Summary

- AHFC mailed the Winter 2005 Homeless Survey to 142 agencies throughout Alaska. Eight five surveys were returned, marking the highest rate of participation since the survey was started.
- Homeless surveys were returned from thirty-eight Alaskan communities. Twenty-nine of these communities had response rates higher than 50%. The greatest increase in participation was witnessed in the communities of Homer and Kenai which mobilized local efforts to maximize survey participation.
- The total number of homeless has increased by approximately 33% from last year's survey. This increase does not appear to be solely related to changes in participation which would have resulted in a decrease in homeless reported. These changes appear to be a result of colder weather during this year's homeless survey, compared to last year. For example, three major homeless providers (Beans Cafe, Brother Francis Shelter, and Safe Harbor) in Anchorage reported significant increases in homeless during the date of the survey, which was also during the coldest day of the year.
- The number of chronic homeless reported in Anchorage (462 - Winter 2005, 364 - Winter 2004), and the Rest of State increased (214 - Winter 2005, 262 - Winter 2004). Outside of Anchorage, the bulk of the increase occurred in Juneau, where emergency shelters, specifically, the Glory Hole, targeted this subpopulation for the survey. Overall, the trend percentage of chronic homeless continues to trend upward, from 11% to 16%.
- The number of individuals, small families, and large families increased from last year's survey. However, the percentage representation these groups has changed only slightly. The most noticeable increase occurred with families with children, which has trended upward by approximately 2%.

Introduction

The Homeless Service is a “point-in-time enumeration” completed by service providers semiannually on a predetermined day. The purpose of the survey is to gather demographic information on the homeless who receive services from particular homeless agencies at “any given point in time.”

The Homeless Service Providers Survey defines homelessness based on standard established by the Department of Housing and Urban Development and the Alaska Housing Finance Corporation. For the purposes of this survey, the definition of “homeless” includes:

- *Any individual who lacks a fixed, regular, and adequate nighttime residence or has a primary nighttime residence in any facility not designed for permanent living;*
- *Families, individuals, and youth residing in emergency shelter or transitional housing;*
- *Persons in drug and alcohol treatment who were homeless before they entered treatment or will be homeless after they leave treatment;*
- *Family members wait-listed for public housing that are currently residing in substandard or overcrowded housing;*
- *An individual in any of the above places but is spending a short time (up to 30 consecutive days) in a hospital or other institution; and/or*
- *An individual who is being discharged within a week from an institution, such as a mental health or substance abuse treatment facility or a jail/prison, in which the person has been a resident for more than 30 consecutive days and no subsequent residence has been identified and the person lacks the resources and support networks needed to obtain housing.*

Limitations

Please note that homeless surveys attempt to define a segment of the population that is dynamic and not easily identified or understood. There are many factors that generally limit the validity of such studies. Users of homeless surveys need to carefully examine the work done and consider the following limitations of all homeless research. **The results of the survey are not intended to represent the entire homeless population and the reader is cautioned against making such generalizations.** Please note that the results of this survey, as well as other homeless surveys, are generally limited by a variety of factors including:

1) Self-report:

Homeless surveys depend on self-disclosure and assume that people are comfortable in reporting self-characteristics that may be perceived as socially undesirable, such as mental illness or substance abuse.

2) Overestimation

Homeless surveys can overcount the number of homeless seeking services by not considering or controlling for duplication within and across agencies. This survey attempts to control for overestimation by removing, when possible, duplicates. Duplicates are identified using social security number, client name, community, age, and gender. When these variables are incomplete or not available, additional variables may be used to identify duplicates.

3) Generalizing to the Entire Homeless Population

Homeless surveys often attempt to make generalizations about the entire population from limited samples of shelters and food kitchens. It is important to note that homeless may also be found in motels, libraries, cars, parks, or other nontraditional locations.

4) Rural Factors

It is important to point out that there are pronounced differences between urban and rural areas when it comes to homelessness. While urban communities often have shelters, day centers, and food kitchens for the homeless, rural communities may lack these facilities. The absence of these facilities can result in reports which may incorrectly conclude that rural areas do not have a homeless problem. A rural community often relies on non-traditional shelter arrangements to take care of the homeless. Many persons in rural areas without a home may board with friends or relatives in substandard or overcrowded housing.

Method

Data Collection

Survey respondents were asked to complete the Winter 2005 survey on January 26th, 2005 or another day during the week that provided the best “point-in-time” representation of clients they serve. This change was initiated because a significant number of homeless agencies are only open one day of the week and often were not able to participate in the survey. The change in methodology now means that the survey is using a 7-day period as the basis of comparison rather than a specific day. This homeless survey may not compare directly with prior Homeless Service Provider Surveys’. The reader is cautioned to keep this in mind when comparing prior survey data. It is expected, however, that the change in method will provide a more accurate demographic profile of the homeless, chiefly because a larger number of homeless agencies are able to provide data on the people they serve.

Data Analysis

Data gathered from homeless agencies are entered into a database and subjected to a missing case and duplicate analysis. **Duplicates across homeless agencies for the specific survey are excluded** from the trends and patterns reported in this survey. However, duplicates with prior surveys are included and analyzed to identify the differences between infrequent users of homeless services vs. frequent users.

Data collected over the last seven years indicate fundamental differences between Winter and Summer surveys with respect to agency participation and the demographics of the homeless reported. Because of these factors, Winter survey trends are derived only from Winter survey data whereas Summer survey trends are derived only from Summer survey data.

The constantly changing nature of homeless agency participation in the Homeless Service Providers’ Survey results in demographic statistics that are extremely variable. This is especially the case in rural Alaska where just one agency can significantly change the demographic profile of the homeless. Because of this, percentages are calculated by averaging all available data points. This approach, a moving average, provides a clearer picture of the long-term trends in the homeless population.

TABLES
Winter Homeless Survey Data
1996 - 2005
