroom sales on the M/V Malaspina in the summer.

The years 2000 through 2013 Annual Traffic Volume Reports are based on counts from issued tickets (pre-sailing data). Years prior to 2000 were based on counts from used tickets (post-sailing data).
